Subject: **Final Sampling Event Letter Report**
Seven Out
Waycross, Ware County, Georgia
EPA Contract No. EP-W-05-054
TDD No. TTEMI-05-001-0076

Dear Mr. Huyser:

The Tetra Tech EM Inc. (Tetra Tech) Superfund Technical Assessment and Response Team (START) is submitting this final letter report for the sampling event at the Seven Out site in Waycross, Ware County, Georgia. The U.S. Environmental Protection Agency (EPA) requested that Tetra Tech START collect split samples with the potentially responsible parties' (PRP) contractor. Specifically, Tetra Tech was tasked to prepare a work plan, a site-specific sampling plan (SSSP), a quality assurance project plan (QAPP), and a site-specific health and safety plan (HASP); collect up to 15 split samples with the PRP contractor; and provide oversight of the PRP contractor sampling activities.

This letter report summarizes field activities conducted during the sampling event and includes six appendices. Appendix A includes site figures, Appendix B provides data tables, and Appendix C contains the photographic log. Appendix D is a copy of the Tetra Tech START logbook notes. Appendix E contains the Tetra Tech data validation report, Appendix F contains the analytical data received from Winter Environmental Services (Winter), and Appendix G is a table of witnesses.

Background

The Seven Out site is located at 901 Francis Street in Waycross, Ware County, Georgia, in a mixed-land-use area. The site is bounded by Francis Street to the north, Folks Street to the east, and property owned by CSX Railroad to the south and west (see Figure 1 in Appendix A). The property has been owned by Seven Out, LLC, since 2002, but was used primarily by BCX, Inc., from January 2003 until sometime in 2004.

BCX treated industrial wastewater at the site and released the treated water to the City of Waycross publicly owned treatment works (POTW). The site is characterized by dozens of tanks, both horizontal and vertical, with associated piping and valve works (see Figure 2 in Appendix A). Because BCX failed to meet the discharge permit requirements, the city terminated BCX's permit on March 1, 2004 and disconnected the effluent connection. BCX, however, continued to accept wastewater for treatment, eventually filling all 37 permanent on-site tanks. Four temporary storage tanks were brought on site to store additional water. At some point in 2004, BCX abandoned the site, leaving approximately 350,000 gallons of liquid waste and an estimated 150,000 gallons of sludge or solids at the site.

In August 2004, Tetra Tech performed a removal assessment at the site. Thirty-three waste and four soil samples were collected. Detectable concentrations of organic and inorganic constituents were found in the tank samples, although not at levels that would qualify any of the materials as hazardous waste. On January 27, 2005, EPA again visited the site in response to a request from the Georgia Department of Natural Resources Environmental Protection Division. Water was observed overtopping the secondary containment wall and flowing into a nearby drainage ditch at the facility. EPA therefore initiated an emergency removal action to stabilize the facility and remove the wastewater. EPA removed almost 350,000 gallons of wastewater and other liquid waste. The sludges were not addressed during this removal action.

An EPA cost-recovery investigation identified several entities as PRPs for the site. On July 30, 2008, EPA and the PRPs entered into an Administrative Settlement Agreement and Order on Consent (AOC) to conduct removal activities at the Seven Out site in accordance with the National Oil and Hazardous Substances Pollution Contingency Plan. In response, the PRP group hired Winter Environmental as the prime remediation contractor. Winter submitted a work plan, subsequently approved by EPA, that called for an initial round of sampling to delineate the nature and volume of the remaining wastes at the site. EPA tasked Tetra Tech to provide oversight of Winter's sampling activities to ensure the work plan was being followed. Additionally, Tetra Tech was asked to collect split samples of selected waste to evaluate whether Winter's contracted laboratory was analyzing the waste properly and to ensure that Winter was reporting the results accurately to EPA.

Sampling Activities

On November 10, 2008, Tetra Tech personnel Charles Berry and Kyle Russell arrived on site and met with the Winter crew, led by Project Manager Brent Sasser. On-scene coordinator (OSC) Matthew Huyser arrived shortly after, and a brief kickoff and safety meeting was held. Winter explained the sampling process outlined in the work plan in greater detail, and all personnel discussed the required safety precautions and procedures outlined in both Winter's and Tetra Tech's health and safety plans and how they affected the various organizations represented on site.

Winter's work plan called for accessing each tank through the top-mounted manhole and performing air monitoring within each tank using a standard 4-gas meter for monitoring percent oxygen, percent of lower explosive limit, carbon monoxide, and hydrogen sulfide; and a photoionization detector (PID) for monitoring volatile organic compounds (VOCs). Two Winter personnel operating from an articulating manlift were lifted to the top of each vertical tank. Where possible, the top-mounted manhole of the tank was removed and air monitoring of the interior of the tank was performed. Some tanks were bolted too tightly to access, and other tanks were without top-mounted manholes. In response, Winter brought in a pneumatic bolt de-header to remove the tight bolts and access the top-mounted manholes. Air monitoring was performed from the vent stack on the top of each tank for the tanks without top-mounted manholes. Once a non-explosive atmosphere was confirmed, a circular metal saw was used to cut open an access point on the top of the tank. Samples were collected using a bailer for liquid media and a Ponar dredge for sludges. Winter found that nearly every tank contained an appreciable amount of product, mostly a thick sludge of used petroleum.

Also sampled were approximately one dozen containers of various materials stored in an adjacent open shed. The containers were a mix of 55-gallon drums and 275-gallon totes. Tetra Tech assisted Winter by donning Level B personal protective equipment (PPE) to open the containers of unknown contents and collect samples of the containers that could be safely opened. Tetra Tech collected one sample from these containers. Sample TO-01 was collected from a tote and split with Winter.

On November 14, 2008, Winter, Tetra Tech, and EPA demobilized from the site. Tetra Tech had collected 10 split waste samples with Winter, or 12-percent of the total samples collected by the PRP contractor. OSC Huyser said that he felt this number constituted an adequate quality control check on the PRP contractor and instructed Tetra Tech not to return the next week, when activities were scheduled to resume.

Work Plan Compliance and Issues

Tetra Tech was tasked with observing Winter throughout the sampling event to monitor Winter's adherence to the approved work plan and compliance with all applicable health and safety regulations. In Tetra Tech's opinion, Winter's sampling protocol was generally conducted in compliance with the work plan dated October 9, 2008, and approved by EPA. Winter's sampling approach was also in general compliance with EPA Field Branches Quality System and Technical Procedures. Proper cross-contamination precautions were taken and sampling equipment was decontaminated between each sample. Winter applied proper safety precautions with respect to fall protection and monitoring potentially hazardous atmospheres before any metal was cut or sawed. Additionally, Winter used Level C PPE several times to mitigate noxious odors emanating from the tanks.

