

# Walton & Lonsbury Site

U.S. EPA | HAZARDOUS WASTE PROGRAM AT EPA NEW ENGLAND

## THE EMERGENCY RESPONSE AND REMOVAL PROGRAM

*responds to chemical, biological and radiological releases and large-scale national emergencies, including homeland security incidents. EPA conducts short term cleanups in the removal program when necessary to protect human health and the environment by either funding response actions directly or overseeing and enforcing actions conducted by potentially responsible parties.*

### BACKGROUND:

The Site at 78 North Avenue in Attleboro, MA once housed a 13,500 square foot chromium plating facility formerly operated by Walton & Lonsbury, Inc. (W&L). While in operation from 1940-2007, the Site was used to chrome-plate very large objects such as pistons for large hydraulic equipment or rollers for paper mills. For a time, copper plating operations also took place until the building was remodeled in the 1950s. A number of chemicals and chemical compounds were used and left as waste in the operations process. From 1940-1970, all wastes generated from the facility discharged into the wetlands located on the southern portion of the property via an underground pipe. After 1970, W&L used a number of different waste disposal techniques that also had environmental consequences on the Site.

### CONTAMINANTS OF CONCERN:

Contaminants of Concern on the Site include total chromium, hexavalent chromium, lead and Volatile Organic Compounds (VOCs). The chromium compounds resulted from the use of chromic acid to perform chrome plating in the plant. Lead is a contaminant of concern because it was used for a variety of operations in the plant including the making of plumbing pieces for the plating process.

### WHAT HAS BEEN COMPLETED:

Since work began on the Site, the Walton and Lonsbury facility has been demolished and contaminated debris has been transported off-site to licensed and regulated landfills for final disposal. During the building demolition phase, air monitoring devices were placed around the Site (throughout the neighborhood, playground, and Industrial Park), and at no point during the project were any elevated levels of dust or metals observed.

Excavation of contaminated soil behind the former plating facility began in March. The soil from this portion of the excavation is being stockpiled on the Site and EPA is working to analyze it for proper disposal. During the excavation, EPA has continued to deploy air monitoring

stations to monitor air quality around the Site. If the air monitors detect dust or contamination, work will be halted immediately until the problem is fixed.

### WHAT'S NEXT:

A detailed engineering plan for excavation and restoration of the impacted residential properties is currently being finalized by a team of highly qualified engineers, wetland specialists and hydrologists. This plan will be based upon the residential sampling event and results obtained last fall. This design is projected to be completed in July. Once the design is completed, the impacted residential areas will be prepared for excavation.

### ADDITIONAL CONTACTS:

Jeffrey Chormann, *Mass Department of Environmental Protection; Chief of the Assessment and Reporting Branch, Bureau of Waste Prevention*; (617) 292-5888; jeffrey.chormann@state.ma.us

Elsbeth N. Hearn, *EPA New England; On-Scene Coordinator*; (617) 918-1265

### PUBLIC MEETING:

Attleboro City Hall, June 22, 2011, 7:00 pm

### KEY CONTACTS:

#### ELISE JAKABHAZY

*EPA New England*

*On-Scene Coordinator*

(617) 918-1228

[jakabhazy.elise@epa.gov](mailto:jakabhazy.elise@epa.gov)

#### EMILY ZIMMERMAN

*EPA New England, Community Involvement Coordinator*

(617) 918-1037

[zimmerman.emily@epa.gov](mailto:zimmerman.emily@epa.gov)

### GENERAL INFO:

#### EPA NEW ENGLAND

5 Post Office Square  
Suite 100  
Boston, MA 02109-3912  
(617) 918-1111
