

## **APPENDIX A**

### **PHOTOGRAPHIC LOG OF THE TRAINER INDUSTRIES, LLC/ FORMER METRO CONTAINER CORPORATION SITE**

**Former Metro Container Corporation Site, Trainer, Pennsylvania  
Site Characterization Photograph Log – January 1989**

Photo Metro-Trainer.89-01: View to the northwest of the Metro Container Corporation office on January 23, 1989; note the stockpiled drums (far right) north of the office. By January 1989, the USEPA had installed a security fence, constructed the plywood wall to retain sludge runoff on the site, had subcontractors evaluating waste, drum, and tank removal strategies, and were in active negotiation with the five Responsible Parties (RPs).

Photo Metro-Trainer.89-02: View to the northeast of the stockpiled drums located north of Metro Container Corporation office building. The roadway in the foreground, which no longer exists, appears to have been the primary access way for drum deliveries to the site.

**Former Metro Container Corporation Site, Trainer, Pennsylvania  
Site Characterization Photograph Log – January 1989**

Photo Metro-Trainer.89-03: View to the northeast of the Metro Container Corporation locker room and office (far right background), stockpiled drums (far left background), a discarded tank (right foreground), and a portion of the conveyor system (center) that was used to carry the drums into the drum reconditioning building (far right, not pictured).

Photo Metro-Trainer.89-04: View to the north-northeast of hundreds of stockpiled drums (far left and center background), and the conveyor system (center) at the Metro Container Corporation site. Note the black staining on the ground surface (left foreground) and the numerous drums strewn on the ground surface.

Photograph Interpretation by [REDACTED] CPG, PG; Photograph Dates: January 23, 1989

AR100237

**Former Metro Container Corporation Site, Trainer, Pennsylvania**  
**Site Characterization Photograph Log – January 1989**

Photo Metro-Trainer.89-05: View to the west-northwest of the conveyor system used to transport drums into the drum reclaiming building (located to the far left, not pictured). This system was installed between 1979 and 1985; it appears that the standard practice was to offload drums directly onto the conveyor system from trailers that delivered drums to the site. The current ConocoPhillips Company oil refinery is present in the far background, although at this time, the refinery was owned by the BP Oil Company. Note the numerous stockpiled drums in the background, a small sampling of the more than 60,000 drums present on-site at the time of the USEPA takeover of the site in September 1988. Of the more than 670 companies who sent drums to the Metro Container Corporation site, five companies were culled from this list as contributing the vast majority of drums; these companies were BP America, Inc., Arco Chemical Company, Mobil Corporation, Sun Refining and Marketing Company, and E.I. du Pont de Nemours & Company. A rough accounting of the numbers of drums that these five companies sent to Metro Container between the years of 1985 and 1987 totals over 360,000 drums.

**Former Metro Container Corporation Site, Trainer, Pennsylvania  
Site Characterization Photograph Log – January 1989**

Photo Metro-Trainer.89-06: Close-up view to the northwest of Photo Metro-Trainer.89-05.

Photo Metro-Trainer.89-07: Close-up view to the west of Photo Metro-Trainer.89-05. At the height of its functional operations under Metro Container Corporation, approximately 450,000 to 500,000 drums per year, many filled with hazardous materials, paints, solvents, petroleum products, and other substances, would arrive at the facility and be stored in this general location prior to being conveyed into the drum reconditioning building.

**Former Metro Container Corporation Site, Trainer, Pennsylvania**  
**Site Characterization Photograph Log – January 1989**

Photo Metro-Trainer.89-08: View to the southwest of the concrete holding tank and its secondary containment at the Metro Container Corporation site. Note the stockpiled drums (left background) and the light brown plywood wall (far right background behind the low pile of light blue drums) that was installed by a USEPA subcontractor between October-December 1988 to prevent sludge and other waste material from flowing off-site directly into Stony Creek, located just beyond the plywood wall. This concrete holding tank was 50 feet long, 20 feet wide, and 13 foot deep and was used initially as part of the wastewater aeration process, but was subsequently commissioned to hold untreated wastewater and sludges when the site operations began to fail in the 1980s. This concrete tank played a significant role in bringing the Metro Container Corporation site to the attention of regulatory agencies due to a major release event on February 18, 1986. On that day, the top portion of the tank failed and combined with several heavy rain events, waste liquids overtopped the secondary containment and flowed into Stony Creek resulting in a Coast Guard Notice of Federal Interest in a Pollution Incident Report being filed against the site. This concrete tank was an original Stauffer Chemical Company, Inc. structure, and it appears to have been used as tank storage compartment under Joseph A. Reis Company ownership of the site (1963-1969). The BP Oil Company Stony Creek Guard Basin is visible in the upper right hand corner of the photograph.

**Former Metro Container Corporation Site, Trainer, Pennsylvania  
Site Characterization Photograph Log – January 1989**

Photo Metro-Trainer.89-09: View to the southwest of waste liquids in the secondary containment of the concrete holding tank. At this time, the concrete holding tank was estimated to have contained approximately 180,000 gallons of water and sludge; the secondary containment surrounding the concrete holding tank contained waste material, including sludge, estimated to be 25,000 gallons in volume (the sludge waste was described as originating from the petroleum and paint industries). During this time period, the waste in the concrete holding tank consisted of three layers, an oily layer of debris, a water phase, and an underlying heavy oil sludge layer. The closure of this tank and its secondary containment was accomplished in the Fall of 1989. All known piping that lead to the concrete holding tank was drained into the tank and these pipes were either plugged/capped or physically removed. The contents of the concrete holding tank were removed and treated prior to off-site disposal. The walls of the concrete holding tank were power-washed and then the tank was filled with two feet of compacted clay, a liner of 30 mil polypropylene, filled to within two feet of the top with soil, covered with two feet of compacted clay, and capped with one foot of soil and seeded with grasses. The liquids and sludges in the secondary containment area were also treated and disposed off-site and the upper one-foot of soil within the containment area was removed.

**Former Metro Container Corporation Site, Trainer, Pennsylvania**  
**Site Characterization Photograph Log – January 1989**

Photo Metro-Trainer.89-10: View to the northwest of the former MW-5 monitoring well (foreground) and the concrete holding tank and secondary containment (background). One of the concrete holding tank circular sumps and one of the tank pump houses are visible in the upper right-hand corner of the photograph.

Photo Metro-Trainer.89-11: View to the south of the concrete holding tank and an associated pump house at the Metro Container Corporation site. Note the thousands of drums laying haphazardly through this section of the property, surrounding the concrete holding tank (foreground) and stacked in the southern corner of the property (background).

**Former Metro Container Corporation Site, Trainer, Pennsylvania  
Site Characterization Photograph Log – January 1989**

Photo Metro-Trainer.89-12: View to the south of hundreds of overturned drums strewn between the concrete holding tank (note the concrete holding tank berm visible on the far right) and the drum reclaiming building (see Photo Metro-Trainer.89-13).

Photo Metro-Trainer.89-13: View to the southeast of the drum reclaiming building (left), formerly the Oven Building under Stauffer Chemical Company, Inc. ownership (1920-1959). Note the hundreds of drums dumped haphazardly through this section of the property, the liquids surrounding the drums, and the Acid Tank Farm (right background), which was used as a de facto waste impoundment by Metro Container Corporation in the late 1980s.

**Former Metro Container Corporation Site, Trainer, Pennsylvania**  
**Site Characterization Photograph Log – January 1989**

Photo Metro-Trainer.89-14: View to the southeast of the sludge drum storage area located west of the drum reclaiming building seen in Photo Metro-Trainer.89-13. The right-hand side of this panoramic view matches up with the left-hand side of Photo Metro-Trainer.89-17. The tanks seen in the background were part of the Acid Tank Farm, which also included an alum tank, a DAF sludge tank, and a waste oil tank; the containment area surrounding these tanks was used as a de facto waste impoundment (see Photo Metro-Trainer.89-22). When site operations began to fail in 1987, primarily due to the disabling of the facility's primary wastewater treatment system and the shut-off of the facility's connection to the nearby industrial wastewater treatment plant (Delcora) because of numerous effluent quality violations, the facility owners opted to fill thousands of 55-gallon drums with sludge after both the concrete holding tank and its associated secondary containment and the secondary containment surrounding the Acid Tank Farm were filled to capacity with sludge and wastewater.

**Former Metro Container Corporation Site, Trainer, Pennsylvania  
Site Characterization Photograph Log – January 1989**

Photo Metro-Trainer.89-15: Close-up view to the southeast of Photo Metro-Trainer.89-14. Note how many of the drum lids were not fully closed, causing sludge to spill out of the drums during precipitation events. Also visible are three acid tanks (far left background), a DAF sludge tank (black tank in center background) and the wastewater treatment plant (right background).

Photo Metro-Trainer.89-16: Close-up view to the southeast of Photo Metro-Trainer.89-14. Also visible is a waste oil tank (black tank in center background).

**Former Metro Container Corporation Site, Trainer, Pennsylvania**  
**Site Characterization Photograph Log – January 1989**

Photo Metro-Trainer.89-17: View to the south of the sludge drum storage area located west of the drum reclaiming building seen in Photo Metro-Trainer.89-13. The left-hand side of this panoramic view matches up with the right-hand side of Photo Metro-Trainer.89-14. The thousands of drums visible in this photograph are located directly on top of the former disposal lagoon that was used by the predecessors-in-interest of Metro Container Corporation (the Joseph A. Reis Company and Universal Container Corporation). These companies used the lagoon to dispose of sludge waste between 1963 and 1972 until the impoundment was finally closed because of repeated violations relating to the intentional discharge of untreated waste into Stony Creek (far right, obscured by the drum piles). The flare present on the BP Oil Company Refinery (currently the ConocoPhillips Trainer Refinery) is visible in the center background.

**Former Metro Container Corporation Site, Trainer, Pennsylvania**  
**Site Characterization Photograph Log – January 1989**

Photo Metro-Trainer.89-18: Close-up view to the south of Photo Metro-Trainer.89-17. Note again the unsecured drum lids that caused sludge to spill out of the drums during precipitation events.

Photo Metro-Trainer.89-19: Close-up view to the south of Photo Metro-Trainer.89-17. Note the drum piles are stacked up to 8 levels high, extending to the right of the photograph directly up to the Stony Creek embankment (far right, not shown).

**Former Metro Container Corporation Site, Trainer, Pennsylvania  
Site Characterization Photograph Log – January 1989**

Photo Metro-Trainer.89-20: Close-up view to the west of the unsecured and damaged 55-gallon drums depicted in Photo Metro-Trainer.89-07.

Photo Metro-Trainer.89-21: Close-up view to the west of the drum piles depicted in Photo Metro-Trainer.89-07. In addition to the thousands of 55-gallon drums processed at Metro Container Corporation site, the facility also accepted 5-gallon buckets of waste, particularly paints and solvents, for disposal.

**Former Metro Container Corporation Site, Trainer, Pennsylvania**  
**Site Characterization Photograph Log – January 1989**

Photo Metro-Trainer.89-22: View to the northeast of the de facto waste impoundment that was originally designed as the secondary containment for the facility's waste oil tank (far left, installed between 1975 and 1979), the wastewater treatment plant (center, installed between 1972 and 1975), and DAF sludge tank (far right, installed between 1975 and 1979). Other tanks within this containment area included three acid tanks that were installed between 1975 and 1985 (far upper right, obscured by the DAF sludge tank) and an alum tank (not pictured); these tanks can be seen more clearly in Photo Metro-Trainer.89-14. When the word "lagoon" is mentioned in the historical regulatory file from this time period, it is not referring to the abandoned disposal lagoon originally constructed by Stauffer Chemical Company, Inc., but either this containment area impoundment or the concrete holding tank depicted in Photo Metro-Trainer.89-08.

**Former Metro Container Corporation Site, Trainer, Pennsylvania  
Site Characterization Photograph Log – January 1989**

Photo Metro-Trainer.89-23: Close-up view to the northeast of Photo Metro-Trainer.89-22, showing the waste oil tank (left) and the primary wastewater treatment plant (upper right).

Photo Metro-Trainer.89-24: Close-up view to the northeast of Photo Metro-Trainer.89-22 of the wastewater treatment plant (center) and DAF sludge tank (far right). Some of the most significant impacts to the subsurface discovered in the 2005 Site Characterization were caused by the sludge waste in this unlined impoundment; note the heavy black staining indicating the high level mark on the primary wastewater treatment plant shed (center).

**Former Metro Container Corporation Site, Trainer, Pennsylvania  
Site Characterization Photograph Log – January 1989**

Photo Metro-Trainer.89-25: Close-up view to the northeast of the berm of the secondary containment impoundment depicted in Photo Metro-Trainer.89-22; note the partially buried drum in the left foreground. Buried drums, used as fill, were discovered in the 2005 Site Characterization underlying the northwestern corner of the property.

Photo Metro-Trainer.89-26: Close-up view to the southeast of the incinerator at Metro Container Corporation site. This may have been part of the furnace treatment process (essentially thermal neutralization) that was utilized to remove the exterior paint on the drums and also to prepare unsalvageable drums and buckets for the scrap metal market.

**Former Metro Container Corporation Site, Trainer, Pennsylvania**  
**Site Characterization Photograph Log – January 1989**

Photo Metro-Trainer.89-27: View to the south of the former MW-6 monitoring well, located on the perimeter of the former disposal lagoon; groundwater impacts were noted as early as 1981 in this and other monitoring wells on the property, but no action was taken to correct the source of the contamination. The security chain-link fence installed by a USEPA subcontractor in September 1988 is visible in the background.

Photo Metro-Trainer.89-28: View to the northwest of several 55-gallon drums along the bank of Stony Creek, either accidentally toppled from a drum pile or dumped there by Metro Container Corporation personnel.