Winter's work plan indicated the drums and totes would be addressed during the removal action portion of site activities. Winter's project manager, Mr. Sasser, agreed to collect waste samples during the sampling phase, but air monitoring of one open drum indicated an increase to Level B PPE was warranted. However, Winter's personnel on site were not qualified to conduct Level B field activities. Although Tetra Tech's original work plan indicated Tetra Tech would not physically collect any samples, OSC Huyser agreed to allow Tetra Tech, whose personnel were trained for Level B operations, to collect the samples from the drums and totes in the hope that the PRP would be able to remove the drums and totes from the site more quickly than if the sampling were delayed.

Winter inadvertently caused several of the tall vertical tanks to begin leaking. Notably, tanks SH-1, SH-2, SH-3, SH-4, and OP-1 were all seen to be leaking small amounts of fluid from the bases. The vibration introduced by the de-header used on the hatch bolts of these tanks possibly caused liquid to weep from locations where historical leaks had occurred. Most of the tanks in the facility show signs of pin-hole leaks. Also, much of the concrete in the secondary containment area is stained from prior leaks in the same pattern as the current leaks. It is likely that many of the tanks have experienced historical leaks at some point in the past. Winter initially used a polypropylene boom to absorb any leaks from the tanks.

Waste Characterization

Tetra Tech analyzed 10 waste samples as splits, nine from the tanks (including one duplicate) and one from a tote. According to the sample data, none of the samples was characteristically ignitable in accordance with the Resource Conservation and Recovery Act (RCRA). Furthermore, none of the samples exhibited the RCRA characteristic of corrosivity.

All samples indicated some metals contamination. A review for volatile organic compounds (VOC) and semivolatile organic compounds (SVOC) revealed similar results. Characteristic waste codes, if applicable, can be assigned once toxicity characteristic leaching procedure (TCLP) results have been received for these data. As of this report, the results of TCLP analyses for VOCs and SVOCs were pending.

Comparison of results obtained from Winter's procured laboratory with Tetra Tech's results for the same samples revealed several discrepancies. Tetra Tech's results exceeded Winter's by an order of magnitude

Mr. M. Huyser
November 30, 2009
Page 4

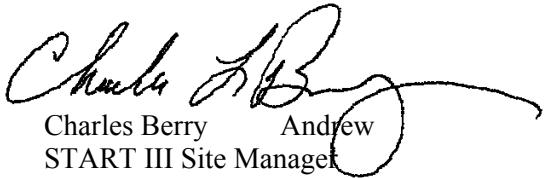

for some of the analytes. Possible explanations for the differences in Winter's and Tetra Tech's data may include: (1) liquid samples may have stratified slightly before the samples were split or prior to analysis by the laboratories, thus affecting the homogeneity; and, (2) solids may not have been completely homogenized before the sample was split.

Analytical data for the aqueous samples revealed diesel range organics, a few VOCs, and some SVOCs and metals reported significantly different results (see the tables in Appendix B). The VOC methyl tert-butyl ether, for example, was detected in Tetra Tech's SH-4 sample at 230 micrograms per liter ($\mu\text{g}/\text{L}$), while none was reported in Winter's. Conversely, methylene chloride was detected Winter's CT-5 sample at 230 $\mu\text{g}/\text{L}$; while none was reported in Tetra Tech's. Other VOCs with discrepancies included toluene and total xylenes. Split sample results for SVOCs that were found to be significantly different include benzo(k)flouranthene, chrysene, fluoranthene, phenanthrene, and pyrene. Metals that were found to be an order of magnitude different include arsenic, barium, chromium, and lead. Corrosivity measurements were found to be more than 10 percent different in only one aqueous sample, SH-4.

Analytical results for solid samples revealed even more significant differences. For example, an order of magnitude greater in gasoline range organics, diesel range organics, a few metals, as well as some VOCs and SVOCs (see the tables in Appendix B). VOCs where discrepancies were found include 2-butanone, 4-methyl-2-pentanone, acetone, benzene, chlorobenzene, ethylbenzene, isopropylbenzene, methylcyclohexane, tetrachloroethene, toluene, and total xylenes. SVOC analyses with significant differences include 2-methylnaphthalene, 4-methylphenol, anthracene, benz(a)anthracene, benzo(b)fluoranthene, benzo(k)fluoranthene, bis(2-ethylhexyl)phthalate, chrysene, di-n-butyl phthalate, fluoranthene, naphthalene, phenanthrene, phenol, and pyrene. Metals with discrepancies include barium, cadmium, and silver. Corrosivity measurements were found to be more than 10 percent different in only one solid sample, CT-5.

If you have any questions or need additional copies of this report, please call me at (678) 775-3098 or Brian Croft at (678) 775-3113.

Sincerely,

Charles Berry Andrew

Notes:

HIGHLIGHTED results indicate a difference in Winter Environmental (Winter) and Tetra Tech data of greater than 10 percent for corrosivity or an order of magnitude for other analyses.

The Winter Environmental data are assumed to have been generated prior to data validation.

BOLD text indicates positive results

RED text indicates that Winter's data was higher than Tetra Tech's

Regulatory Level = the maximum allowable concentration of the contaminant before receiving the toxicity characteristic

* = For water samples, total xylenes were reported as the m,p- and o- isomers.

Env. = Environmental

MEK = methyl ethyl ketone

mg/L = Milligrams per liter

MI BK = methyl isobutyl ketone

µg/L = Micrograms per liter

J = The analyte was positively identified; the associated value is the approximate concentration of the analyte in the sample.

J = The analyte was positively identified; the associated value is the approximate concentration of the analyte in the sample and may be biased low.

ND = Not detected

NL = Not Listed

| Corrosivity (pH units) | NL | NL | 8.9 | 9.5 | 8.7 | 9.0 | 8.2 | 8.6 | 3.3 | 6.5 |

Notes:

HIGHLIGHTED results indicate a difference in Winter Environmental (Winter) and Tetra Tech's data of greater than 10 percent for corrosivity or an order of magnitude for other analyses.

The Winter Environmental data are assumed to have been generated prior to data validation.

BOLD text indicates positive results

RED text indicates that Winter's data was higher than Tetra Tech's

Regulatory Level = the maximum allowable concentration of the contaminant before receiving the toxicity characteristic

* = The sample from tank TO-01 was an oily sample that was analyzed as a solid sample by Tetra Tech, but as an aqueous sample from Winter Environmental

Env. = Environmental

MEK = methyl ethyl ketone

mg/kg = Milligrams per kilogram

MIKB = methyl isobutyl ketone

PCE = perchloroethene or tetrachloroethene

TCE = trichloroethene

µg/kg = Micrograms per kilogram

J = The analyte was positively identified; the associated value is the approximate concentration of the analyte in the sample

J- = The analyte was positively identified; the associated value is the approximate concentration of the analyte in the sample and may be biased low

ND = Not detected

NL = Not Listed

"Rite in the Rain"
ALL-WEATHER
JOURNAL
No. 391

RECYCLABLE

"Rite in the Rain" - A unique All-Weather Writing paper created to shed water and enhance the written image. It is widely used throughout the world for recording critical field data in all kinds of weather.

