4. Site Activities

A. START-3 Activities

1. Progress Made: Air monitoring was conducted using a MultiRAE Plus, with an 11.7 electron volt (eV) probe, for monitoring percent oxygen, explosive atmospheres, and toxic and or organic vapors around the Site, around the warehouse, and Exclusion Zone prior to and during the operations. No oxygen deficient, enriched or otherwise harmful, explosive atmospheric gases or vapors were detected in the ambient air.

Maintained a site logbook, collected photo documentation of the site activities, and prepared the Daily Progress Report.

2. Problems Encountered: None at this time.

3. Anticipated Problems/Recommended Solutions: None at this time.

4. Health and Safety Problems/Recommended Solutions: None at this time.

B. ERRS Activities

1. Progress Made: Operations consisted of bulk liquid shipment and drum and tote resizing for disposal.

- Liquids from the above ground storage tank (AST) Tank #2 (liquids, bromine), and Tank #3 (flammables) were shipped off-Site in bulk for disposal (*See Attachment B*). All ASTs are now empty.
- Sixty-five (65) poly 55-gallon drums, six (6) 275-gallon totes previously emptied of their hazardous substances were decontaminated to "RCRA empty" condition and resized into smaller pieces. Total decontaminated and resized containers to date: (1,381) poly and (405) steel 55-gallon drums, and (18) 275-gallon totes.

General maintenance and clean up were conducted throughout the Site.

2. Problems Encountered: None at this time.

3. Anticipated Problems/Recommended Solutions: None at this time.

4. Health and Safety Problems/Recommended Solutions: None at this time

5. Planning

A. START-3: Site documentation and monitoring of the removal action will continue. Site documentation includes maintaining the Site logbook, photo and video documentation, and updating the EPA website as progress is made and new

information is obtained, www.epaosc.org/DiazRemoval. Removal Actions will conclude and subsequent demobilization from the Site.

- B. ERRS: The final operational period will consist of loading sludges for transport and disposal, pickup of roll-off containers of "RCRA empty" drums and tote pieces, demobilization of equipment (i.e. forklifts, backhoe, port-o-johns, etc.). A final Site walk will be conducted by the EPA OSC and ADEQ. The mayor and fire chief will be notified of project completion. The Site will be secured and prepared for transfer back to ADEQ.