**Former Metro Container Corporation Site, Trainer, Pennsylvania  
Site Characterization Photograph Log – January 1989**

Photo Metro-Trainer.89-29: View to the north-northwest of crushed 55-gallon drums within the embankment of Stony Creek; historical documents indicate that Metro Container Corporation conducted unpermitted landfilling of concrete debris and drums throughout this area in 1985, and subsequently ignored regulatory directives to remove the material.

Photo Metro-Trainer.89-30: View of Stony Creek embankment and the characteristic red-orange staining of sediment often associated with the liquid seeps emanating from the Metro Container Corporation facility into Stony Creek.

**Trainer Industries, LLC/Former Metro Container Corporation Site  
Trainer, Pennsylvania  
Site Characterization Photograph Log - 2004**

Photo Metro-Trainer.001: View to the northwest of the entrance to the Trainer Industries, LLC/former Metro Container Corporation site and the renovated Office Building (left) that is located on the eastern portion of the 8.16-acre parcel on the western side of Price Street. This office building was constructed by the Stauffer Chemical Company, Inc. early in their occupancy of the property between 1920-1959 and is currently occupied by the Trainer Industries, LLC staff. See Photo Metro-Trainer.89-01 for a view of this building and vicinity during Metro Container Corporation ownership. Under Stauffer Chemical Company, Inc. ownership, three large aboveground storage tanks were present in the area to the far left, but these tanks were removed when the site became a drum reconditioning facility in 1963.

**Trainer Industries, LLC/Former Metro Container Corporation Site  
Trainer, Pennsylvania  
Site Characterization Photograph Log - 2004**

Photo Metro-Trainer.002: View to the southwest of the Trainer Industries, LLC/former Metro Container Corporation site showing all the principal extant buildings. The renovated office building and former locker room are visible to the far right (now connected by a recently constructed breezeway) and the large former drum reclaiming building occupies the left and center of the photograph. The blue protective casing of monitoring well MW-2 is visible in the foreground. The ConocoPhillips Trainer Refinery is visible in the center and right background.

**Trainer Industries, LLC/Former Metro Container Corporation Site  
Trainer, Pennsylvania  
Site Characterization Photograph Log - 2004**

Photo Metro-Trainer.003: View to the southeast of the former drum reclaiming building at the Trainer Industries, LLC/former Metro Container Corporation site. The concrete saddle and secondary containment basin of a former aboveground storage tank containing toluol (toluene) is visible to the far left. Although this building is largely abandoned, the current owner stores solvents, fuels, and paints in the small wing of the building in the center of the photograph (which served the same function under Metro Container Corporation ownership) and in the large brick wing of the building (far right).

**Trainer Industries, LLC/Former Metro Container Corporation Site  
Trainer, Pennsylvania  
Site Characterization Photograph Log - 2004**

Photo Metro-Trainer.004: View to the southeast of the former drum reclaiming building at the Trainer Industries, LLC/former Metro Container Corporation site. The current owner stores solvents, fuels, and paints in the brick wing of the building (far left). Other ancillary equipment of the current owner is stored around the property, including ladders and trailers (left), gas cylinders (center), and trash/debris (right).

**Trainer Industries, LLC/Former Metro Container Corporation Site  
Trainer, Pennsylvania  
Site Characterization Photograph Log - 2004**

Photo Metro-Trainer.005: View to the northeast of the western facing side of the former drum reclaiming building at the Trainer Industries, LLC/former Metro Container Corporation site. The current owner utilizes this portion of the property to sand blast piping in preparation for painting (left); the current owner also utilizes the abandoned, rusty aboveground storage tank (far right) for training employees in confined space work. See Photo Metro-Trainer.89-14 and Photo Metro-Trainer.89-17 for a view of this vicinity during Metro Container Corporation ownership. The stressed vegetation in the foreground may be due to the accumulation of paint chips and sand blast grit in the near subsurface soils, the releases of wastes and sludges from thousands of improperly stored 55-gallon drums during Metro Container Corporation ownership, and/or the poor quality of the fill material overlying the former disposal lagoon at this location. An abandoned tank foundation is present to the extreme right of the photograph in the grassy area near the rusting tank. According to historical aerial photographs, a tank was present here directly adjacent to the disposal lagoon throughout the 1960s, but was removed prior to the construction of the Metro Container Corporation primary wastewater treatment plant circa 1972 (see Photo Metro-Trainer.89-14).

**Trainer Industries, LLC/Former Metro Container Corporation Site  
Trainer, Pennsylvania  
Site Characterization Photograph Log - 2004**

Photo Metro-Trainer.006: View to the north of the former drum reclaiming building at the Trainer Industries, LLC/former Metro Container Corporation site. Although the site in general has been cleared of debris from the former drum reconditioning operations, rubble and discarded equipment (center of photograph) can still be found outside and inside the former drum reclaiming building. The vegetation visible in this photograph approximates the general location of two waste oil aboveground storage tanks and two caustic aboveground storage tanks that were present during Metro Container Corporation ownership (see Photo Metro-Trainer.89-13).

**Trainer Industries, LLC/Former Metro Container Corporation Site  
Trainer, Pennsylvania  
Site Characterization Photograph Log - 2004**

Photo Metro-Trainer.007: View to the north of the former drum reclaiming building at the Trainer Industries, LLC/former Metro Container Corporation site. Several empty aboveground storage tanks were observed in the vicinity of the building, including the blue tank visible in the center of the photograph. The blue casing of damaged monitoring well MW-9 (partially obscured by the orange traffic cone) is visible in the center of the photograph. This corner of this building was the location of the incinerator that operated under Metro Container Corporation ownership (see Photo Metro-Trainer.89-26).

**Trainer Industries, LLC/Former Metro Container Corporation Site  
Trainer, Pennsylvania  
Site Characterization Photograph Log - 2004**

Photo Metro-Trainer.008: View to the northwest of the former drum reclaiming building at the Trainer Industries, LLC/former Metro Container Corporation site. The accumulation of sand was particularly prevalent on this side of the building, suggesting that this was the original location of sand blasting activities by the current owner. The following two photographs (Photo Metro-Trainer.009 and Metro-Trainer.010) were taken inside the small area visible through the breach on the outer brick wall (center of the photograph). It was noted in historical regulatory documents that this wall of the building was not demolished by the cleanup activities that occurred between 1988-1990, but rather by heavy storm winds on November 11, 1989. The loss of the roof was a result of a major fire on the evening of January 29, 1987 that tore through this building after a worker accidentally dropped a torch into a paint bucket. The heat of the blaze was so intense that the metal roof of the building was destroyed. It took 100 firefighters from eight different fire companies to control the fire.

**Trainer Industries, LLC/Former Metro Container Corporation Site  
Trainer, Pennsylvania  
Site Characterization Photograph Log - 2004**

Photo Metro-Trainer.009: View to the west of the former drum reclaiming building at the Trainer Industries, LLC/former Metro Container Corporation site. The current owner utilizes this area for trailer and pipe storage. Historical documents indicate that this was the location where “open top” drums were reconditioned. The roof over this portion of the building was lost to fire on the evening of January 29, 1987.

**Trainer Industries, LLC/Former Metro Container Corporation Site  
Trainer, Pennsylvania  
Site Characterization Photograph Log - 2004**

Photo Metro-Trainer.010: View to the north of the former drum reclaiming building at the Trainer Industries, LLC/former Metro Container Corporation site. The current owner utilizes this area for timber and cinder block storage. It is not known if the corroded 55-gallon drum (left center) and the black drum covers (right, on the elevated platform) are remnants of the former drum reclaiming operations at the site.

**Trainer Industries, LLC/Former Metro Container Corporation Site  
Trainer, Pennsylvania  
Site Characterization Photograph Log - 2004**

Photo Metro-Trainer.011: View to the west of the southeastern corner of the concrete block annex to former drum reclaiming building at the Trainer Industries, LLC/former Metro Container Corporation site. This annex was constructed under the Joseph A. Reis Company ownership of the property (1963-1969) and was utilized as a warehouse and loading dock for shipping out reconditioned 55-gallon drums. The current owner utilizes this outside area for trailer storage. The inside of this portion of the building can be seen in Photo Metro-Trainer.021.

**Trainer Industries, LLC/Former Metro Container Corporation Site  
Trainer, Pennsylvania  
Site Characterization Photograph Log - 2004**

Photo Metro-Trainer.012: View to the south of the warehouse and loading dock annex to the former drum reclaiming building at the Trainer Industries, LLC/former Metro Container Corporation site. The current owner utilizes this area for pipe storage (foreground). It also appears that the current owner utilizes the inside area of this portion of the building as a sheltered location for painting operations. The inside of this portion of the building can be seen in Photo Metro-Trainer.021.

**Trainer Industries, LLC/Former Metro Container Corporation Site  
Trainer, Pennsylvania  
Site Characterization Photograph Log - 2004**

Photo Metro-Trainer.013: View to the south of a room located inside the northwest corner of the former drum reclaiming building at the Trainer Industries, LLC/former Metro Container Corporation site. From appearances, this may have been the boiler room during the time of the Stauffer Chemical Company, Inc. operations (1920-1959) and subsequent drum reclaiming operations under Joseph A. Reis Company, Universal Container, and Metro Container Corporation ownership. The current owner utilizes this section of the building for equipment and drum storage.

**Trainer Industries, LLC/Former Metro Container Corporation Site  
Trainer, Pennsylvania  
Site Characterization Photograph Log - 2004**

Photo Metro-Trainer.014: View to the west of the former boiler room located inside the northwest corner of the Trainer Industries, LLC/former drum reclaiming building at the former Metro Container Corporation site. Note the dark-colored (due to sediment fill) channels cut into the concrete floor in the foreground; it is surmised that these channels conveyed waste and other materials during the drum reclaiming operations conducted on the site between 1963-1988. The current owner utilizes this section of the building for equipment and trash storage. See Photo Metro-Trainer.041 for another view of this room during the August 2005 Site Characterization sampling.

**Trainer Industries, LLC/Former Metro Container Corporation Site  
Trainer, Pennsylvania  
Site Characterization Photograph Log - 2004**

Photo Metro-Trainer.015: View to the southwest inside the former drum reclaiming building at the Trainer Industries, LLC/former Metro Container Corporation site. This entire building (referred to as the “Oven Building” under Stauffer Chemical Company, Inc. ownership) is subdivided up into several subrooms, including this large former “oven room.” This room (see other views on Photos Metro-Trainer.016 and .017) runs the entire length of the original building (excluding the warehouse and loading dock annex) and was the principal locations of the former Stauffer Chemical Company, Inc. (1920-1959) chemical operations and the former Joseph A. Reis Company, Universal Container, and Metro Container Corporation “closed top” drum reconditioning (1963-1988) operations. The current owner utilizes this area for equipment storage (hoses, compressors, etc.) and trash.

**Trainer Industries, LLC/Former Metro Container Corporation Site  
Trainer, Pennsylvania  
Site Characterization Photograph Log - 2004**

Photo Metro-Trainer.016: View to the southwest of the former “oven room” inside the former drum reclaiming building at the Trainer Industries, LLC/former Metro Container Corporation site. At the height of its functional operations under Metro Container Corporation, drums filled with hazardous materials, paints, solvents, petroleum products, and other substances would be conveyed into the building via a conveyor (see Photo Metro-Trainer.89-05) where they were emptied into large tanks/vessels and pre-flushed prior to caustic being applied to the exterior of the drums to strip off the paint. The outside of the drums were then rinsed before two cycles of interior cleaning using caustic and two cycles of hot rinsing was performed. Following the caustic cleaning, two cycles of interior metal stripping was performed using HCl followed by two cycles of cold rinsing. After phosphatizing, siphoning, drying, de-denting, short blasting, and leak testing were performed, the drums were dried, repainted, baked, and moved to the warehouse before shipment to customers. Most of the tanks and vessels used in this operation were removed during the 1989 Responsible Party removal actions. The current owner utilizes this area for vehicle, air compressor, hose, timber, cinder block, and ancillary equipment storage.

**Trainer Industries, LLC/Former Metro Container Corporation Site  
Trainer, Pennsylvania  
Site Characterization Photograph Log - 2004**

Photo Metro-Trainer.017: View to the northeast of the former “oven room” inside the former drum reclaiming building at the Trainer Industries, LLC/former Metro Container Corporation site with the warehouse and loading dock annex visible through the opening in the far center background. This room still contained some abandoned equipment related to the former drum reconditioning operations when it was observed during a reconnaissance by the author at the time of the Trainer Refinery due diligence (Nov. 1995-Feb 1996). According to regulatory files, floor drains were present in this room that were hard-piped into the stormwater drainage system that lead directly to an outfall on Stony Creek; during Metro Container Corporation’s operations in the 1980s, there were several releases to these floor drains that reached the creek (e.g., February 18, 1986). The drains were ultimately grouted to prevent further impact to surface waters. The current owner utilizes this area for vehicle, air compressor, hose, timber, cinder block, and ancillary equipment storage.

**Trainer Industries, LLC/Former Metro Container Corporation Site  
Trainer, Pennsylvania  
Site Characterization Photograph Log - 2004**

Photo Metro-Trainer.018: View to the west of the former “oven room” inside the former drum reclaiming building at the Trainer Industries, LLC/former Metro Container Corporation site. The channel in the foreground was the end point for the in-building conveyance of waste from the drum reclaiming operations; from this point, it is surmised that the waste liquids were conveyed via underground pipelines (see Photos Metro-Trainer.065 and Metro-Trainer.066) through a screen box into a settling tank and then directly into the former disposal lagoon between 1963 and 1972. Sometime after 1972, the effluent was rerouted to the primary wastewater treatment plant and then to the former concrete holding tank located to the west of this building (perhaps through the pipes depicted in Photo Metro-Trainer.063). The current owner utilizes this area for vehicle, air compressor, hose, timber, block, and ancillary equipment storage.