Available in a variety of standard and custom printed case-bound field books, loose leaf, spiral and stapled notebooks, multi-copy sets and copier paper.

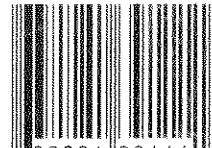

For best results, use a pencil or an all-weather pen.

11/10/08

0745 START ON SITE. Winters on site
0745 Review & sign HASP.

0750 Winters begins site prep. Waiting
on lift to arrive.

0800 Winter Personnel Project Manager
is Brent Sasser. 678 3627619 cell
Joseph King 404 925 8818 cell

0840 Winter has set up a decent eye
wash system outside the secondary
containment on west side.

0950 Winter is set up inside secondary containment
and will go up on lift to open top.
will open 5 at a time, air monitor, then let
vent. Then will go back up and sample.
Safety uses will include harness & 3 point
connection at all times in lift. Will use
4-gas & PID to air monitor.

0950 Winter personnel is attached to lift
and goes up in lift to check tank
tops.

Earlier START Berry & Russell with OSC
Huyser and winter did site walk
through. Went through buildings on
SW side of site. Various drums & 5-gal
buckets were observed in buildings

3

11/10/08

12-14⁰²
empty ~~JKR~~ jars & full bags of goat
pepsi, and calcium chloride (Dow)
Buckets observed. Photos document this.

1000 SH1 Tank does not have a ~~JKR~~
main hole on top. Going to open any way

10¹⁵⁰² SH1 tank read on PID - ~~JKR~~ 3.7 ppm

H₂S - 3.0 LEL-5% CO-2.0 O₂ 20.9

10⁴⁰ SH-2 tank PID-224 CO-6

11/10/08

1530 START, Winter, and OSC Finish
 for the day. Winter was able to air
 monitor 17 tanks. Waiting for equipment
 to cut open access ports. START
 WFT site

W/11/03

0700 START Berry and Russell
Arrive on-site. Winter EW. is already
here setting up decon pad and getting
ready for today.

0710 OSC arrives onsite. Winter goes
over safety meeting on decon activities
opening tanks & drum sampling.
START will collect two 2-oz & three 4-oz
sample jars per sample collected by Winter
0740 START & winter begin sampling Drums
& containers in storage area

1330 Winter will resample CT-S for a greater volume.

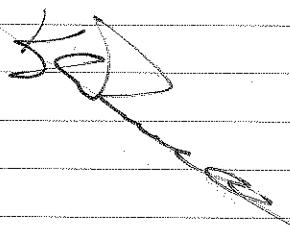

1345 Sample collected at CT-1

1430 Sample collected at CT-15

1510 Sample collected at CT-5S

1520 Sample collected at CT-5SD

1700 START off-site

9

11/12/08

0700 START on-site, winter setting up for the day.

Weather: Partly Cloudy, mid 70°, wind E S-10, 10% chance of rain

START will move out in level B today to sample drums in garage storage area. Winter will continue to sample tanks in containment area.

0725 Safety meeting, calibrate PID, and 4-Gas

0800 Winter begins deheading manhole access bolts @ SH-2.

0823 SH-2 is completely full,

Manhole is opened. Process

takes about 20-30 minutes to dehead bolts & break cover face.

0830 Removing heads on SH-3.

0840 SH-3 removed. Process much faster. Tank is 75% full

0900 SH tanks are circumference of 33.25 ft. $D = 10.6 \text{ ft}$ $H = 29.5 \text{ ft}$

SH-1 is two ft higher than others

$\pm 19,150 \text{ gallons in SH tanks}$

SH 2 & 4 are 100% full; SH 3 75% full

over

11/12/08

0930 new numbers for tank volumes

SH-1 10,000 gallon SH-2-SH-4 19,500 gallon

SS-1, SS-2 are 33.25 ft cir.

RW1, RW2 are 15.10 ft cir.

CD-1 - CD-4 Cir = 33.50 ft

OP-1 - OP4 Cir. = 33.25 ft | DTW

APPENDIX E

TETRA TECH DATA VALIDATION REPORT **(112 Pages)**

February 6, 2009

Mr. Matthew Huyser
On-Scene Coordinator
U.S. Environmental Protection Agency, Region 4
61 Forsyth Street SW, 11th Floor
Atlanta, Georgia 30303

Subject: **Seven Out**
Technical Direction Document Number TTEMI-05-001-0076
Contract No. EP-W-05-054 (START III Region 4)
Cursory Data Validation Report
Columbia Analytical Services, Inc., Reports Nos. J0805565 and J0805578
Analytical Parameters: Volatile organic compounds (VOC), semivolatile organic compounds (SVOC), polychlorinated biphenyls (PCB), gasoline range organics (GRO), extractable petroleum hydrocarbons (EPH), metals, ignitability, and pH

| Laboratory Report No. | Samples | Field Duplicate Pairs | Field Blanks |
|-----------------------|--|-----------------------|--------------|
| J0805565 | CT-1, CT-1S, CT-5, CT-5S, CT-5SD, and TO-1 | CT-5S and CT-5SD | None |
| J0805578 | DP-2S, OP-4S, SH-1S, and SH-4 | None | Trip Blank |

Dear Mr. Huyser:

The Tetra Tech Superfund Technical Assessment and Response Team (START) conducted data validation on the analytical results for three waste water samples, one waste oil sample, five waste sludge samples, and two quality control (QC) samples (one field duplicate waste sludge sample and one trip blank) that were collected at the Seven Out site in Waycross, Ware County, Georgia, from November 10 through 14, 2008. The samples were analyzed under laboratory reports numbers J0805565 and J0805578 by Columbia Analytical Services, Inc. (Columbia), of Jacksonville, Florida. The samples were analyzed for volatile organic compounds (VOC) by SW-846 Method 8260B, semivolatile organic compounds (SVOC) by SW-846 Method 8270C, polychlorinated biphenyls (PCB) by SW-846 Method 8082, gasoline range organics (GRO) and extractable petroleum hydrocarbons (EPH, called "Diesel Range Organics" in the laboratory reports) by SW-846 Method 8015B, metals by SW-846 Methods 6020, 7470A, and 7471A, ignitability by SW-846 Methods 1020A and 1030, and pH by SW-846 Method 9045D. Columbia subcontracted the GRO analyses to the ENCO Laboratories, Inc. (Inc.) facility in Cary, North Carolina and included these results in the associated Columbia laboratory reports.

