Analytical Report
(0311-50)

EPA Method 18 Bags
Ethylene oxide

Enthalpy Analytical, Inc.

Phone: (919) 850 - 4392 / Fax: (919) 850 - 9012 / www.enthalpy.com
2202 Ellis Road Durham, NC 27703 - 5518

I certify that to the best of my knowledge all analytical data presented in this report:

- Have been checked for completeness
- Are accurate, error-free, and legible
- Have been conducted in accordance with approved protocol, and that all deviations and analytical problems are summarized in the appropriate narrative(s)

This analytical report was prepared in Portable Document Format (.PDF) and contains -' pages.

Report Issued: \$' /%\$/&\$%%

Narrative Summary

Enthalpy Analytical Narrative Summary

Company	Tetra Tech, Inc.
Analyst	JBB
Parameters	EPA Method 18 Bags

Custody	James Beach received the samples on 3/8/11 after being relinquished by Tetra Tech, Inc. The samples were received at ambient temperature in good condition. The sample A05-Hoss-030811 MB was received empty. Prior to, during, and after analysis, the samples were kept under lock with access only to authorized personnel by Enthalpy Analytical, Inc.
Analysis	<p>The samples were analyzed for ethylene oxide (EO) using the analytical procedures in EPA Method 18, Measurement of Gaseous Organic Compound Emissions by Gas Chromatography (40 CFR Part 60, Appendix A).</p> <p>The standards and samples were analyzed following the procedures specified in section 8.2.1, Integrated Bag Sampling and Analysis.</p> <p>All samples and standards were introduced directly to the column using an automated multi-port Valco gas sampling valve equipped with a stainless steel loop. EO was referenced to certified gas phase standards.</p> <p>Bag sample A05-Hoss-030811 MB was filled with house nitrogen prior to analysis as it was received empty and was designated as a blank.</p> <p>The Agilent Technologies Model 7890A, Gas Chromatograph ("Edith" CN10722006) was equipped with a Flame Ionization Detector and a Restek Rtx-1 30m x 0.32mm x 4.0um column (S/N 920171).</p>
Calibration	<p>The calibration curves are located in the back of this report and referenced in the Analysis Method column on the Detailed Results page.</p> <p>For each calibration curve used, the first page of the curve contains all method specific parameters (i.e., curve type, origin, weight, etc.) used to quantify the samples. The calibration curve section also includes a table with the Retention Time (RetTime), Level (Lvl), Amount (corresponding units), Area, Response Factor (Amt/Area) and the analyte Name. The calibration table is used to identify (by retention time) and quantify each target compound.</p>
Chromatographic Conditions	The acquisition methods gc117p73.M and gc117p56.M are included in the Calibration Curve Chromatograms section of this report.

Enthalpy Analytical Narrative Summary

(continued)

QC Notes	No recovery study was performed and no adjustments to the results were made. These results are intended for engineering purposes only. All sample preparation and analytical holding times specified in the method were met.
Reporting Notes	<p>The results presented in this report are representative of the samples as provided to the laboratory.</p> <p>These analytical results are reported on a wet basis. The user of this report should determine the % moisture in the sample and correct the reported value to ppmvd as appropriate.</p> <p>Enthalpy Analytical, Inc. is nationally accredited to perform Method 18 for compliance purposes by the Louisiana Department of Environmental Quality's Louisiana Environmental Laboratory Accreditation Program (LELAP), certificate number 04010.</p>

General Reporting Notes

The following are general reporting notes that are applicable to all Enthalpy Analytical, Inc. data reports, unless specifically noted otherwise.