**Trainer Industries, LLC/Former Metro Container Corporation Site  
Trainer, Pennsylvania  
Site Characterization Photograph Log - 2004**

Photo Metro-Trainer.019: View to the northeast of the former “oven room” inside the former drum reclaiming building at the Trainer Industries, LLC/former Metro Container Corporation site. According to historical regulatory files, approximately 80% of the drums received at the facility contained a petroleum product; the other 20% contained chemicals and other products. The drums containing these two classes of residual waste were dumped into two separate tanks inside this room. On February 18, 1986, the non-petroleum tank was so full that after dumping the contents of additional drums into it, the tank overflowed onto the floor and into a floor drain/channel system (far left) that was also connected to stormwater piping that lead directly to Stony Creek. The current owner utilizes this area for vehicle, air compressor, hose, timber, block, and ancillary equipment storage. The general condition of the fire-damaged roof is well represented in this photograph.

**Trainer Industries, LLC/Former Metro Container Corporation Site  
Trainer, Pennsylvania  
Site Characterization Photograph Log - 2004**

Photo Metro-Trainer.020: View to the south inside the southwest corner of the former drum reclaiming building at the Trainer Industries, LLC/former Metro Container Corporation site. This room was referenced as containing “Storage of Raw Stock” during the Stauffer Chemical Company, Inc. ownership (1920-1959). This room may have been subsequently utilized for spray painting the reclaimed 55-gallon drums during Joseph A. Reis Company, Universal Container, and Metro Container Corporation operations. Historical documentation also indicates that this room was the location of two used caustic aboveground storage tanks. Attempts to drill through the floor of this room during the August 2005 Site Characterization investigation were unsuccessful; it is not known if this is the room where rusting 55-gallon drums containing hazardous substances were buried and then covered with a concrete floor to conceal them, information that came to light in the 1991-1992 trial of the Metro Container Corporation’s CEO, President, and Maintenance Supervisor. The current owner utilizes this area for trash storage.

**Trainer Industries, LLC/Former Metro Container Corporation Site  
Trainer, Pennsylvania  
Site Characterization Photograph Log - 2004**

Photo Metro-Trainer.021: View to the north inside the southeast corner of the former drum reclaiming building at the Trainer Industries, LLC/former Metro Container Corporation site. This addition was constructed under the Joseph A. Reiss Company ownership of the property (1963-1969) and was utilized as a warehouse and loading dock for shipping out reconditioned 55-gallon drums. This may also be the room where rusting 55-gallon drums containing hazardous substances were buried and then covered with a concrete floor to conceal them. It appears that the current owner utilizes this portion of the building as a sheltered location for painting operations. The outside of this former warehouse and loading dock can be seen in Photos Metro-Trainer.011 and Metro-Trainer.012.

Site Characterization Photograph Log - 2004**

Photo Metro-Trainer.024: View to the south inside the smaller building wing on the northern side of the former drum reclaiming building (see Photo Metro-Trainer.003) at the Trainer Industries, LLC/former Metro Container Corporation site. The current owner also uses this room for the storage of numerous chemicals and paints in support of their painting operations; this room served that same function under Metro Container Corporation ownership.

**Trainer Industries, LLC/Former Metro Container Corporation Site  
Trainer, Pennsylvania  
Site Characterization Photograph Log - 2004**

Photo Metro-Trainer.025: View to the southwest of the northern portion of the 8.16-acre parcel at the Trainer Industries, LLC/former Metro Container Corporation site. This area was used to store thousands of 55-gallon drums, many of them still filled with sludge, during the operations of the former drum reconditioning operations conducted by the Joseph A. Reis Company (1963-1968), Universal Container Corporation (1968-1983), and Metro Container Corporation (1983-1988); see Photo Metro-Trainer.89-04 and Photo Metro-Trainer.89-05 for a view of this area in January 1989. As depicted on Photos Metro-Trainer.89-05 through Metro-Trainer.89-07, a conveyor system (now dismantled) was present in this location; this system was used to transport drums from this storage yard into the former drum reclaiming building (far left, not pictured). The ConocoPhillips Trainer Refinery is visible in the background, including the refinery main flare (far left).

**Trainer Industries, LLC/Former Metro Container Corporation Site  
Trainer, Pennsylvania  
Site Characterization Photograph Log - 2004**

Photo Metro-Trainer.026: View to the northwest of the northern portion of the 8.16-acre parcel at the Trainer Industries, LLC/former Metro Container Corporation site. This area was the site of the former lagoon that was constructed between 1953 and 1959, late in the ownership tenure of the Stauffer Chemical Company, Inc., presumably for the disposal of wastewater and off-spec products. Estimates of the original size of the disposal lagoon vary, but in regulatory historical documents, the lagoon is often estimated to be 0.5 acres in size. In the March 16, 1959, April 22, 1965, and April 8, 1970 aerial photographs, the lagoon appears to be roughly square in size with its western end being only a few feet away from Stony Creek. The earliest recorded violation issued against drum reconditioning operations at this site was related to the lagoon; on June 1, 1965, a telegram was sent to the Joseph A. Reis Company ordering them to cease discharging untreated waste directly into Stony Creek. On April 3, 1969, the Pennsylvania Department of Health (PADH) noted that Universal Container, only two months after they took ownership of the site, cut a trench into the lagoon allowing liquid waste to flow directly into Stony Creek. It is surmised that until 1972, the disposal lagoon was used for disposal of the drum contents under Joseph A. Reis Company (1963-1968) and Universal Container Corporation (1968-1983) ownership. This area was subsequently used by Metro Container Corporation for the improper storage of thousands of leaking, uncovered 55-gallon drums that contained sludges and other waste products (see Photo Metro-Trainer.89-17). The blue protective casing of monitoring well MW-6 is visible in the foreground.

**Trainer Industries, LLC/Former Metro Container Corporation Site  
Trainer, Pennsylvania  
Site Characterization Photograph Log - 2004**

Photo Metro-Trainer.027: View to the northeast of the western portion of the 8.16-acre parcel at the Trainer Industries, LLC/former Metro Container Corporation site. The former drum reclaiming building is visible in the background. This area was the general location of the former disposal lagoon. When the partially filled lagoon was observed in 1982, it was approximately 5,000 square feet (or 0.12 acres) in size. This area was subsequently used by Metro Container Corporation for the improper storage of thousands of leaking, uncovered 55-gallon drums that contained sludges and other waste products (see Photo Metro-Trainer.89-14); additionally, the area to the far right background (near the rusted storage tank) was the location of a de facto sludge and waste impoundment that was originally designed as the secondary containment for the facility's waste oil tank, wastewater treatment plant, DAF sludge tank, three acid tanks and an alum tank (see Photo Metro-Trainer.89-14 and Photo Metro-Trainer.89-22).

**Trainer Industries, LLC/Former Metro Container Corporation Site  
Trainer, Pennsylvania  
Site Characterization Photograph Log - 2004**

Photo Metro-Trainer.028: View to the west of the western portion of the 8.16-acre parcel at the Trainer Industries, LLC/former Metro Container Corporation site. The trees in the center of the photograph mark the location of a former concrete holding tank, which was an original Stauffer Chemical Company, Inc. structure; in an April 22, 1965 and April 8, 1970 aerial photographs, this structure appears to have been used as tank storage compartment. Subsequently, this 50-foot long, 20-foot wide, and 13-foot deep structure was used initially as part of the wastewater treatment aeration process when the primary wastewater treatment operations began in circa 1972, but was later commissioned to hold untreated wastewater and sludges when the site operations began to fail (see Photo Metro-Trainer.89-08 and Photo Metro-Trainer.89-11). Stony Creek is located just beyond the row of trees; seeps of contaminated groundwater emanating from the site had been noted in Stony Creek during the time of active operations under Metro Container Corporation ownership and during the 1995-1996 Tosco/ConocoPhillips due diligence of the adjacent refinery. The blue protective casing of monitoring well MW-5 is visible in the center of the photograph. On the opposite side of this former holding tank is monitoring well MW-8. Process units on the ConocoPhillips Trainer Refinery are visible in the background.

**Trainer Industries, LLC/Former Metro Container Corporation Site  
Trainer, Pennsylvania  
Site Characterization Photograph Log - 2004**

Photo Metro-Trainer.029: View to the south of the elevated ground surface covering the former concrete holding tank at the Trainer Industries, LLC/former Metro Container Corporation site (see Photo Metro-Trainer.89-08 and Photo Metro-Trainer.89-11). The partial collapse of the aboveground portion of this holding tank and the subsequent release of waste into Stony Creek on February 18, 1986 triggered the regulatory intervention that ultimately lead to the closing of the drum reconditioning operations in 1988 and the extensive drum removal actions that followed in 1989. The flare pictured in the background is associated with the ConocoPhillips Trainer Refinery.

**Trainer Industries, LLC/Former Metro Container Corporation Site  
Trainer, Pennsylvania  
Site Characterization Photograph Log - 2004**

Photo Metro-Trainer.030: View to the northwest of the western portion of the 8.16-acre parcel at the Trainer Industries, LLC/former Metro Container Corporation site. This area was used for the storage of thousands of 55-gallon drums and 5-gallon buckets (see Photos Metro-Trainer.89-05, Metro-Trainer.89-20, and Metro-Trainer.89-21) during the operations of the former drum reconditioning operations conducted by the Joseph A. Reis Company (1963-1968), Universal Container Corporation (1968-1983), and Metro Container Corporation (1983-1988). A partially buried crushed drum was observed in this area during the August 2004 site reconnaissance. The area visible to the far right background was the location of the EM-61 geophysical results that indicated intense magnetic field readings indicative of buried 55-gallon drums or other metallic objects. Subsequent test trenching in September 2005 encountered crushed drums and drum lids between 3 to 5 feet below ground surface (see Photos Metro-Trainer.051 through Metro-Trainer.058).

**Trainer Industries, LLC/Former Metro Container Corporation Site  
Trainer, Pennsylvania  
Site Characterization Photograph Log - 2004**

Photo Metro-Trainer.031: View to the south of the western portion of the site (west of the former drum reclaiming building) at the Trainer Industries, LLC/former Metro Container Corporation site. The current owner utilizes this portion of the property to sand blast piping in preparation for painting (center). See Photo Metro-Trainer.89-17 for a view of this area when it was used for the improper storage of thousands of leaking and unsecured 55-gallon drums under Metro Container Corporation ownership.

**Trainer Industries, LLC/Former Metro Container Corporation Site  
Trainer, Pennsylvania  
Site Characterization Photograph Log - 2004**

Photo Metro-Trainer.032: View to the north of the 2.25-acre parcel at the Trainer Industries, LLC/former Metro Container Corporation site, located northeast of the office (Photo Metro-Trainer.001). This area was used to storage thousands of 55-gallon drums during the operations of the former drum reconditioning operations conducted by the Joseph A. Reis Company (1963-1968), Universal Container Corporation (1968-1983), and Metro Container Corporation (1983-1988). This area was covered with gravel just prior to this photograph being taken in preparation of its use as a parking lot and equipment laydown area. The Responsible Parties (BP America, Inc., Arco Chemical Company, Mobil Corporation, Sun Refining and Marketing Company, and E.I. du Pont de Nemours & Company) that were required to perform the removal action at the site in 1989 mistakenly referred to this parcel as the AMF parcel, when in fact it was always part of the Metro Container Corporation facility.

**Trainer Industries, LLC/Former Metro Container Corporation Site  
Trainer, Pennsylvania  
Site Characterization Photograph Log - 2005**

Photo Metro-Trainer.033: View to the southeast of the green PVC discharge pipe into Stony Creek at the Trainer Industries, LLC/former Metro Container Corporation site. This pipe is often mentioned in historical regulatory documents as the source of numerous releases to the environment under Metro Container Corporation ownership. On February 12, 1988, the U.S. Coast Guard traced a hydrocarbon release observed in the Delaware River back to the Metro Container Corporation facility, where an oily substance was running off the facility and liquid was observed discharging from this pipe.

**Trainer Industries, LLC/Former Metro Container Corporation Site  
Trainer, Pennsylvania  
Site Characterization Photograph Log - 2005**

Photo Metro-Trainer.034: View to the east of the green PVC discharge pipe into Stony Creek at the Trainer Industries, LLC/former Metro Container Corporation site. When challenged by regulatory agencies regarding the source of the liquids often observed discharging from this pipe, Metro Container Corporation management claimed that it was only a permitted stormwater outfall. However, a discharge to Stony Creek on February 18, 1986 from this outfall revealed that floor drains in the main drum reclaiming building were directly connected to the stormwater drainage system.

**Trainer Industries, LLC/Former Metro Container Corporation Site  
Trainer, Pennsylvania  
Site Characterization Photograph Log - 2005**

Photo Metro-Trainer.035: Close-up view to the east of a seep underlying the green PVC discharge pipe into Stony Creek at the Trainer Industries, LLC/former Metro Container Corporation site. This same seep was noted on February 19, 1988 by USEPA; it was stated at that time that this discharge point was emitting a red-orange material and creating sheens on surface water when disturbed. Analytical results at that time indicated high concentrations of lead, chromium, and zinc along with phenols. Another site reconnaissance on August 23, 1990 by USEPA subcontractors again noted this orange seep discharging below this drainage pipe. During the 2005 Site Characterization work, sediment sample 05-METS-05 was collected at this location. These types of seeps were consistently noted along the embankment of Stony Creek during Metro Container Corporation ownership (see Photo Metro-Trainer.89-30).