Analytical data were evaluated in general accordance with applicable data validation guidance documents, including the following: the U.S. Environmental Protection Agency (EPA) Contract Laboratory Program (CLP) National Functional Guidelines (NFG) for Superfund Organic Methods Data Review (June 2008) and the EPA CLP NFG for Inorganic Data Review (October 2004). The analytical methods used by Columbia during this project provide guidance on procedures and method acceptance criteria that, in some areas, differ from the NFGs. Where the methods and the NFGs differ, the data validators followed the acceptance criteria in the methods. In addition, if laboratory-derived acceptance criteria were presented in the Columbia data package, then these criteria were used to evaluate the data, unless the criteria were considered inadequate.

Data were evaluated based on the following criteria:

- Data Completeness *
- Sample Preservation, Sample Receipt, and Holding Times
- Laboratory Blanks
- Laboratory Control Samples (LCS) and Laboratory Control Sample Duplicates (LCSD)
- Matrix Spike/Matrix Spike Duplicates (MS/MSD)
- Surrogate Recoveries
- Field Duplicates
- Dilution and Reported Detection Limits
- Analyte Quantitation

* All QC criteria were met for this evaluated parameter. Those criteria without an asterisk (*) displayed deficiencies that are described later in this report.

The following efficient and effective data validation approach was used for providing an abbreviated assessment of the quality of the set of data. Data evaluation consisted of a review of the data with a focus on the available review parameters present in the summary data package (which typically does not include the raw data). This review was not a complete assessment of all possible quality control parameters or even of each quality control parameter that was reviewed. The review, rather, was intended to efficiently identify and focus on those problems and quality control deficiencies that could be readily identified from the summary data package. Because of the nature of this approach, some problems and deficiencies may not have been identified; as such, this approach may not support some critical uses and required limits on decision-making uncertainty for the data.

Enclosure 1 presents copies of the sample results sheets from the laboratory data packages, with hand-entered qualifications from the data validation effort. Enclosure 2 presents the same data validation-qualified analytical results in table format.

DATA REVIEW RESULTS

The following sections discuss the data package and provide an overall assessment of the data. This discussion concentrates on the irregularities associated with the various parameters as indicated above. The laboratory misidentified sample CT-5SD as CT-55D. The corrections will be made manually in Enclosures 1 and 2.

SAMPLE PRESERVATION, SAMPLE RECEIPT, AND HOLDING TIMES

The standard holding times were met for all sample analyses. However, the bottles of sample CT-1 that were intended for use in the organic analyses were received at the laboratory with pH ranging from 6 to 9 standard pH units, well above the preservation requirement of <2. The laboratory immediately acidified the bottles. The VOC analysis was performed 8 days after sample collection, just beyond the 7-day holding time for unacidified samples. Because the samples were kept refrigerated and the laboratory promptly acidified them, no qualifications were made for this minor deviation. However, the GRO preparation was performed on the 13th day after sample collection. Because the components of this method are volatile, the GRO result for sample CT-1 was flagged "J-" to indicate that it is considered estimated and may be biased low.

LABORATORY BLANKS

Some of the metals preparation blanks contained various metals at concentrations less than their associated reporting limits. All positive results for mercury, except for sample SH-4, had concentrations similar to their associated blanks. Therefore, they were considered to be laboratory contamination and flagged "U". The other metals in all samples were either not detected or had much higher concentrations than their associated blanks. Therefore, no further qualifications are warranted.

Most organic preparation blanks contained no detectable analytes. One exception was the VOC blank associated with the analysis of the sludge samples in both laboratory reports, which had low concentrations of common laboratory contaminants acetone and methylene chloride. The samples contained much higher concentrations of the analytes, so no qualifications are warranted. Also, the trip blank had a low concentration of acetone, which was much lower than the concentrations in the samples. No qualifications were made for this exceedance, which may represent cross-contamination from one or more of the field samples. In addition, preparation blank JWG0804515-3 for the EPH analysis had a concentration below the reporting limit. All associated samples had concentrations above the reporting limit; therefore, no qualifications were applied.

LABORATORY CONTROL SAMPLES AND LABORATORY CONTROL SAMPLE DUPLICATES

All LCS and LCSD results were within the QC limits with the following exceptions for the SVOC analyses. The LCS accompanying the analysis of the aqueous samples (CT-1, CT-5, and SH-4) had a recovery above the QC limit for 4-nitroaniline and a recovery below the QC limit for 1,2,4-trichlorobenzene. The LCS and LCSD accompanying the analysis of the sludge samples (CT-1S, CT-5S, CT-5SD, DP-2S, OP-4S, and SH-1S) had recoveries above the QC limits for 2-chlorophenol, 4-nitroaniline, and hexachlorobutadiene. In addition, the LCSD recovery was above the QC limit for bis(2-chloroisopropyl)ether. The LCS accompanying the analysis of the oil sample (TO-01) had recoveries above the QC limits for 4-chloro-3-methylphenol and N-nitrosodi-n-propylamine. The non-detect 1,2,4-trichlorobenzene results for samples CT-1, CT-5, and SH-4 were considered to be estimated and flagged "UJ". No qualifications were required for the remaining exceedances because the associated results were non-detect and the exceedances were above the QC limits.

MATRIX SPIKE/MATRIX SPIKE DUPLICATES

Most of the MS/MSD results were within QC limits. In the VOC MS/MSD analyses performed on sample CT-1, recoveries of bromomethane were below the specified QC limits, while those for cyclohexane and methylcyclohexane were above QC limits. None of these compounds were detected in the unspiked sample; therefore, the bromomethane results were considered estimated and flagged "UJ" in sample CT-1.

In the SVOC MS/MSD analyses performed on sample CT-1, N-nitrosodiphenylamine, hexachlorocyclopentadiene, 2-chloronaphthalene, acenaphthene, fluorene, diethyl phthalate, phenanthrene, anthracene, fluoranthene, pyrene, butyl benzyl phthalate, 3,3'-dichlorobenzidine, benz(a)anthracene, chrysene, bis(2-ethylhexyl)phthalate, di-n-octyl phthalate, benzo(b)fluoranthene, benzo(k)fluoranthene, benzo(a)pyrene, indeno(1,2,3-cd)pyrene, dibenz(a,h)anthracene, and benzo(g,h,i)perylene had recoveries below their respective QC limits. These irregularities appear to be due to interference from nontarget analytes in that sample; therefore, positive (flagged "J-") and non-detect (flagged "UJ") results for those analytes in sample CT-1 were qualified as estimated and may be biased low. Similar irregularities may occur with these or other analytes in other samples. In addition, the MSD recovery for 4-bromophenyl phenyl ether was above the QC limit and the MS recovery for

carbazole was below the QC limit. No qualifications were warranted because the remaining recovery was within the QC limits in each case.

In the SVOC MS/MSD analyses performed on sample TO-01, phenol, N-nitrosodi-n-propylamine, 4-chloro-3-methylphenol, and acenaphthene had recoveries above their respective QC limits. In addition, the MSD recoveries were above their respective QC limits for 4-nitrophenol, pentachlorophenol, and pyrene. Again, these irregularities appear to be due to interference from nontarget analytes in that sample. The associated results were non-detect; therefore, no qualification were required.