- The acronym **MDL** represents the Minimum Detection Limit. Below this value the laboratory cannot determine the presence of the analyte of interest reliably.
- The acronym **LOQ** represents the Limit of Quantification. Below this value the laboratory cannot quantitate the analyte of interest within the criteria of the method.
- The acronym **ND** following a value indicates a non-detect or analytical result below the MDL.
- The letter **J** following a value indicates an analytical result between the MDL and the LOQ. A J flag indicates that the laboratory can positively identify the analyte of interest as present, but the value should be considered an estimate.
- The letter **E** following a value indicates an analytical result exceeding 100% of the highest calibration point. The associated value should be considered as an estimate.
- The acronym **DF** represents Dilution Factor. This number represents dilution of the sample during the preparation and/or analysis process. The analytical result taken from a laboratory instrument is multiplied by the DF to determine the final undiluted sample results.
- The addition of **MS** to the Sample ID represents a Matrix Spike. An aliquot of an actual sample is spiked with a known amount of analyte so that a percent recovery value can be determined. This shows what effect the sample matrix may have on the target analyte, i.e. whether or not anything in the sample matrix interferes with the analysis of the analyte(s).
- The addition of **MSD** to the Sample ID represents a Matrix Spike Duplicate. Prepared in the same manner as an MS, the use of duplicate matrix spikes allows further confirmation of laboratory quality by showing the consistency of results gained by performing the same steps multiple times.
- The addition of **LD** to the Sample ID represents a Laboratory Duplicate. The analyst prepares an additional aliquot of sample for testing and the results of the duplicate analysis are compared to the initial result. The result should have a difference value of within 10% of the initial result (if the results of the original analysis are greater than the LOQ).
- The addition of **AD** to the Sample ID represents an Alternate Dilution. The analyst prepares an additional aliquot at a different dilution factor (usually double the initial factor). This analysis helps confirm that no additional compound is present and coeluting or sharing absorbance with the analyte of interest, as they would have a different response/absorbance than the analyte of interest.
- The Sample ID **LCS** represents a Laboratory Control Sample. Clean matrix, similar to the client sample matrix, prepared and analyzed by the laboratory using the same reagents, spiking standards and procedures used for the client samples. The LCS is used to assess the control of the laboratory's analytical system. Whenever spikes are prepared for our client projects, two extra spikes are prepared. The extras (randomly chosen) are labeled with the associated project number and kept in-house at the appropriate temperature conditions. When the project samples are received for analysis, the LCSs are analyzed to confirm that the analyte could be recovered from the media, separate from the samples which were used on the project and which may have been affected by source matrix, sample collection and/or sample transport.

General Reporting Notes

(continued)

- **Significant Figures:** Where the reported value is much greater than unity (1.00) in the units expressed, the number is rounded to a whole number of units, rather than to 3 significant figures. For example, a value of 10,456.45 ug catch is rounded to 10,456 ug. There are five significant digits displayed, but no confidence should be placed on more than two significant digits.
- **Manual Integration:** The data systems used for processing will flag manually integrated peaks with an “M”. There are several reasons a peak may be manually integrated. These reasons will be identified by the following two letter designations. The peak was ***not integrated*** by the software “NI”, the peak was ***integrated incorrectly*** by the software “IP” or the ***wrong peak*** was integrated by the software “WP”. These codes will accompany the analyst’s manual integration stamp placed next to the compound name.

Calibration Table
=====
```

Calib. Data Modified : 3/9/2011 6:45:06 PM

Rel. Reference Window : 0.000 %
 Abs. Reference Window : 0.100 min
 Rel. Non-ref. Window : 0.000 %
 Abs. Non-ref. Window : 0.050 min
 Uncalibrated Peaks : not reported
 Partial Calibration : Yes, identified peaks are recalibrated
 Correct All Ret. Times: No, only for identified peaks

Curve Type : Linear
 Origin : Connected
 Weight : Quadratic (Amnt)

Recalibration Settings:
 Average Response : Average all calibrations
 Average Retention Time: Floating Average New 75%

Calibration Report Options :

Printout of recalibrations within a sequence:
 Calibration Table after Recalibration
 Normal Report after Recalibration
 If the sequence is done with bracketing:
 Results of first cycle (ending previous bracket)

Signal 1: FID1 A, FID1A, Front Signal
 Signal 2: FID3 B, FID3B, Back Signal

Certificate of Analysis

Customer:

Enthalpy Analytical, Inc.
2202 Ellis Road, Suite A
Durham, NC 27703-5518

Tel: (919) 850-4392

Cylinder Number CC105338
Cylinder Size/CGA: AL150/350
Fill Pressure: 2000 PSIA
Gas Volume: 3700 liters
Date of Mfg: 08/11/10
Expiration Date: 08/11/11

Customer Number	Ship VIA	Job No.	Customer PO	Mixture Type
00127703NC	Pick up	081110-002	C709KMCJCB	Gravimetric

NOTES: Blend Tolerance: +/-2%

Analytical Tolerance: +/-2%

Traceability: NIST by weight set / Internal Standards by analysis

Reactive Mixtures: Analyzed twice with required agreement between analyses of 2%.

Required wait time between analyses of >7 days.

Caution: Do not use below 150 PSIG.

Authorized Signature:

between and, see or
PSIG.

Joseph A. Ernst

*Every effort has been made to establish the actual concentration of the components using master gas blending technology however, Custom Gas Solutions shall have no liability in excess of the established charge for this material.