**Trainer Industries, LLC/Former Metro Container Corporation Site  
Trainer, Pennsylvania  
Site Characterization Photograph Log - 2005**

Photo Metro-Trainer.036: View to the north of a second surface water outfall to Stony Creek at the Trainer Industries, LLC/former Metro Container Corporation site. Historical regulatory documents are unclear about whether this second outfall was recognized as a Metro Container Corporation outfall and whether it was a source of contaminant discharge. This outfall has a more consistent and steady discharge of liquid than the flow observed from the green PVC pipe.

**Trainer Industries, LLC/Former Metro Container Corporation Site  
Trainer, Pennsylvania  
Site Characterization Photograph Log - 2005**

Photo Metro-Trainer.037: Close-up view to the north of the second surface water outfall to Stony Creek at the Trainer Industries, LLC/former Metro Container Corporation site depicted in Photo Metro-Trainer.036. The corrugated HDPE pipe observed at this outfall is very similar in appearance to pipes observed leading away from the on-site catch basins, suggesting that this outfall is actually the stormwater discharge point for the site. During their last visit to the site on March 31, 2000, the USEPA stated that because there had been no reconfiguration of the stormwater collection/discharge system, it was very probable that contamination was still being discharged off-site by stormwater runoff. During the 2005 Site Characterization work, sediment sample 05-METS-06 was collected at this location.

**Trainer Industries, LLC/Former Metro Container Corporation Site  
Trainer, Pennsylvania  
Site Characterization Photograph Log - 2005**

Photo Metro-Trainer.038: View to the east of abandoned piping at the Trainer Industries, LLC/former Metro Container Corporation site. It is surmised that this piping was part of the USEPA containment action implemented in October 1988 that consisted of a 300-foot long retaining plywood wall (see Photo Metro-Trainer.89-08) that was erected to serve as physical barrier to overland material migration to Stony Creek in the event of a catastrophic release from the concrete holding tank (upper center of the photograph). Because this plywood wall began to buckle about a month after it was installed, resulting in an increasing volume of seepage at the base of the wall, during December 1988, the wall was reconstructed and an underflow piping system (two 6-inch diameter valved pipes) were installed at the base of the wall to allow accumulated rainwater to be drained into Stony Creek. By appearances, this pipe fits the description of the type of underflow piping that was used by the USEPA subcontractor to relieve hydraulic pressure behind the plywood wall.

**Trainer Industries, LLC/Former Metro Container Corporation Site  
Trainer, Pennsylvania  
Site Characterization Photograph Log - 2005**

Photo Metro-Trainer.039: View to the east of the former “oven room” inside the former drum reclaiming building at the Trainer Industries, LLC/former Metro Container Corporation site. Since the time of the initial site inspection in August 2004, the current owner began to utilize this portion of the building for the storage of unused paint and other unknown waste substances. Sample location 05-MET-66 was moved to this location to ascertain whether this storage caused any adverse impacts. The Metro Container Corporation warehouse and loading dock annex (see Photo Metro-Trainer.021) is visible through the opening in the upper left-hand corner of the photograph.

**Trainer Industries, LLC/Former Metro Container Corporation Site  
Trainer, Pennsylvania  
Site Characterization Photograph Log - 2005**

Photo Metro-Trainer.040: View to the northeast of the same area depicted in Photo Metro-Trainer.009, the location of the “open top” drum reclaiming operations, within the confines of the former drum reclaiming building at the Trainer Industries, LLC/former Metro Container Corporation site. The presence of vegetation in the waste conveyance channels makes the trend of this former drainage system very evident. The orange stake in the foreground marks the location of the 05-MET-68 soil boring location.

**Trainer Industries, LLC/Former Metro Container Corporation Site  
Trainer, Pennsylvania  
Site Characterization Photograph Log - 2005**

Photo Metro-Trainer.041: View to the west of the same former boiler room depicted in Photo Metro-Trainer.014 within the confines of the former drum reclaiming building at the Trainer Industries, LLC/former Metro Container Corporation site. The orange stake in the foreground marks the location of the 05-MET-58 soil boring location at the intersection of several floor channels that conveyed waste and other materials during the drum reclaiming operations conducted on the site between 1963-1988.

**Trainer Industries, LLC/Former Metro Container Corporation Site  
Trainer, Pennsylvania  
Site Characterization Photograph Log - 2005**

Photo Metro-Trainer.042: View to the northeast of the same former “oven room” depicted in Photo Metro-Trainer.019, the location of the “closed top” drum reclaiming operations, inside the former drum reclaiming building at the Trainer Industries, LLC/former Metro Container Corporation site. The orange stake in the left foreground marks the location of the 05-MET-61 soil boring location at the end of the extensive floor channel system that conveyed waste and other materials during the drum reclaiming operations conducted on the site between 1963-1988.

Trainer, Pennsylvania  
Site Characterization Photograph Log - 2005**

Photo Metro-Trainer.043: View of the center section of the Geoprobe<sup>®</sup> soil cores extracted from the 05-MET-061 location at the Trainer Industries, LLC/former Metro Container Corporation Site. The light colored material in the 0-5 ft below ground surface (bgs) interval represents the degraded concrete that lined the bottom of the floor channels. The interval underlying the degraded concrete, including most of the 5-10 ft bgs interval, was comprised of anthropogenic gravel and slag saturated with non-aqueous phase liquids (NAPL), which also had migrated vertically into the fractures of the underlying native Cape May Formation silt (10-15 ft bgs interval).

**Trainer Industries, LLC/Former Metro Container Corporation Site  
Trainer, Pennsylvania  
Site Characterization Photograph Log - 2005**

Photo Metro-Trainer.044: Close-up view of the center section of the Geoprobe<sup>®</sup> soil cores extracted from the 05-MET-061 location at the Trainer Industries, LLC/former Metro Container Corporation Site. The 5-10 ft bgs interval, comprised of anthropogenic gravel and slag, was saturated with non-aqueous phase liquids (NAPL), seen here seeping into the cardboard identification label.

**Trainer Industries, LLC/Former Metro Container Corporation Site  
Trainer, Pennsylvania  
Site Characterization Photograph Log - 2005**

Photo Metro-Trainer.045: View of the bottom section of the upper two Geoprobe<sup>®</sup> soil cores extracted from the 05-MET-103 location, an area used for the improper storage of thousands of leaking and uncovered 55-gallon drums filled with sludge and waste (see Photo Metro-Trainer.89-13), at the Trainer Industries, LLC/former Metro Container Corporation site. The entire 0-8 ft bgs interval was comprised of anthropogenic gravel, sand, slag, concrete, and sludge saturated with non-aqueous phase liquids (NAPL), which registered up to 978 ppm on the field screening PID. This NAPL vertically migrated into the fractures of the underlying native Cape May Formation silt, which had PID reading in excess of 10,000 ppm.

**Trainer Industries, LLC/Former Metro Container Corporation Site  
Trainer, Pennsylvania  
Site Characterization Photograph Log - 2005**

Photo Metro-Trainer.046: View of the top section of the Geoprobe<sup>®</sup> soil cores extracted from the 05-MET-118 location, an area used for the improper storage of thousands of leaking and uncovered 55-gallon drums filled with sludge and waste (see Photo Metro-Trainer.89-18), at the Trainer Industries, LLC/former Metro Container Corporation site. The light colored material in upper portion of the 0-5 ft bgs interval represents soil used to cover this location after the completion of the 1989 removal action. The entire 5-10 ft bgs interval was comprised of anthropogenic coke, slag, and sludge saturated with non-aqueous phase liquids (NAPL), which registered up to 1,584 ppm on the field screening PID. This sludge material directly overlies native Cape May Formation silt, seen in the 10-15 ft bgs core interval.

**Trainer Industries, LLC/Former Metro Container Corporation Site  
Trainer, Pennsylvania  
Site Characterization Photograph Log - 2005**

Photo Metro-Trainer.047: View of the top section of the Geoprobe<sup>®</sup> soil cores extracted from the 05-MET-119 location, a former tank containment area that was also used as an unlined waste and sludge impoundment (see Photo Metro-Trainer.89-22), at the Trainer Industries, LLC/former Metro Container Corporation site. The light colored material in upper portion of the 0-5 ft bgs interval represents soil used to cover this location, site of the facility's waste oil tank, wastewater treatment plant, DAF sludge tank, three acid tanks and an alum tank. The 5-10 ft bgs interval was comprised of anthropogenic gravel, coke, and slag, which had strong chemical odor and registered up to 1,469 ppm on the field screening PID. This material directly overlies impacted native Cape May Formation silt, sand, and gravel seen in the 10-15 ft bgs and 15-20 ft bgs core intervals.

**Trainer Industries, LLC/Former Metro Container Corporation Site  
Trainer, Pennsylvania  
Site Characterization Photograph Log - 2005**

Photo Metro-Trainer.048: View to the south of the two known surface water outfalls to Stony Creek at the Trainer Industries, LLC/former Metro Container Corporation site. In the near foreground, identified by the small orange flag (location of the 05-METS-06 sediment sample location), is the outfall depicted on Photo Metro-Trainer.037. In the upper far left of the photograph is the green PVC pipe outfall that was depicted on Photos Metro-Trainer.033, .034, and .035. It is presently unknown which catch basins on the Trainer Industries, LLC property are connected to these outfalls.

**Trainer Industries, LLC/Former Metro Container Corporation Site  
Trainer, Pennsylvania  
Site Characterization Photograph Log - 2005**

Photo Metro-Trainer.049: View to the north of the concealed surface water outfall to Stony Creek at the Trainer Industries, LLC/former Metro Container Corporation site. Because of the dense vegetation, the outfall is somewhat obscured in this photograph; refer to Photos Metro-Trainer.036 and .037 for unobstructed views of this surface water discharge point.

**Trainer Industries, LLC/Former Metro Container Corporation Site  
Trainer, Pennsylvania  
Site Characterization Photograph Log - 2005**

Photo Metro-Trainer.050: Close-up view to the east of the embankment of Stony Creek, comprised primarily of concrete demolition debris and crushed 55-gallon drums at the Trainer Industries, LLC/former Metro Container Corporation site. It is surmised that this fill was used to expand the property westward into the Stony Creek watershed in 1985, a supposition confirmed by the March 6, 1985 aerial photograph and historical regulatory documents that describe an October 7, 1985 site visit by PADER to check on reports that demolition waste was being dumped in close proximity to Stony Creek (see Photo Metro-Trainer.89-29). Despite PADER insistence that fill material dumped within 50 feet of the creek be removed, Metro Container Corporation management ignored this directive.

**Trainer Industries, LLC/Former Metro Container Corporation Site  
Trainer, Pennsylvania  
Site Characterization Photograph Log - 2005**

Photo Metro-Trainer.051: View to the northwest of the commencement of the Test Trench-01 excavation at the Trainer Industries, LLC/former Metro Container Corporation site, in the same general location depicted in Photo Metro-Trainer.89-05. Test trenches were advanced at four different locations at the site based on EM-61 geophysical results showing intense magnetic field readings indicative of 55-gallon drums or other metallic objects in certain areas of the property. The EM-61 was deployed primarily because the former owners of Metro Container Corporation admitted in their trials to instructing employees to bury 55-gallon drums on the property and there was evidence of 55-gallon drums in the embankment of Stony Creek and in the shallow subsurface soils. A historical aerial photograph from March 6, 1985 clearly indicates that Metro Container Corporation was filling in the entire low-lying floodplain of the Stony Creek in the northwestern corner of the site. This trench, which encountered drum lids at 3 ft bgs, was advanced between the 05-MET-01 and 05-MET-129 Geoprobe<sup>®</sup> locations.

**Trainer Industries, LLC/Former Metro Container Corporation Site  
Trainer, Pennsylvania  
Site Characterization Photograph Log - 2005**

Photo Metro-Trainer.052: View to the northwest of the Test Trench-01 excavation at the Trainer Industries, LLC/former Metro Container Corporation site. This photograph shows the trench had been excavated to a depth just above the water table and that numerous drum lids were encountered at approximately 3 ft bgs.

**Trainer Industries, LLC/Former Metro Container Corporation Site  
Trainer, Pennsylvania  
Site Characterization Photograph Log - 2005**

Photo Metro-Trainer.053: View to the northwest of the Test Trench-01 excavation at the Trainer Industries, LLC/former Metro Container Corporation site. This photograph shows the trench being excavated through the top of the water table; additional drum lids were encountered at this depth in addition to numerous crushed 55-gallon drums.

**Trainer Industries, LLC/Former Metro Container Corporation Site  
Trainer, Pennsylvania  
Site Characterization Photograph Log - 2005**

Photo Metro-Trainer.054: View to the southwest of the sidewall of the Test Trench-01 excavation at the Trainer Industries, LLC/former Metro Container Corporation site. Underlying a 2-foot thick layer of soil cover, a distinct light gray layer of flyash was encountered. Underlying this flyash layer was a tightly compacted deposit of crushed and apparently incinerated drums at a depth of 3 to 5 feet bgs.

**Trainer Industries, LLC/Former Metro Container Corporation Site  
Trainer, Pennsylvania  
Site Characterization Photograph Log - 2005**

Photo Metro-Trainer.055: View of a crushed 55-gallon removed from the Test Trench-01 excavation at the Trainer Industries, LLC/former Metro Container Corporation site. Many of the crushed drums that were encountered contained small amounts of residual solids that registered PID readings up to 427 ppm. Plastic sheeting was also encountered intertwined with the drums.