In the EPH MS/MSD analyses performed on sample CT-1, the recovery of the analyte was within QC limits for the MS sample but negative for the MSD sample (that is, the spiked sample result was less than the unspiked sample result). In addition, the relative percent difference (RPD) between the MS and MSD samples was more than twice the QC limit. The spike was approximately half of the concentration of the unspiked sample. The irregularities could be the result of either matrix interference or an uneven distribution of the analyte within the sample. The EPH result for sample CT-1 was qualified as estimated (flagged "J"). Similar irregularities may occur in other samples.

SURROGATE RECOVERIES

Many of these samples had problems with surrogate recoveries in one or more organic analyses. These types of problems indicate matrix interference. In several cases, samples or sample extracts were diluted (as discussed in the next section) in an attempt to minimize the matrix effects, which resulted in several of the surrogate recovery problems listed.

In the VOC analyses, sample CT-5S had one of four surrogate recoveries above QC limits, samples CT-1S, CT-5SD, DP-2S, and SH-1S had two surrogate recoveries above QC limits, and sample OP-4S had all four surrogate recoveries above of QC limits. All positive VOC results for these samples are qualified as estimated with a high bias (flagged "J+").

In the SVOC analyses, samples CT-1S, CT-5SD, and OP-4S had one surrogate recovery outside of QC limits; and samples CT-1, CT-5, DP-2S, and SH-4, had all six surrogate recoveries outside of QC limits. No qualifications were necessary because the associated results required five- to fifty-fold dilutions.

In the PCB analyses, samples CT-1S, CT-5SD, CT-5S, DP-2S, OP-4S, and SH-1S had recoveries of less than 10 percent for the one surrogate. Therefore, the non-detect PCB results for all of those samples were rejected as unusable and flagged "R". Sample TO-01 displayed a PCB surrogate recovery above the QC limits; however, no qualifications were required because the associated results were non-detect.

In the EPH analyses, samples CT-1S, CT-5S, CT-5SD, DP-2S, OP-4S, and SH-1S had surrogate recoveries either zero percent or extremely high, or could not be determined due to their high dilutions; no qualifications were made for these data gaps, since all the samples affected required dilutions.

FIELD DUPLICATES

The following results displayed poor precision (RPD greater than 50 percent) between field sample CT-5S and field duplicate CT-5SD. The associated results were previously qualified as estimated and flagged "J-" due to surrogate failures; therefore, no further qualifications were warranted.

| Analysis | Compound | RPD |
|----------|--------------------|--------------|
| VOC | Methylene chloride | 51.3 percent |
| VOC | 2-Butanone (MEK) | 53.3 percent |

| Analysis | Compound | RPD |
|----------|-----------------------------|--------------|
| VOC | Benzene | 78.6 percent |
| VOC | Methylcyclohexane | 115 percent |
| VOC | 4-Methyl-2-pentanone (MIBK) | 76.9 percent |
| VOC | Toluene | 140 percent |
| VOC | Chlorobenzene | 129 percent |
| VOC | Ethylbenzene | 136 percent |
| VOC | Total Xylenes | 132 percent |
| VOC | Isopropylbenzene | 151 percent |
| SVOC | Pyrene | 52.6 percent |
| SVOC | Benz(a)anthracene | 51.9 percent |
| SVOC | Chrysene | 52.9 percent |
| GRO | GRO | 61.2 percent |

DILUTION AND REPORTED DETECTION LIMITS

The VOC fractions for samples CT-1, CT-5, and SH-4 were analyzed at a 5-fold dilution due to the high concentration of target and nontarget compounds. In addition, sample SH-4 was also analyzed at a 500-fold dilution for acetone to bring the concentration within calibration range. The SVOC extracts for samples CT-1, CT-5, DP-2S, OP-4S, and SH-1S were analyzed at a 5-fold dilution; while those for samples CT-1S, CT-5S, and CT-5SD were analyzed at a 10-fold dilution; and that for sample SH-4 at a 50-fold dilution. The EPH extracts for samples DP-2S and SH-1S were analyzed at a 5-fold dilution; those for samples CT-1S, CT-5, OP-4S, and SH-4 at a 10-fold dilution; and those for samples CT-5S and CT-5SD at a 20-fold dilution. Again, these dilutions were required because of the high concentrations of extractable organics in these compounds. These dilutions resulted in elevated reporting limits for all non-detected results.

ANALYTE QUANTITATION

Some of the positive results in various samples and analyses were above the sample detection limits but below the sample reporting limits, which correspond to the lowest calibration standards. These extrapolations are considered to be estimated and were flagged "J" by the laboratory, except the metals results, which were flagged "B". The latter results were changed to "J" during data validation.

OVERALL ASSESSMENT OF DATA

The overall quality of this data package was acceptable. PCB results for samples CT-1S, CT-5SD, CT-5S, DP-2S, OP-4S, and SH-1S were rejected due to surrogate failures. Some results for VOC, SVOC, and EPH were qualified as estimated for MS/MSD irregularities. Most of those irregularities were probably a consequence of the highly contaminated nature of the samples, which required dilutions of many samples. Similar problems may exist in other samples. A few 1,2,4-trichlorobenzene results were also qualified for LCS recovery irregularities. Some VOC results were qualified as estimated because matrix interference caused surrogate recoveries to be outside their QC limits. One result for GRO was qualified due to inadequate preservation and holding time. Almost all results for mercury were qualified as non-detect due to preparation blank contamination. The results may be used as qualified with the data use limitations discussed earlier in this report.

Mr. M. Huyser

Notes:

Positive results are listed in **BOLD**.

* = For water samples, total xylenes were reported as the m,p- and o- isomers.

** = Flashpoint was reported in degrees Fahrenheit. Ignitability was reported in millimeters per second.

mg/kg = Milligrams per kilogram

mg/L = Milligrams per liter

µg/kg = Micrograms per kilogram

µg/L = Micrograms per liter

J = The analyte was positively identified; the associated value is the approximate concentration of the analyte in the sample.

J+ = The analyte was positively identified; the associated value is the approximate concentration of the analyte in the sample and may be biased high.

J- = The analyte was positively identified; the associated value is the approximate concentration of the analyte in the sample and may be biased low.

U = The analyte was analyzed for, but was not detected at or above the associated value.

UJ = The analyte was analyzed for, but was not detected at or above the associated value, which is considered approximate due to deficiencies in one or more quality control criteria.

R = The sample result is rejected as unusable due to serious deficiencies in one or more quality control criteria. The analyte may or may not be present in the sample.

NA = The sample was not analyzed for this analyte.

ND = Not detected

Notes:

Positive results are listed in **BOLD**.

* = For water samples, total xylenes were reported as the m,p- and o- isomers.

** = Flashpoint was reported in degrees Fahrenheit. Ignitability was reported in millimeters per second.

mg/kg = Milligrams per kilogram

mg/L = Milligrams per liter

µg/kg = Micrograms per kilogram

µg/L = Micrograms per liter

J = The analyte was positively identified; the associated value is the approximate concentration of the analyte in the sample.

J- = The analyte was positively identified; the associated value is the approximate concentration of the analyte in the sample and may be biased low.

U = The analyte was analyzed for, but was not detected at or above the associated value.

UJ = The analyte was analyzed for, but was not detected at or above the associated value, which is considered approximate due to deficiencies in one or more quality control criteria.

R = The sample result is rejected as unusable due to serious deficiencies in one or more quality control criteria. The analyte may or may not be present in the sample.

NA = The sample was not analyzed for this analyte.

ND = Not detected

Project Address: Waycross, GA

Brent Sasser:

We are reporting to you the results of the analyses performed on the samples received under the project name referenced above and identified with the XENCO Report Number 317459. All results being reported under this Report Number apply to the samples analyzed and properly identified with a Laboratory ID number. Subcontracted analyses are identified in this report with either the NELAC certification number of the subcontract lab in the analyst ID field, or the complete subcontracted report attached to this report.

Unless otherwise noted in a Case Narrative, all data reported in this Analytical Report are in compliance with NELAC standards. Estimation of data uncertainty for this report is found in the quality control section of this report unless otherwise noted. Should insufficient sample be provided to the laboratory to meet the method and NELAC Matrix Duplicate and Matrix Spike requirements, then the data will be analyzed, evaluated and reported using all other available quality control measures.

The validity and integrity of this report will remain intact as long as it is accompanied by this letter and reproduced in full, unless written approval is granted by XENCO Laboratories. This report will be filed for at least 5 years in our archives after which time it will be destroyed without further notice, unless otherwise arranged with you. The samples received, and described as recorded in Report No. 317459 will be filed for 60 days, and after that time they will be properly disposed without further notice, unless otherwise arranged with you. We reserve the right to return to you any unused samples, extracts or solutions related to them if we consider so necessary (e.g., samples identified as hazardous waste, sample sizes exceeding analytical standard practices, controlled substances under regulated protocols, etc).

We thank you for selecting XENCO Laboratories to serve your analytical needs. If you have any questions concerning this report, please feel free to contact us at any time.

Respectfully,

David C. Fuller

Project Manager

- X** In our quality control review of the data a QC deficiency was observed and flagged as noted. MS/MSD recoveries were found to be outside of the laboratory control limits due to possible matrix /chemical interference, or a concentration of target analyte high enough to effect the recovery of the spike concentration. This condition could also effect the relative percent difference in the MS/MSD.
- B** A target analyte or common laboratory contaminant was identified in the method blank. Its presence indicates possible field or laboratory contamination.
- D** The sample(s) were diluted due to targets detected over the highest point of the calibration curve, or due to matrix interference. Dilution factors are included in the final results. The result is from a diluted sample.
- E** The data exceeds the upper calibration limit; therefore, the concentration is reported as estimated.
- F** RPD exceeded lab control limits.
- J** The target analyte was positively identified below the MQL and above the SQL.
- U** Analyte was not detected.
- L** The LCS data for this analytical batch was reported below the laboratory control limits for this analyte. The department supervisor and QA Director reviewed data. The samples were either reanalyzed or flagged as estimated concentrations.
- H** The LCS data for this analytical batch was reported above the laboratory control limits. Supporting QC Data were reviewed by the Department Supervisor and QA Director. Data were determined to be valid for reporting.
- K** Sample analyzed outside of recommended hold time.

Recipient of the Prestigious Small Business Administration Award of Excellence in 1994.

Certified and approved by numerous States and Agencies.

A Small Business and Minority Status Company that delivers SERVICE and QUALITY

Houston - Dallas - San Antonio - Corpus Christi - Midland/Odessa - Tampa - Miami - Latin America

| SURROGATE RECOVERY STUDY | | | | | |
|--------------------------|---------------------|--------------------|--------------------|-------------------|-------|
| VOCs by SW-846 8260B | Amount Found [A] | True Amount [B] | Recovery %R [D] | Control Limits %R | Flags |
| 1,2-Dichloroethane-D4 | 55 | 50 | 110 | 53-135 | |
| 4-Bromofluorobenzene | 45 | 50 | 90 | 53-175 | |
| Toluene-D8 | 49 | 50 | 98 | 56-126 | |

** Surrogates outside limits; data and surrogates confirmed by reanalysis

*** Poor recoveries due to dilution

Surrogate Recovery [D] = 100 * A / B

All results are based on MDL and validated for QC purposes.

Project Address: Waycross, GA

Len Diprima:

We are reporting to you the results of the analyses performed on the samples received under the project name referenced above and identified with the XENCO Report Number 317746. All results being reported under this Report Number apply to the samples analyzed and properly identified with a Laboratory ID number. Subcontracted analyses are identified in this report with either the NELAC certification number of the subcontract lab in the analyst ID field, or the complete subcontracted report attached to this report.

Unless otherwise noted in a Case Narrative, all data reported in this Analytical Report are in compliance with NELAC standards. Estimation of data uncertainty for this report is found in the quality control section of this report unless otherwise noted. Should insufficient sample be provided to the laboratory to meet the method and NELAC Matrix Duplicate and Matrix Spike requirements, then the data will be analyzed, evaluated and reported using all other available quality control measures.

The validity and integrity of this report will remain intact as long as it is accompanied by this letter and reproduced in full, unless written approval is granted by XENCO Laboratories. This report will be filed for at least 5 years in our archives after which time it will be destroyed without further notice, unless otherwise arranged with you. The samples received, and described as recorded in Report No. 317746 will be filed for 60 days, and after that time they will be properly disposed without further notice, unless otherwise arranged with you. We reserve the right to return to you any unused samples, extracts or solutions related to them if we consider so necessary (e.g., samples identified as hazardous waste, sample sizes exceeding analytical standard practices, controlled substances under regulated protocols, etc).

We thank you for selecting XENCO Laboratories to serve your analytical needs. If you have any questions concerning this report, please feel free to contact us at any time.

Respectfully,

David C. Fuller

Project Manager

- X** In our quality control review of the data a QC deficiency was observed and flagged as noted. MS/MSD recoveries were found to be outside of the laboratory control limits due to possible matrix /chemical interference, or a concentration of target analyte high enough to effect the recovery of the spike concentration. This condition could also effect the relative percent difference in the MS/MSD.
- B** A target analyte or common laboratory contaminant was identified in the method blank. Its presence indicates possible field or laboratory contamination.
- D** The sample(s) were diluted due to targets detected over the highest point of the calibration curve, or due to matrix interference. Dilution factors are included in the final results. The result is from a diluted sample.
- E** The data exceeds the upper calibration limit; therefore, the concentration is reported as estimated.
- F** RPD exceeded lab control limits.
- J** The target analyte was positively identified below the MQL and above the SQL.
- U** Analyte was not detected.
- L** The LCS data for this analytical batch was reported below the laboratory control limits for this analyte. The department supervisor and QA Director reviewed data. The samples were either reanalyzed or flagged as estimated concentrations.
- H** The LCS data for this analytical batch was reported above the laboratory control limits. Supporting QC Data were reviewed by the Department Supervisor and QA Director. Data were determined to be valid for reporting.
- K** Sample analyzed outside of recommended hold time.