**Trainer Industries, LLC/Former Metro Container Corporation Site  
Trainer, Pennsylvania  
Site Characterization Photograph Log - 2005**

Photo Metro-Trainer.056: View to the northwest of the Test Trench-01 excavation at the Trainer Industries, LLC/former Metro Container Corporation site. This trench was being advanced to the northwest towards the 05-MET-129 Geoprobe<sup>®</sup> location from the 05-MET-01 Geoprobe<sup>®</sup> location. Hydrocarbon sheens were noted on the water table, due primarily to the severe soil impacts present beneath the water table in this vicinity.

**Trainer Industries, LLC/Former Metro Container Corporation Site  
Trainer, Pennsylvania  
Site Characterization Photograph Log - 2005**

Photo Metro-Trainer.057: View to the southeast of the debris removed from the Test Trench-01 excavation at the Trainer Industries, LLC/former Metro Container Corporation site. Although a large backhoe tire and numerous 5-gallon buckets of discarded paint were encountered in the excavation, the anthropogenic fill in this area was primarily comprised of crushed 55-gallon drums and drum lids. The drums appeared to have been incinerated as the metal was charred and blackened and there were no labels or other identifying markings on the drums.

**Trainer Industries, LLC/Former Metro Container Corporation Site  
Trainer, Pennsylvania  
Site Characterization Photograph Log - 2005**

Photo Metro-Trainer.058: Another view to the northwest of the debris removed from the Test Trench-01 excavation at the Trainer Industries, LLC/former Metro Container Corporation site. The volume of flyash (right foreground) was substantial; it is surmised that this flyash was either obtained from Delaware County Regional Water Quality Control Authority (Delcora) in the mid-1980s, in violation of a PADER order not to use such material as fill, or from the facility's own incinerator that was used to burn the exterior paint from drums and also prepare unsalvageable drums for the scrap metal market.

**Trainer Industries, LLC/Former Metro Container Corporation Site  
Trainer, Pennsylvania  
Site Characterization Photograph Log - 2005**

Photo Metro-Trainer.059: View to the northeast of the commencement of the Test Trench-02 excavation at the Trainer Industries, LLC/former Metro Container Corporation site. This trench, which encountered construction debris and a concrete slab, was advanced between the 05-MET-86 and 05-MET-139 Geoprobe<sup>®</sup> locations. Historical aerial photographs indicate that this location was the site of a Stauffer Chemical Company, Inc. structure.

**Trainer Industries, LLC/Former Metro Container Corporation Site  
Trainer, Pennsylvania  
Site Characterization Photograph Log - 2005**

Photo Metro-Trainer.060: View to the northeast of a concrete slab encountered at 4 ft bgs in the Test Trench-02 excavation at the Trainer Industries, LLC/former Metro Container Corporation site. Most of the anthropogenic fill encountered in this trench was comprised of bricks, concrete block, terra-cotta pipe, and miscellaneous metallic debris.

**Trainer Industries, LLC/Former Metro Container Corporation Site  
Trainer, Pennsylvania  
Site Characterization Photograph Log - 2005**

Photo Metro-Trainer.061: View to the northeast of the Test Trench-02 excavation at the Trainer Industries, LLC/former Metro Container Corporation site as the trench is being advanced to the northeast towards the 05-MET-13 Geoprobe<sup>®</sup> location, the same area depicted on the right-hand side of Photo Metro-Trainer.89-03. The water table was encountered between 3 to 4 ft bgs in this excavation. One crushed drum was encountered; the small amount of residual solids in this drum registered a PID reading of 280 ppm.

**Trainer Industries, LLC/Former Metro Container Corporation Site  
Trainer, Pennsylvania  
Site Characterization Photograph Log - 2005**

Photo Metro-Trainer.062: Close-up view of the northeastern end of the Test Trench-02 excavation at the Trainer Industries, LLC/former Metro Container Corporation site. An unknown 4.5-inch diameter steel pipeline was encountered approximately 2.5 feet bgs; it is not known if this was one of the many former pipelines that were connected to the stormwater conveyance system during the drum reclaiming operations at the site or a remnant of some other former Stauffer Chemical Company, Inc. industrial processing infrastructure.

**Trainer Industries, LLC/Former Metro Container Corporation Site  
Trainer, Pennsylvania  
Site Characterization Photograph Log - 2005**

Photo Metro-Trainer.063: View to the southwest of the commencement of the Test Trench-03 excavation at the Trainer Industries, LLC/former Metro Container Corporation site, the same location depicted in the center of Photo Metro-Trainer.89-13. This trench was advanced in the vicinity of the 05-MET-109 and 05-MET-121 Geoprobe<sup>®</sup> locations just to the west of the former drum reclaiming building where the EM-61 geophysical survey indicated intense magnetic anomalies and a linear anomaly suggestive of a buried pipeline. Several plastic pipes were encountered in the shallow subsurface leading away from the former drum reclaiming building, probably related to the primary wastewater treatment system that operated under the former Universal Container Corporation/Metro Container Corporation ownership.

### **ADVANCED GEOLOGICAL SERVICES EM AND GPR SURVEY REPORT (1999) AND QUANTUM GEOPHYSICS EM-61 SURVEY REPORT (2005)**

August 30, 2005

[REDACTED]  
MWH Americas, Inc.  
335 Phoenixville Pike  
Malvern, PA 19355

Re: Report  
EM61 Metal Detector Survey  
Metro Container Site  
Trainer, Pennsylvania

[REDACTED],  
  
This report presents the findings of Quantum Geophysics, Inc.'s EM61 metal detector survey to identify potential buried drums at the Metro Container site in Trainer, Pennsylvania.

The survey was carried-out August 22 through 24 by Quantum's principal geophysicist Richard Lee and technicians Justin Dietrich and Matt Dietrich. To guide the survey, a 20' x 20' grid was constructed over the area of investigation using a transit, 300-foot fiberglass survey tapes, fluorescent paint, and pin-flags. The grid was tied (referenced) to staked sample locations common to a basemap provided by MWH Americas, Inc. (Metro-03.dwg).

The EM61 was run along lines spaced 5 feet apart and data were automatically acquired every 0.86 feet of traverse for 100% coverage, where accessible. In the office, the data were entered into the surface applications program Surfer for Windows, gridded using the Kriging Method with an octant search, contoured at 20 millivolts (mV), inserted as a raster image onto the basemap Metro-03.dwg, annotated, and then printed by a Hewlett Packard (HP) 1220c color deskjet at a scale of 1" = 20 feet.

## **FINDINGS**

The fully annotated EM61 contour map is shown in Figure 1. Based upon the geophysical data:

[REDACTED]  
MWH Americas, Inc.

Page 2

- Several buried metal debris fields were identified. They are characterized by areas of relatively high EM61 responses (approximately 225 to over 300 mV). They vary in size from as small as approximately 40' x 100' to as large as 150' x over 300' long. The buried debris fields are largely concentrated in the western portion of the site, especially along the silt fence that runs parallel to and near Stony Creek. Although it is difficult to discriminate the type or origin of metal targets based upon EM61 data, there is a good probability that if drums are located onsite they would be located in these buried debris fields.
- Several linear anomalies suggestive of buried metal pipes were also identified. The origin of the pipes is unknown but the larger linear anomalies, like the one in the eastern portion of the site that trends through areas of staged materials, may be caused by corrugated metal pipes (CMP).

Quantum appreciates this opportunity to be of service to MWH Americas, Inc. Please call if you have any questions or if we can be of further assistance.

Sincerely,

**Quantum Geophysics, Inc.**

**Subject:** Results of geophysical investigation conducted at the Former Metro Container Facility, Price Street, Trainer, Pennsylvania

Dear Ms. [REDACTED]

Advanced Geological Services (AGS) presents this letter report to Pennoni Associates Inc. of Philadelphia, Pennsylvania detailing the methods and results of a geophysical investigation conducted at the former Metro Container facility located at Price and 2<sup>nd</sup> Streets in Trainer, Pennsylvania. The portion of the site included in this geophysical investigation was located along the western and southern sides of the former drum recycling plant building and encompassed approximately 2 acres. All geophysical field activities were completed on May 25, 1999.

The objectives of the investigation were to 1) determine if any potential underground storage tanks (USTs) are present, and 2) identify any locations of potential drum burial. To meet the objectives of the investigation, AGS used an integrated geophysical survey approach consisting of the electromagnetic (EM) and the ground-penetrating radar (GPR) geophysical methods.

## **Survey Methods**

### ***Site Conditions***

Portions of the investigation area contained significant amounts of disregard surface metal and debris, particularly along the western side of the drum recycling plant and the area surrounding the former office and locker room buildings. In addition, large metal sliding doors were present along several outer walls of the drum recycling building, and portions of the building were constructed of metal beams and diamond-plate sheet steel.

Dense vegetation, consisting primarily of phragmites and cat-tails, was present in a portion of the site located to the west of the drum recycling plant and south of the former locker-room building. Standing water (up to 6 inches deep) was also present within the densely vegetated area and at the southern end of the geophysical survey grid.

### *Survey Grid*

Prior to data collection, a geophysical survey grid was established across the site. A baseline was extended southward from the northeastern metal gate post at the site entrance closest to the former office building. The baseline was parallel and coincident with the western wall of the shipping and receiving area of the plant building. The datum point established at the gate post was designated as coordinate 0 south/200 west (0S/200W). Wooden stakes were placed at 50 foot intervals along the baseline (line 200W) for future reference. EM data collection traverses were oriented perpendicular to the baseline and spaced 10 feet apart.

### *Electromagnetic (EM) Method*

The electromagnetic (EM) method uses the principle of electromagnetic induction to measure the variability of electrical conductivity of subsurface materials. Significant contrasts in the electrical properties between non-indigenous materials and surrounding soil enable accurate delineation of fill and buried materials. The large EM response to metal makes this technique particularly well suited to identifying buried metal objects, although it is equally sensitive to metal objects on the ground surface.

A GSSI GEM-300 multi-frequency EM instrument was used to conduct the EM investigation. The GEM-300 operates in accordance with the theory of operation at low induction numbers. An alternating current is passed through the transmitter coil to induce eddy currents into the ground. These eddy currents generate a secondary magnetic field. A component of the induced magnetic field is detected by a receiver coil and measured by the instrument. The receiver measures the field strength of both the quadrature and the in-phase components in the units of part per million (ppm) of the transmitted signal. The quadrature response is used by the GEM-300 instrument to internally calculate the soil conductivity response in units of milliSeimen per meter (mS/m).

For this investigation, EM data were collected at transmitter frequencies of 2.55 kilohertz (KHz) and 7.17 KHz to provide a maximum effective depth of investigation of approximately 19 feet. Conductivity EM measurements were collected at 5 foot intervals along each survey grid line spaced 10 feet apart. EM data measurements were made at more than 1,260 points throughout the survey area during this investigation.

### *Ground-Penetrating Radar (GPR) Method*

The ground-penetrating radar (GPR) method was used to provide subsurface imaging information at several locations where large amounts of surface metal precluded the use of EM methods, and at anomalous areas identified from the EM results. The GPR method is based upon the transmission of repetitive, radio-frequency electromagnetic (EM) pulses into the subsurface. When the transmitted energy of the down-going wave contacts an interface of dissimilar electrical

character, part of the energy is returned to the surface in the form of a reflected signal. This reflected signal is detected by a receiving transducer and is displayed on the screen of the GPR unit as well as being recorded on the internal hard-drive. The received GPR response remains constant as long as the electrical contrast between media is present and constant. Lateral or vertical changes in the electrical properties of the subsurface results in equivalent changes in the GPR response. The system records a continuous image of the subsurface by plotting two-way travel time of the reflected EM pulse versus distance traveled along the ground surface. Two-way travel time values are then converted to depth using known soil velocity functions.

The GPR field procedure involved (1) instrument calibration, (2) test run completion, (3) production profile collection and recording, and (4) data storage for subsequent processing and analysis in the office. Each radar profile was examined for characteristic GPR signatures that indicate the presence of signatures from buried objects, such as USTs.

A Geophysical Survey Systems SIR System 2 and a 400 megahertz (MHz) antenna were used with a recording window of 60 nanoseconds (ns) to provide the required depth penetration and subsurface detail. A total of 33 GPR profiles were recorded during this investigation.

## Results and Discussion

Contoured EM conductivity data and contoured in-phase EM data are shown on Figure 1 and Figure 2 respectively along with site features. The EM noise levels at the site are generally high as a result of the extensive amount of surface metal and the variability of surface soil type. The average background EM conductivity level at the site measured at a transmitter frequency of 2.55 KHz was approximately 500 mS/m, which is generally considered high. It is probable that the high background conductivity levels are caused by the high clay content of near surface soils, such as the clays and silts commonly found in fluvial and estuarine overbank deposits. The results of the EM survey are discussed in the bulleted items below.

- Generally the EM anomalies that can be attributed to a metal source are caused by scrap metal present on the ground surface. The results of the conductivity and in-phase EM data indicate that it is unlikely that any large cache of buried drums is present within the limits of the geophysical survey area, although the presence of buried metal at locations where extensive surface metal is present cannot be dismissed.
- The high conductivity values (greater than about 650 mS/m) located to the south of line 300S, which is shown in yellow and purple on Figure 1, are interpreted to be caused by surface soils. In this area, white gravel was observed to be covering the ground surface. Based on information from other facilities in the Trainer and Marcus Hook area, the white gravel may be an electrically conductive slag material that is often used for ballast. Despite the very high EM conductivity

observed to the south of line 300S, the in-phase EM data indicates that it is unlikely that a cache buried drums, is present. Soil sampling of this area could be conducted to verify this interpretation.