Recipient of the Prestigious Small Business Administration Award of Excellence in 1994.

Certified and approved by numerous States and Agencies.

Reference: XENCO Report No: **317804****Seven Out Superfund Site**

Project Address:

Brent Sasser:

We are reporting to you the results of the analyses performed on the samples received under the project name referenced above and identified with the XENCO Report Number 317804. All results being reported under this Report Number apply to the samples analyzed and properly identified with a Laboratory ID number. Subcontracted analyses are identified in this report with either the NELAC certification number of the subcontract lab in the analyst ID field, or the complete subcontracted report attached to this report.

Unless otherwise noted in a Case Narrative, all data reported in this Analytical Report are in compliance with NELAC standards. Estimation of data uncertainty for this report is found in the quality control section of this report unless otherwise noted. Should insufficient sample be provided to the laboratory to meet the method and NELAC Matrix Duplicate and Matrix Spike requirements, then the data will be analyzed, evaluated and reported using all other available quality control measures.

The validity and integrity of this report will remain intact as long as it is accompanied by this letter and reproduced in full, unless written approval is granted by XENCO Laboratories. This report will be filed for at least 5 years in our archives after which time it will be destroyed without further notice, unless otherwise arranged with you. The samples received, and described as recorded in Report No. 317804 will be filed for 60 days, and after that time they will be properly disposed without further notice, unless otherwise arranged with you. We reserve the right to return to you any unused samples, extracts or solutions related to them if we consider so necessary (e.g., samples identified as hazardous waste, sample sizes exceeding analytical standard practices, controlled substances under regulated protocols, etc).

We thank you for selecting XENCO Laboratories to serve your analytical needs. If you have any questions concerning this report, please feel free to contact us at any time.

Respectfully,

David C. Fuller

Project Manager

- X** In our quality control review of the data a QC deficiency was observed and flagged as noted. MS/MSD recoveries were found to be outside of the laboratory control limits due to possible matrix /chemical interference, or a concentration of target analyte high enough to effect the recovery of the spike concentration. This condition could also effect the relative percent difference in the MS/MSD.
- B** A target analyte or common laboratory contaminant was identified in the method blank. Its presence indicates possible field or laboratory contamination.
- D** The sample(s) were diluted due to targets detected over the highest point of the calibration curve, or due to matrix interference. Dilution factors are included in the final results. The result is from a diluted sample.
- E** The data exceeds the upper calibration limit; therefore, the concentration is reported as estimated.
- F** RPD exceeded lab control limits.
- J** The target analyte was positively identified below the MQL and above the SQL.
- U** Analyte was not detected.
- L** The LCS data for this analytical batch was reported below the laboratory control limits for this analyte. The department supervisor and QA Director reviewed data. The samples were either reanalyzed or flagged as estimated concentrations.
- H** The LCS data for this analytical batch was reported above the laboratory control limits. Supporting QC Data were reviewed by the Department Supervisor and QA Director. Data were determined to be valid for reporting.
- K** Sample analyzed outside of recommended hold time.

Recipient of the Prestigious Small Business Administration Award of Excellence in 1994.

Certified and approved by numerous States and Agencies.

A Small Business and Minority Status Company that delivers SERVICE and QUALITY

Norcross, GA 30092Reference: XENCO Report No: **318116****Seven Out Superfund Site**

Project Address: Waycross, GA

Brent Sasser:

We are reporting to you the results of the analyses performed on the samples received under the project name referenced above and identified with the XENCO Report Number 318116. All results being reported under this Report Number apply to the samples analyzed and properly identified with a Laboratory ID number. Subcontracted analyses are identified in this report with either the NELAC certification number of the subcontract lab in the analyst ID field, or the complete subcontracted report attached to this report.

Unless otherwise noted in a Case Narrative, all data reported in this Analytical Report are in compliance with NELAC standards. Estimation of data uncertainty for this report is found in the quality control section of this report unless otherwise noted. Should insufficient sample be provided to the laboratory to meet the method and NELAC Matrix Duplicate and Matrix Spike requirements, then the data will be analyzed, evaluated and reported using all other available quality control measures.

The validity and integrity of this report will remain intact as long as it is accompanied by this letter and reproduced in full, unless written approval is granted by XENCO Laboratories. This report will be filed for at least 5 years in our archives after which time it will be destroyed without further notice, unless otherwise arranged with you. The samples received, and described as recorded in Report No. 318116 will be filed for 60 days, and after that time they will be properly disposed without further notice, unless otherwise arranged with you. We reserve the right to return to you any unused samples, extracts or solutions related to them if we consider so necessary (e.g., samples identified as hazardous waste, sample sizes exceeding analytical standard practices, controlled substances under regulated protocols, etc).

We thank you for selecting XENCO Laboratories to serve your analytical needs. If you have any questions concerning this report, please feel free to contact us at any time.

Respectfully,

David C. Fuller

Project Manager

- X** In our quality control review of the data a QC deficiency was observed and flagged as noted. MS/MSD recoveries were found to be outside of the laboratory control limits due to possible matrix /chemical interference, or a concentration of target analyte high enough to effect the recovery of the spike concentration. This condition could also effect the relative percent difference in the MS/MSD.
- B** A target analyte or common laboratory contaminant was identified in the method blank. Its presence indicates possible field or laboratory contamination.
- D** The sample(s) were diluted due to targets detected over the highest point of the calibration curve, or due to matrix interference. Dilution factors are included in the final results. The result is from a diluted sample.
- E** The data exceeds the upper calibration limit; therefore, the concentration is reported as estimated.
- F** RPD exceeded lab control limits.
- J** The target analyte was positively identified below the MQL and above the SQL.
- U** Analyte was not detected.
- L** The LCS data for this analytical batch was reported below the laboratory control limits for this analyte. The department supervisor and QA Director reviewed data. The samples were either reanalyzed or flagged as estimated concentrations.
- H** The LCS data for this analytical batch was reported above the laboratory control limits. Supporting QC Data were reviewed by the Department Supervisor and QA Director. Data were determined to be valid for reporting.
- K** Sample analyzed outside of recommended hold time.

Recipient of the Prestigious Small Business Administration Award of Excellence in 1994.

Certified and approved by numerous States and Agencies.

A Small Business and Minority Status Company that delivers SERVICE and QUALITY

Houston - Dallas - San Antonio - Corpus Christi - Midland/Odessa - Tampa - Miami - Latin America

Sample Receipt Checklist

| | | | |
|--|-----|----|----------------|
| #1 Temperature of cooler? | 5°C | | |
| #2 Shipping container in good condition? | YES | No | None |
| #3 Samples received on ice? | YES | No | N/A Blue/Water |
| #4 Custody Seals intact on shipping container/ cooler? | Yes | No | N/A |
| #5 Custody Seals intact on sample bottles/ container? | Yes | No | N/A |
| #6 Chain of Custody present? | YES | No | |
| #7 Sample instructions complete of Chain of Custody? | YES | No | |
| #8 Any missing/extraneous samples? | Yes | NO | |
| #9 Chain of Custody signed when relinquished/ received? | YES | No | |
| #10 Chain of Custody agrees with sample label(s)? | YES | No | |
| #11 Container label(s) legible and intact? | YES | No | |
| #12 Sample matrix/ properties agree with Chain of Custody? | YES | No | |
| #13 Samples in proper container/ bottle? | YES | No | |
| #14 Samples properly preserved? | YES | No | N/A |
| #15 Sample container(s) intact? | YES | NO | |
| #16 Sufficient sample amount for indicated test(s)? | YES | No | |
| #17 All samples received within sufficient hold time? | YES | No | |
| #18 Subcontract of sample(s)? | Yes | NO | |
| #19 VOC samples have zero headspace? | YES | No | N/A |

Nonconformance Documentation

Contact: _____ Contacted by: _____ Date/ Time: _____

Regarding: #15: Sample DAF-2 was received with two broken Hel vials

Corrective Action Taken:

#15 - The last remaining sample is available for testing

Check all that Apply: Client understands and would like to proceed with analysis
 Cooling process had begun shortly after sampling event

Project Address: Waycross, GA

Brent Sasser:

We are reporting to you the results of the analyses performed on the samples received under the project name referenced above and identified with the XENCO Report Number 318164. All results being reported under this Report Number apply to the samples analyzed and properly identified with a Laboratory ID number. Subcontracted analyses are identified in this report with either the NELAC certification number of the subcontract lab in the analyst ID field, or the complete subcontracted report attached to this report.

Unless otherwise noted in a Case Narrative, all data reported in this Analytical Report are in compliance with NELAC standards. Estimation of data uncertainty for this report is found in the quality control section of this report unless otherwise noted. Should insufficient sample be provided to the laboratory to meet the method and NELAC Matrix Duplicate and Matrix Spike requirements, then the data will be analyzed, evaluated and reported using all other available quality control measures.

The validity and integrity of this report will remain intact as long as it is accompanied by this letter and reproduced in full, unless written approval is granted by XENCO Laboratories. This report will be filed for at least 5 years in our archives after which time it will be destroyed without further notice, unless otherwise arranged with you. The samples received, and described as recorded in Report No. 318164 will be filed for 60 days, and after that time they will be properly disposed without further notice, unless otherwise arranged with you. We reserve the right to return to you any unused samples, extracts or solutions related to them if we consider so necessary (e.g., samples identified as hazardous waste, sample sizes exceeding analytical standard practices, controlled substances under regulated protocols, etc).

We thank you for selecting XENCO Laboratories to serve your analytical needs. If you have any questions concerning this report, please feel free to contact us at any time.

Respectfully,

David C. Fuller

Project Manager

- X** In our quality control review of the data a QC deficiency was observed and flagged as noted. MS/MSD recoveries were found to be outside of the laboratory control limits due to possible matrix /chemical interference, or a concentration of target analyte high enough to effect the recovery of the spike concentration. This condition could also effect the relative percent difference in the MS/MSD.
 - B** A target analyte or common laboratory contaminant was identified in the method blank. Its presence indicates possible field or laboratory contamination.
 - D** The sample(s) were diluted due to targets detected over the highest point of the calibration curve, or due to matrix interference. Dilution factors are included in the final results. The result is from a diluted sample.
 - E** The data exceeds the upper calibration limit; therefore, the concentration is reported as estimated.
 - F** RPD exceeded lab control limits.
 - J** The target analyte was positively identified below the MQL and above the SQL.
 - U** Analyte was not detected.
 - L** The LCS data for this analytical batch was reported below the laboratory control limits for this analyte. The department supervisor and QA Director reviewed data. The samples were either reanalyzed or flagged as estimated concentrations.
 - H** The LCS data for this analytical batch was reported above the laboratory control limits. Supporting QC Data were reviewed by the Department Supervisor and QA Director. Data were determined to be valid for reporting.
 - K** Sample analyzed outside of recommended hold time.
 - JN** A combination of the "N" and the "J" qualifier. The analysis indicates that the analyte is "tentatively identified" and the associated numerical value may not be consistent with the amount actually present in the environmental sample.
- * Outside XENCO's scope of NELAC Accreditation.

Recipient of the Prestigious Small Business Administration Award of Excellence in 1994.

Certified and approved by numerous States and Agencies.

A Small Business and Minority Status Company that delivers SERVICE and QUALITY

Prelogin/Nonconformance Report- Sample Log-In

Client: Winter Env.
Date/ Time: 11/19/08 1300
Lab ID #: 318164
Initials: MH

Sample Receipt Checklist

| | | | |
|--|-----|------|------------------|
| #1 Temperature of cooler? | | | 19°C |
| #2 Shipping container in good condition? | YES | No | None |
| #3 Samples received on ice? | YES | No | (N/A) Blue/Water |
| #4 Custody Seals intact on shipping container/ cooler? | Yes | No | (N/A) |
| #5 Custody Seals intact on sample bottles/ container? | Yes | No | (N/A) |
| #6 Chain of Custody present? | YES | No | |
| #7 Sample instructions complete of Chain of Custody? | YES | No | |
| #8 Any missing/extra samples? | Yes | (NO) | |
| #9 Chain of Custody signed when relinquished/ received? | YES | No | |
| #10 Chain of Custody agrees with sample label(s)? | YES | No | |
| #11 Container label(s) legible and intact? | YES | No | |
| #12 Sample matrix/ properties agree with Chain of Custody? | YES | No | |
| #13 Samples in proper container/ bottle? | YES | No | |
| #14 Samples properly preserved? | YES | No | N/A |
| #15 Sample container(s) intact? | YES | No | |
| #16 Sufficient sample amount for indicated test(s)? | YES | No | |
| #17 All samples received within sufficient hold time? | YES | No | |
| #18 Subcontract of sample(s)? | Yes | (NO) | |
| #19 VOC samples have zero headspace? | YES | No | N/A |

Nonconformance Documentation

Contact: _____ Contacted by: _____ Date/ Time: _____

Regarding: _____

Corrective Action Taken:

Check all that Apply: Client understands and would like to proceed with analysis
 Cooling process had begun shortly after sampling event