- An anomalous linear feature is noted in both the conductivity and the in-phase data which extends from 320S/300W to approximately 320S/200W (Figure 1). Based on the EM data, it is not possible to determine the exact source of this linear anomaly, however it could be the result of roadway ballast or a potential buried pipe. Further investigation would be required to determine the source of this anomaly.
- The EM data indicates the presence of a potential storm sewer pipe and potential fire protection line, as shown on Figure 1. The presence and exact location of these suspected pipes could not be verified with the GPR data.
- No EM anomalies features indicating the presence of any USTs around the perimeter of the former drum recycling building were identified on the EM contour plots. In addition, no UST fill ports or vent pipes were visually observed during data collection. However, electromagnetic interference from metal within the building structure and reinforced concrete, as well as discarded surface metal and metal truck trailers are present around portions of the building perimeter which could potentially mask any abandoned USTs that may be in these areas.

Ground-penetrating radar data were collected at several locations to determine if USTs were present and to provide additional subsurface information. The results from the GPR data are summarized in the bulleted items below:

- A number of GPR profiles were collected at the southern end of the former locker room building, to determine if a UST was present. The area investigated with GPR extended from the southern wall of the locker room building to approximately 20 feet south of the locker room. No GPR signatures that could be attributed to the presence of a UST were identified.
- The area extending from the entrance gate towards the drum recycling plant adjacent to the site fence (0S/200W to 5S/100W) was investigated for USTs. No GPR signatures that could be attributed to the presence of a UST were identified.
- GPR data were collected in the area surrounding the storm water catch basin near the pad (Figure 1) to identify the location of the storm sewer pipes and the fire protection line. A GPR record which crosses the potential fire protection line and potential storm sewer pipe, as identified in the EM results, is shown on Figure 3. The radar profile indicates that the water table depth during the time of the geophysical investigation was 4 feet below the ground surface. Below the water table, the GPR data was severely attenuated, therefore, the presence of buried pipes could not be verified.

## Summary

A geophysical survey was conducted across a site of approximately 2 acres to determine if drums had been buried on-site and determine the presence of USTs. The EM data indicate that the electrical conductivity of the soils at this site is high and the surface soil type may be variable across the site.

Generally, the identified EM anomalies could be attributed to surface metal sources and no areas within the geophysical survey area were interpreted to be the result of buried drums.

The portion of the site located immediately south of the former locker room and adjacent to the chain link fence at the north end of the site were investigated using the GPR method to determine if any USTs were present. No anomalies that could be attributed to a UST were identified.

The GPR results indicate that the water table at the site was 4 feet below the ground surface during the time of the geophysical investigation. Because of GPR signal attenuation from the water table, the location of the potential fire protection line and storm sewer could not be verified.

If you have any questions regarding the methods or results of this investigation, please contact me at 610-722-5500. It was a pleasure working with you on this project, and I look forward to working with you in the future.

Sincerely,

, P.G.  
Geophysicist

Accurate surrogate recoveries could not be determined due to the dilution required for analysis of the sample.

Due to the nature of the sample extract matrix, a dilution was used for the analysis. The reporting limits were raised accordingly.

03790	Dibenz(a,h)anthracene	53-70-3	3.5 J	0.74	3.7	mg/kg	5
03791	Benzo(g,h,i)perylene	191-24-2	3.4 J	0.74	3.7	mg/kg	5

Due to the sample matrix an initial dilution was necessary to perform the analysis. Therefore, the reporting limits for the GC/MS semivolatile compounds were raised.

Due to sample matrix interferences observed during the extraction, the normal reporting limits could not be obtained.

\*=This limit was used in the evaluation of the final result

CAT No.	Analysis Name	CAS Number	Dry Result	Dry Method Detection Limit*	Dry Limit of Quantitation	Units	Dilution Factor
06301	Xylene (Total)	1330-20-7	N.D.	1.5	7.3	mg/kg	996.02
07585	2-Chloroethyl Vinyl Ether	110-75-8	N.D.	2.9	15.	mg/kg	996.02
07586	Acrolein	107-02-8	N.D.	29.	150.	mg/kg	996.02
07587	Acrylonitrile	107-13-1	N.D.	5.9	29.	mg/kg	996.02

The analysis for volatiles was performed on a sample which was preserved in methanol. The reporting limits were adjusted appropriately. The reporting limits were further raised due to sample foaming.

Surrogate recoveries were outside of QC limits for the GC/MS volatile fraction due to the dilution needed to perform the analysis.

The percent recoveries for bromodichloromethane were outside QC limits high in the LCS/LCSD associated with this sample. Since the recoveries were high and this compound was not detected in the sample, no further action was taken.

00890 VOA GC/MS Library Search

The results from the volatile library search are listed on the attached FORM 1 - VOA-TIC. The qualifiers appearing in the "Q" column are defined on the back of this form.

00893 Semivolatile Library Search

The results from the semivolatile library search are listed on the attached FORM 1 - SV-TIC. The qualifiers appearing in the "Q" column are defined on the back of this form. An "X" indicates an isomer of the listed compound.

Commonwealth of Pennsylvania Lab Certification No. 36-037

The GC/MS volatile analysis was performed according to the high level soil method due to the level of target compounds. Therefore, the reporting limits were raised.

The percent recoveries for bromochloromethane were outside QC limits high in the LCS/LCSD associated with this sample. Since the recoveries were high and this

00893 Semivolatile Library Search

The results from the semivolatile library search are listed on the attached FORM 1 - SV-TIC. The qualifiers appearing in the "Q" column are defined on the back of this form. An "X" indicates an isomer of the listed compound.

Commonwealth of Pennsylvania Lab Certification No. 36-037

Accurate surrogate recoveries could not be determined due to the dilution required for analysis of the sample.

Due to the nature of the sample extract matrix, a dilution was used for the analysis. The reporting limits were raised accordingly.

Due to sample matrix interferences observed during the extraction, the normal reporting limits could not be obtained.

Due to the sample matrix an initial dilution was necessary to perform the analysis. Therefore, the reporting limits for the GC/MS semivolatile compounds were raised.

\*=This limit was used in the evaluation of the final result

in this sample due to the acid preservation of the samples and standards.

The GC/MS volatile internal standard peak areas were outside the QC limits. Because only one sample vial was prepared for this analysis, the analysis could not be repeated.

00890 VOA GC/MS Library Search

The results from the volatile library search are listed on the attached FORM 1 - VOA-TIC. The qualifiers appearing in the "Q" column are defined on the back of this form.

00893 Semivolatile Library Search

The results from the semivolatile library search are listed on the attached FORM 1 - SV-TIC. The qualifiers appearing in the "Q" column are defined on the back of this form. An "X" indicates an isomer of the listed compound.

Commonwealth of Pennsylvania Lab Certification No. 36-037

Accurate surrogate recoveries could not be determined due to the dilution required for analysis of the sample.

Due to the nature of the sample matrix, a reduced aliquot was used for analysis. The reporting limits were raised accordingly.

03790	Dibenz(a,h)anthracene	53-70-3	N.D.	1.6	7.8	mg/kg	1
03791	Benzo(g,h,i)perylene	191-24-2	3.2 J	1.6	7.8	mg/kg	1

Due to sample matrix interferences observed during the extraction, the normal reporting limits could not be obtained.

The surrogate data is outside the QC limits due to unresolvable matrix problems evident in the sample chromatogram.

\*=This limit was used in the evaluation of the final result

soil method due to the level of target compounds. Therefore, the reporting limits were raised.

The percent recoveries for bromochloromethane were outside QC limits high in the LCS/LCSD associated with this sample. Since the recoveries were high and this compound was not detected in the sample, no further action was taken.

Surrogate recoveries were outside of QC limits for the GC/MS volatile fraction due to the dilution needed to perform the analysis.

## 00890 VOA GC/MS Library Search

The results from the volatile library search are listed on the attached FORM 1 - VOA-TIC. The qualifiers appearing in the "Q" column are defined on the back of this form.

## 00893 Semivolatile Library Search

The results from the semivolatile library search are listed on the attached FORM 1 - SV-TIC. The qualifiers appearing in the "Q" column are defined on the back of this form. An "X" indicates an isomer of the listed compound.

Commonwealth of Pennsylvania Lab Certification No. 36-037

because sample dilution was necessary to bring target compounds into the calibration range of the system.

00890 VOA GC/MS Library Search

The results from the volatile library search are listed on the attached FORM 1 - VOA-TIC. The qualifiers appearing in the "Q" column are defined on the back of this form.

00893 Semivolatile Library Search

The results from the semivolatile library search are listed on the attached FORM 1 - SV-TIC. The qualifiers appearing in the "Q" column are defined on the back of this form. An "X" indicates an isomer of the listed compound.

Commonwealth of Pennsylvania Lab Certification No. 36-037

AR100552

## Quality Control Summary

Client Name: Montgomery Watson Harza  
Reported: 08/22/05 at 02:53 PM

Group Number: 954514

Matrix QC may not be reported if site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD was performed, unless otherwise specified in the method.

AR100571

# Explanation of Symbols and Abbreviations

The following defines common symbols and abbreviations used in reporting technical data:

<b>N.D.</b>	none detected	<b>BMQL</b>	Below Minimum Quantitation Level
<b>TNTC</b>	Too Numerous To Count	<b>MPN</b>	Most Probable Number
<b>IU</b>	International Units	<b>CP Units</b>	cobalt-chloroplatinate units
<b>umhos/cm</b>	micromhos/cm	<b>NTU</b>	nephelometric turbidity units
<b>C</b>	degrees Celsius	<b>F</b>	degrees Fahrenheit
<b>meq</b>	milliequivalents	<b>lb.</b>	pound(s)
<b>g</b>	gram(s)	<b>kg</b>	kilogram(s)
<b>ug</b>	microgram(s)	<b>mg</b>	milligram(s)
<b>ml</b>	milliliter(s)	<b>l</b>	liter(s)
<b>m3</b>	cubic meter(s)	<b>ul</b>	microliter(s)
<b>&lt;</b>	less than - The number following the sign is the <u>limit of quantitation</u> , the smallest amount of analyte which can be reliably determined using this specific test.		
<b>&gt;</b>	greater than		
<b>J</b>	estimated value – The result is $\geq$ the Method Detection Limit (MDL) and $<$ the Limit of Quantitation (LOQ).		
<b>ppm</b>	parts per million - One ppm is equivalent to one milligram per kilogram (mg/kg), or one gram per million grams. For aqueous liquids, ppm is usually taken to be equivalent to milligrams per liter (mg/l), because one liter of water has a weight very close to a kilogram. For gases or vapors, one ppm is equivalent to one microliter of gas per liter of gas.		
<b>ppb</b>	parts per billion		
<b>Dry weight basis</b>	Results printed under this heading have been adjusted for moisture content. This increases the analyte weight concentration to approximate the value present in a similar sample without moisture. All other results are reported on an as-received basis.		

## U.S. EPA CLP Data Qualifiers:

Organic Qualifiers		Inorganic Qualifiers	
<b>A</b>	TIC is a possible aldol-condensation product	<b>B</b>	Value is $<$ CRDL, but $\geq$ IDL
<b>B</b>	Analyte was also detected in the blank	<b>E</b>	Estimated due to interference
<b>C</b>	Pesticide result confirmed by GC/MS	<b>M</b>	Duplicate injection precision not met
<b>D</b>	Compound quantitated on a diluted sample	<b>N</b>	Spike sample not within control limits
<b>E</b>	Concentration exceeds the calibration range of the instrument	<b>S</b>	Method of standard additions (MSA) used for calculation
<b>N</b>	Presumptive evidence of a compound (TICs only)	<b>U</b>	Compound was not detected
<b>P</b>	Concentration difference between primary and confirmation columns $>25\%$	<b>W</b>	Post digestion spike out of control limits
<b>U</b>	Compound was not detected	<b>*</b>	Duplicate analysis not within control limits
<b>X,Y,Z</b>	Defined in case narrative	<b>+</b>	Correlation coefficient for MSA $<0.995$

Analytical test results for methods listed on the laboratories' accreditation scope meet all requirements of NELAC unless otherwise noted under the individual analysis.

Measurement uncertainty values, as applicable, are available upon request.

Tests results relate only to the sample tested. Clients should be aware that a critical step in a chemical or microbiological analysis is the collection of the sample. Unless the sample analyzed is truly representative of the bulk of material involved, the test results will be meaningless. If you have questions regarding the proper techniques of collecting samples, please contact us. We cannot be held responsible for sample integrity, however, unless sampling has been performed by a member of our staff. This report shall not be reproduced except in full, without the written approval of the laboratory.

**WARRANTY AND LIMITS OF LIABILITY** - In accepting analytical work, we warrant the accuracy of test results for the sample as submitted. THE FOREGOING EXPRESS WARRANTY IS EXCLUSIVE AND IS GIVEN IN LIEU OF ALL OTHER WARRANTIES, EXPRESSED OR IMPLIED. WE DISCLAIM ANY OTHER WARRANTIES, EXPRESSED OR IMPLIED, INCLUDING A WARRANTY OF FITNESS FOR PARTICULAR PURPOSE AND WARRANTY OF MERCHANTABILITY. IN NO EVENT SHALL LANCASTER LABORATORIES BE LIABLE FOR INDIRECT, SPECIAL, CONSEQUENTIAL, OR INCIDENTAL DAMAGES INCLUDING, BUT NOT LIMITED TO, DAMAGES FOR LOSS OF PROFIT OR GOODWILL REGARDLESS OF (A) THE NEGLIGENCE (EITHER SOLE OR CONCURRENT) OF LANCASTER LABORATORIES AND (B) WHETHER LANCASTER LABORATORIES HAS BEEN INFORMED OF THE POSSIBILITY OF SUCH DAMAGES. We accept no legal responsibility for the purposes for which the client uses the test results. No purchase order or other order for work shall be accepted by Lancaster Laboratories which includes any conditions that vary from the Standard Terms and Conditions of Lancaster Laboratories and we hereby object to any conflicting terms contained in any acceptance or order submitted by client.

Accurate surrogate recoveries could not be determined due to the dilution required for analysis of the sample.

Due to interfering peaks on the chromatogram, the values reported represent the lowest reporting limits obtainable for 4,4'-DDE.

Despite cleanup methods, we were unable to reach our usual reporting limits.

CAT No.	Analysis Name	CAS Number	Dry Result	Dry Method Detection Limit*	Dry Limit of Quantitation	Units	Dilution Factor
07587	Acrylonitrile	107-13-1	N.D.	33.	160.	mg/kg	4504.5

The GC/MS volatile analysis was performed according to the high level soil method due to the nature of the sample matrix. Therefore, the reporting limits were raised. The reporting limits were further raised due to sample foaming.

Surrogate recoveries were outside of QC limits for the GC/MS volatile fraction due to the dilution needed to perform the analysis.

00890 VOA GC/MS Library Search

The results from the volatile library search are listed on the attached FORM 1 - VOA-TIC. The qualifiers appearing in the "Q" column are defined on the back of this form.

00893 Semivolatile Library Search

The results from the semivolatile library search are listed on the attached FORM 1 - SV-TIC. The qualifiers appearing in the "Q" column are defined on the back of this form. An "X" indicates an isomer of the listed compound.

Accurate surrogate recoveries could not be determined due to the dilution required for analysis of the sample.

Due to the nature of the sample extract matrix, a dilution was used for the analysis. The reporting limits were raised accordingly.

Accurate surrogate recoveries could not be determined due to the dilution required for analysis of the sample.

Due to the nature of the sample extract matrix, a dilution was used for the analysis. The reporting limits were raised accordingly.

Due to the nature of the sample matrix, a reduced aliquot was used for analysis. The reporting limits were raised accordingly.

Due to the sample matrix an initial dilution was necessary to perform the analysis. Therefore, the reporting limits for the GC/MS semivolatile compounds were raised.

\*=This limit was used in the evaluation of the final result

CAT No.	Analysis Name	CAS Number	Dry Result	Dry Method Detection Limit*	Dry Limit of Quantitation	Units	Dilution Factor
---------	---------------	------------	------------	-----------------------------	---------------------------	-------	-----------------

The GC/MS volatile analysis was performed according to the high level soil method due to the level of non-target compounds. Therefore, the reporting limits were raised. The reporting limits were further raised due to sample foaming.

Surrogate recoveries were outside of QC limits for the GC/MS volatile fraction due to the dilution needed to perform the analysis.

00890 VOA GC/MS Library Search

The results from the volatile library search are listed on the attached FORM 1 - VOA-TIC. The qualifiers appearing in the "Q" column are defined on the back of this form.

00893 Semivolatile Library Search

The results from the semivolatile library search are listed on the attached FORM 1 - SV-TIC. The qualifiers appearing in the "Q" column are defined on the back of this form. An "X" indicates an isomer of the listed compound.

Commonwealth of Pennsylvania Lab Certification No. 36-037

Accurate surrogate recoveries could not be determined due to the dilution required for analysis of the sample.

Due to the nature of the sample extract matrix, a dilution was used for the analysis. The reporting limits were raised accordingly.

Due to the nature of the sample matrix, a reduced aliquot was used for analysis. The reporting limits were raised accordingly.

Due to the sample matrix an initial dilution was necessary to perform the analysis. Therefore, the reporting limits for the GC/MS semivolatile compounds were raised.

\*=This limit was used in the evaluation of the final result

CAT No.	Analysis Name	CAS Number	Dry Result	Dry Method Detection Limit*	Dry Limit of Quantitation	Units	Dilution Factor
---------	---------------	------------	------------	-----------------------------	---------------------------	-------	-----------------

The GC/MS volatile analysis was performed according to the high level soil method due to the nature of the sample matrix. Therefore, the reporting limits were raised. The reporting limits were further raised due to sample foaming.

Surrogate recoveries were outside of QC limits for the GC/MS volatile fraction due to the dilution needed to perform the analysis.

## 00890 VOA GC/MS Library Search

The results from the volatile library search are listed on the attached FORM 1 - VOA-TIC. The qualifiers appearing in the "Q" column are defined on the back of this form.

## 00893 Semivolatile Library Search

The results from the semivolatile library search are listed on the attached FORM 1 - SV-TIC. The qualifiers appearing in the "Q" column are defined on the back of this form. An "X" indicates an isomer of the listed compound.

Commonwealth of Pennsylvania Lab Certification No. 36-037

01999	PCB-1260	11096-82-5	N.D.	15.1	45.3	mg/kg	1000

Accurate surrogate recoveries could not be determined due to the dilution required for analysis of the sample.

Due to the nature of the sample extract matrix, a dilution was used for the analysis. The reporting limits were raised accordingly.

CAT No.	Analysis Name	CAS Number	Dry Result	Dry Method Detection Limit*	Dry Limit of Quantitation	Units	Dilution Factor
07585	2-Chloroethyl Vinyl Ether	110-75-8	N.D.	1.3	6.7	mg/kg	490.2
07586	Acrolein	107-02-8	N.D.	13.	67.	mg/kg	490.2
07587	Acrylonitrile	107-13-1	N.D.	2.7	13.	mg/kg	490.2

The GC/MS volatile analysis was performed according to the high level soil method due to the level of target compounds. Therefore, the reporting limits were raised. The reporting limits were further raised due to sample foaming.

Surrogate recoveries were outside of QC limits for the GC/MS volatile fraction due to the dilution needed to perform the analysis.

## 00890 VOA GC/MS Library Search

The results from the volatile library search are listed on the attached FORM 1 - VOA-TIC. The qualifiers appearing in the "Q" column are defined on the back of this form.

## 00893 Semivolatile Library Search

The results from the semivolatile library search are listed on the attached FORM 1 - SV-TIC. The qualifiers appearing in the "Q" column are defined on the back of this form. An "X" indicates an isomer of the listed compound.

Commonwealth of Pennsylvania Lab Certification No. 36-037

Accurate surrogate recoveries could not be determined due to the dilution required for analysis of the sample.

Due to the nature of the sample extract matrix, a dilution was used for the analysis. The reporting limits were raised accordingly.

Surrogate recoveries were outside of QC limits for the GC/MS volatile fraction due to the dilution needed to perform the analysis.

00890 VOA GC/MS Library Search

The results from the volatile library search are listed on the attached FORM 1 - VOA-TIC. The qualifiers appearing in the "Q" column are defined on the back of this form.

00893 Semivolatile Library Search

The results from the semivolatile library search are listed on the attached FORM 1 - SV-TIC. The qualifiers appearing in the "Q" column are defined on the back of this form. An "X" indicates an isomer of the listed compound.

Due to the nature of the sample extract matrix, a dilution was used for the analysis. The reporting limits were raised accordingly.

Accurate surrogate recoveries could not be determined due to the dilution required for analysis of the sample.

CAT No.	Analysis Name	CAS Number	Dry Result	Dry Method Detection Limit*	Dry Limit of Quantitation	Units	Dilution Factor
07585	2-Chloroethyl Vinyl Ether	110-75-8	N.D.	2.5	12.	mg/kg	992.06
07586	Acrolein	107-02-8	N.D.	25.	120.	mg/kg	992.06
07587	Acrylonitrile	107-13-1	N.D.	5.0	25.	mg/kg	992.06

The GC/MS volatile analysis was performed according to the high level soil method due to the level of non-target compounds. Therefore, the reporting limits were raised. The reporting limits were further raised due to sample foaming.

Surrogate recoveries were outside of QC limits for the GC/MS volatile fraction due to the dilution needed to perform the analysis.

## 00890 VOA GC/MS Library Search

The results from the volatile library search are listed on the attached FORM 1 - VOA-TIC. The qualifiers appearing in the "Q" column are defined on the back of this form.

## 00893 Semivolatile Library Search

The results from the semivolatile library search are listed on the attached FORM 1 - SV-TIC. The qualifiers appearing in the "Q" column are defined on the back of this form. An "X" indicates an isomer of the listed compound.

Commonwealth of Pennsylvania Lab Certification No. 36-037

Accurate surrogate recoveries could not be determined due to the dilution required for analysis of the sample.

Due to the nature of the sample extract matrix, a dilution was used for the analysis. The reporting limits were raised accordingly.

07587	Acrylonitrile	107-13-1	N.D.	2.2	11.	mg/kg	361.79

The GC/MS volatile analysis was performed according to the high level soil method due to the level of non-target compounds. Therefore, the reporting limits were raised. The reporting limits were further raised due to sample foaming.

\*=This limit was used in the evaluation of the final result

Surrogate recoveries were outside of QC limits for the GC/MS volatile fraction due to the dilution needed to perform the analysis.

00890 VOA GC/MS Library Search

The results from the volatile library search are listed on the attached FORM 1 - VOA-TIC. The qualifiers appearing in the "Q" column are defined on the back of this form.

00893 Semivolatile Library Search

The results from the semivolatile library search are listed on the attached FORM 1 - SV-TIC. The qualifiers appearing in the "Q" column are defined on the back of this form. An "X" indicates an isomer of the listed compound.

Commonwealth of Pennsylvania Lab Certification No. 36-037

01999	PCB-1260	11096-82-5	N.D.	3.04	9.13	mg/kg	200

Accurate surrogate recoveries could not be determined due to the dilution required for analysis of the sample.

Due to the nature of the sample extract matrix, a dilution was used for the analysis. The reporting limits were raised accordingly.

Accurate surrogate recoveries could not be determined due to the dilution required for analysis of the sample.

Due to the nature of the sample extract matrix, a dilution was used for the analysis. The reporting limits were raised accordingly.

Surrogate recoveries were outside of QC limits for the GC/MS volatile fraction due to the dilution needed to perform the analysis.

00890 VOA GC/MS Library Search

The results from the volatile library search are listed on the attached FORM 1 - VOA-TIC. The qualifiers appearing in the "Q" column are defined on the back of this form.

00893 Semivolatile Library Search

The results from the semivolatile library search are listed on the attached FORM 1 - SV-TIC. The qualifiers appearing in the "Q" column are defined on the back of this form. An "X" indicates an isomer of the listed compound.

Commonwealth of Pennsylvania Lab Certification No. 36-037

01998	PCB-1254	11097-69-1	N.D.	4.62	23.8	mg/kg	1000
01999	PCB-1260	11096-82-5	N.D.	15.4	46.2	mg/kg	1000

Accurate surrogate recoveries could not be determined due to the dilution required for analysis of the sample.

Due to the nature of the sample extract matrix, a dilution was used for the analysis. The reporting limits were raised accordingly.

The GC/MS volatile analysis was performed according to the high level soil method due to the level of non-target compounds. Therefore, the reporting limits were raised. The reporting limits were further raised due to sample foaming.

\*=This limit was used in the evaluation of the final result

Surrogate recoveries were outside of QC limits for the GC/MS volatile fraction due to the dilution needed to perform the analysis.

00890 VOA GC/MS Library Search

The results from the volatile library search are listed on the attached FORM 1 - VOA-TIC. The qualifiers appearing in the "Q" column are defined on the back of this form.

00893 Semivolatile Library Search

The results from the semivolatile library search are listed on the attached FORM 1 - SV-TIC. The qualifiers appearing in the "Q" column are defined on the back of this form. An "X" indicates an isomer of the listed compound.

2-Chloroethyl vinyl ether is an acid labile compound and may not be recovered in an acid preserved sample.							

## 00890 VOA GC/MS Library Search

The results from the volatile library search are listed on the attached FORM 1 - VOA-TIC. The qualifiers appearing in the "Q" column are defined on the back of this form.

## 00893 Semivolatile Library Search

The results from the semivolatile library search are listed on the attached FORM 1 - SV-TIC. The qualifiers appearing in the "Q" column are defined on the back of this form. An "X" indicates an isomer of the listed compound.

2-Chloroethyl vinyl ether is an acid labile compound and may not be recovered in an acid preserved sample.							

## 00890 VOA GC/MS Library Search

The results from the volatile library search are listed on the attached FORM 1 - VOA-TIC. The qualifiers appearing in the "Q" column are defined on the back of this form.

## 00893 Semivolatile Library Search

The results from the semivolatile library search are listed on the attached FORM 1 - SV-TIC. The qualifiers appearing in the "Q" column are defined on the back of this form. An "X" indicates an isomer of the listed compound.

## Quality Control Summary

Client Name: Montgomery Watson Harza  
Reported: 09/28/05 at 02:12 PM

Group Number: 954923

Matrix QC may not be reported if site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD was performed, unless otherwise specified in the method.

# Explanation of Symbols and Abbreviations

The following defines common symbols and abbreviations used in reporting technical data:

<b>N.D.</b>	none detected	<b>BMQL</b>	Below Minimum Quantitation Level
<b>TNTC</b>	Too Numerous To Count	<b>MPN</b>	Most Probable Number
<b>IU</b>	International Units	<b>CP Units</b>	cobalt-chloroplatinate units
<b>umhos/cm</b>	micromhos/cm	<b>NTU</b>	nephelometric turbidity units
<b>C</b>	degrees Celsius	<b>F</b>	degrees Fahrenheit
<b>meq</b>	milliequivalents	<b>lb.</b>	pound(s)
<b>g</b>	gram(s)	<b>kg</b>	kilogram(s)
<b>ug</b>	microgram(s)	<b>mg</b>	milligram(s)
<b>ml</b>	milliliter(s)	<b>l</b>	liter(s)
<b>m3</b>	cubic meter(s)	<b>ul</b>	microliter(s)
<b>&lt;</b>	less than - The number following the sign is the <u>limit of quantitation</u> , the smallest amount of analyte which can be reliably determined using this specific test.		
<b>&gt;</b>	greater than		
<b>J</b>	estimated value – The result is $\geq$ the Method Detection Limit (MDL) and $<$ the Limit of Quantitation (LOQ).		
<b>ppm</b>	parts per million - One ppm is equivalent to one milligram per kilogram (mg/kg), or one gram per million grams. For aqueous liquids, ppm is usually taken to be equivalent to milligrams per liter (mg/l), because one liter of water has a weight very close to a kilogram. For gases or vapors, one ppm is equivalent to one microliter of gas per liter of gas.		
<b>ppb</b>	parts per billion		
<b>Dry weight basis</b>	Results printed under this heading have been adjusted for moisture content. This increases the analyte weight concentration to approximate the value present in a similar sample without moisture. All other results are reported on an as-received basis.		

## U.S. EPA CLP Data Qualifiers:

Organic Qualifiers		Inorganic Qualifiers	
<b>A</b>	TIC is a possible aldol-condensation product	<b>B</b>	Value is $<$ CRDL, but $\geq$ IDL
<b>B</b>	Analyte was also detected in the blank	<b>E</b>	Estimated due to interference
<b>C</b>	Pesticide result confirmed by GC/MS	<b>M</b>	Duplicate injection precision not met
<b>D</b>	Compound quantitated on a diluted sample	<b>N</b>	Spike sample not within control limits
<b>E</b>	Concentration exceeds the calibration range of the instrument	<b>S</b>	Method of standard additions (MSA) used for calculation
<b>N</b>	Presumptive evidence of a compound (TICs only)	<b>U</b>	Compound was not detected
<b>P</b>	Concentration difference between primary and confirmation columns $>25\%$	<b>W</b>	Post digestion spike out of control limits
<b>U</b>	Compound was not detected	<b>*</b>	Duplicate analysis not within control limits
<b>X,Y,Z</b>	Defined in case narrative	<b>+</b>	Correlation coefficient for MSA $<0.995$

Analytical test results for methods listed on the laboratories' accreditation scope meet all requirements of NELAC unless otherwise noted under the individual analysis.

Measurement uncertainty values, as applicable, are available upon request.

Tests results relate only to the sample tested. Clients should be aware that a critical step in a chemical or microbiological analysis is the collection of the sample. Unless the sample analyzed is truly representative of the bulk of material involved, the test results will be meaningless. If you have questions regarding the proper techniques of collecting samples, please contact us. We cannot be held responsible for sample integrity, however, unless sampling has been performed by a member of our staff. This report shall not be reproduced except in full, without the written approval of the laboratory.

**WARRANTY AND LIMITS OF LIABILITY** - In accepting analytical work, we warrant the accuracy of test results for the sample as submitted. THE FOREGOING EXPRESS WARRANTY IS EXCLUSIVE AND IS GIVEN IN LIEU OF ALL OTHER WARRANTIES, EXPRESSED OR IMPLIED. WE DISCLAIM ANY OTHER WARRANTIES, EXPRESSED OR IMPLIED, INCLUDING A WARRANTY OF FITNESS FOR PARTICULAR PURPOSE AND WARRANTY OF MERCHANTABILITY. IN NO EVENT SHALL LANCASTER LABORATORIES BE LIABLE FOR INDIRECT, SPECIAL, CONSEQUENTIAL, OR INCIDENTAL DAMAGES INCLUDING, BUT NOT LIMITED TO, DAMAGES FOR LOSS OF PROFIT OR GOODWILL REGARDLESS OF (A) THE NEGLIGENCE (EITHER SOLE OR CONCURRENT) OF LANCASTER LABORATORIES AND (B) WHETHER LANCASTER LABORATORIES HAS BEEN INFORMED OF THE POSSIBILITY OF SUCH DAMAGES. We accept no legal responsibility for the purposes for which the client uses the test results. No purchase order or other order for work shall be accepted by Lancaster Laboratories which includes any conditions that vary from the Standard Terms and Conditions of Lancaster Laboratories and we hereby object to any conflicting terms contained in any acceptance or order submitted by client.

The results from the volatile library search are listed on the attached FORM 1 - VOA-TIC. The qualifiers appearing in the "Q" column are defined on the back of this form.

00893 Semivolatile Library Search

The results from the semivolatile library search are listed on the attached FORM 1 - SV-TIC. The qualifiers appearing in the "Q" column are defined on the back of this form. An "X" indicates an isomer of the listed compound.

Commonwealth of Pennsylvania Lab Certification No. 36-037

After receipt the pH of the metals container for this sample was adjusted to &lt;2.

01624	PCB-1254	11097-69-1	52.	7.0	25.	ug/l	5
01626	PCB-1260	11096-82-5	37.	5.0	25.	ug/l	5
01860	Methoxychlor	72-43-5	N.D.	1.5	5.0	ug/l	5
Due to interfering peaks on the chromatogram, the values reported represent the lowest reporting limits obtainable for 4,4'-DDE and dieldrin. Despite cleanup methods, we were unable to reach our usual quantitation limits. Due to the nature of the sample matrix, a reduced aliquot was used for analysis. The reporting limits were raised accordingly.							
07879	EDB						
01087	Ethylene dibromide	106-93-4	N.D.	0.010	0.030	ug/l	1
The surrogate data is outside the QC limits due to unresolvable matrix problems evident in the sample chromatogram.

01860	Methoxychlor	72-43-5	N.D.	15.	50.	ug/l	50
Due to interfering peaks on the chromatogram, the values reported represent the lowest reporting limits obtainable for 4,4'-DDE, and dieldrin. Despite cleanup methods, we were unable to reach our usual quantitation limits. Due to the nature of the sample matrix, a reduced aliquot was used for analysis. The reporting limits were raised accordingly.							
07879	EDB						
01087	Ethylene dibromide	106-93-4	N.D.	0.049	0.15	ug/l	5
Due to the nature of the sample extract matrix, a dilution was used for the analysis. The reporting limits were raised accordingly.

The sample for the GC/MS volatile analysis was received with headspace.

The reporting limits for the GC/MS volatile compounds were raised due to insufficient sample volume. The sample vials contained large quantities of soil sediment.

00890 VOA GC/MS Library Search

The results from the volatile library search are listed on the attached FORM 1 - VOA-TIC. The qualifiers appearing in the "Q" column are defined on the back of this form.

00893 Semivolatile Library Search

The results from the semivolatile library search are listed on the attached FORM 1 - SV-TIC. The qualifiers appearing in the "Q" column are defined on the back of this form. An "X" indicates an isomer of the listed compound.

Commonwealth of Pennsylvania Lab Certification No. 36-037

After receipt the pH of the metals container for this sample was adjusted to &lt;2.

01860	Methoxychlor	72-43-5	N.D.	15.	50.	ug/l	50

Due to interfering peaks on the chromatogram, the values reported represent the lowest reporting limits obtainable heptachlor epoxide, 4,4'-DDE, dieldrin, and endrin aldehyde.

Despite cleanup methods, we were unable to reach our usual reporting limits.

Due to the nature of the sample matrix, a reduced aliquot was used for analysis. The reporting limits were raised accordingly.

Accurate surrogate recoveries could not be determined due to the dilution required for analysis of the sample.

07879 EDB

01087	Ethylene dibromide	106-93-4	N.D.	1.9	5.6	ug/l	200
-------	--------------------	----------	------	-----	-----	------	-----

This sample was injected numerous times and each time the ending calibration standard fell outside the method criteria. This effect is attributed to matrix. The surrogate data is outside the QC limits due to unresolvable matrix problems evident in the sample chromatogram.

Due to the nature of the sample extract matrix, a dilution was used for the analysis. The reporting limits were raised accordingly.

2-Chloroethyl vinyl ether could not be reported for this sample, because the instrument was not calibrated for this compound.

#### 00890 VOA GC/MS Library Search

The results from the volatile library search are listed on the attached FORM 1 - VOA-TIC. The qualifiers appearing in the "Q" column are defined on the back of this form.

#### 00893 Semivolatile Library Search

The results from the semivolatile library search are listed on the attached FORM 1 - SV-TIC. The qualifiers appearing in the "Q" column are defined on the back of this form. An "X" indicates an isomer of the listed compound.

Commonwealth of Pennsylvania Lab Certification No. 36-037

After receipt the pH of the metals container for this sample was adjusted to <2.

Due to interfering peaks on the chromatogram, the values reported represent the lowest reporting limits obtainable for 4,4'-DDE, dieldrin, and endrin aldehyde.

Despite cleanup methods, we were unable to reach our usual reporting limits.

Due to the nature of the sample matrix, a reduced aliquot was used for analysis. The reporting limits were raised accordingly.

07879 EDB

01087	Ethylene dibromide	106-93-4	N.D.	0.19	0.56	ug/l	20
Accurate surrogate recoveries could not be determined due to the dilution required for analysis of the sample.							
Due to the nature of the sample extract matrix, a dilution was used for the analysis. The reporting limits were raised accordingly.

Due to insufficient sample, the reporting limits for the GC/MS semivolatile compounds were raised.

Due to sample matrix interferences observed during the extraction, the normal reporting limits could not be obtained.

2-Chloroethyl vinyl ether could not be reported for this sample, because the instrument was not calibrated for this compound.

## 00890 VOA GC/MS Library Search

The results from the volatile library search are listed on the attached FORM 1 - VOA-TIC. The qualifiers appearing in the "Q" column are defined on the back of this form.

## 00893 Semivolatile Library Search

The results from the semivolatile library search are listed on the attached FORM 1 - SV-TIC. The qualifiers appearing in the "Q" column are defined on the back of this form. An "X" indicates an isomer of the listed compound.

Commonwealth of Pennsylvania Lab Certification No. 36-037

After receipt the pH of the metals container for this sample was adjusted to &lt;2.

Due to the nature of the sample extract matrix, a dilution was used for the analysis. The reporting limits were raised accordingly.

Accurate surrogate recoveries could not be determined due to the dilution required for analysis of the sample.

Due to the nature of the sample matrix, a reduced aliquot was used for analysis. The reporting limits were raised accordingly.

CAT No.	Analysis Name	CAS Number	As Received Result	As Received Method Detection Limit*	As Received Limit of Quantitation	Units	Dilution Factor
03979	Dibenz(a,h)anthracene	53-70-3	1,200. J	500.	2,500.	ug/l	5
03980	Benzo(g,h,i)perylene	191-24-2	1,900. J	500.	2,500.	ug/l	5

Due to sample matrix interferences observed during the extraction, the normal reporting limits could not be obtained.

Due to the sample matrix an initial dilution was necessary to perform the analysis. Therefore, the reporting limits for the GC/MS semivolatile compounds were raised.

The reporting limits for the GC/MS volatile compounds were raised due to the level of non-target compounds.

2-Chloroethyl vinyl ether could not be reported for this sample, because the instrument was not calibrated for this compound.

## 00890 VOA GC/MS Library Search

The results from the volatile library search are listed on the attached FORM 1 - VOA-TIC. The qualifiers appearing in the "Q" column are defined on the back of this form.

## 00893 Semivolatile Library Search

The results from the semivolatile library search are listed on the attached FORM 1 - SV-TIC. The qualifiers appearing in the "Q" column are defined on the back of this form. An "X" indicates an isomer of the listed compound.

Commonwealth of Pennsylvania Lab Certification No. 36-037

After receipt the pH of the metals container for this sample was adjusted to &lt;2.

01860	Methoxychlor	72-43-5	N.D.	1.5	5.0	ug/l	5

Due to interfering peaks on the chromatogram, the values reported represent the lowest reporting limits obtainable for heptachlor epoxide and dieldrin. Despite cleanup methods, we were unable to reach our usual reporting limits.

Due to the nature of the sample matrix, a reduced aliquot was used for analysis. The reporting limits were raised accordingly.

07879 EDB

01087	Ethylene dibromide	106-93-4	N.D.	0.0096	0.029	ug/l	1
The surrogate data is outside the QC limits due to unresolvable matrix problems evident in the sample chromatogram.

The reporting limits for the GC/MS volatile compounds were raised due to sample foaming.

## 00890 VOA GC/MS Library Search

The results from the volatile library search are listed on the attached FORM 1 - VOA-TIC. The qualifiers appearing in the "Q" column are defined on the back of this form.

## 00893 Semivolatile Library Search

The results from the semivolatile library search are listed on the attached FORM 1 - SV-TIC. The qualifiers appearing in the "Q" column are defined on the back of this form. An "X" indicates an isomer of the listed compound.

Commonwealth of Pennsylvania Lab Certification No. 36-037

After receipt the pH of the metals container for this sample was adjusted to <2.

2-Chloroethyl vinyl ether could not be reported for this sample, because the instrument was not calibrated for this compound.

## 00890 VOA GC/MS Library Search

The results from the volatile library search are listed on the attached FORM 1 - VOA-TIC. The qualifiers appearing in the "Q" column are defined on the back of this form.

## 00893 Semivolatile Library Search

The results from the semivolatile library search are listed on the attached FORM 1 - SV-TIC. The qualifiers appearing in the "Q" column are defined on the back of this form. An "X" indicates an isomer of the listed compound.

Commonwealth of Pennsylvania Lab Certification No. 36-037

After receipt the pH of the metals container for this sample was adjusted to <2.

07072	Zinc	7440-66-6	55.4	5.3	20.0	ug/l	1

Commonwealth of Pennsylvania Lab Certification No. 36-037

This sample was field filtered for dissolved metals.

After receipt the pH of the metals container for this sample was adjusted to <2.

01860	Methoxychlor	72-43-5	N.D.	3.0	10.	ug/l	10

Accurate surrogate recoveries could not be determined due to the dilution required for analysis of the sample.

Due to interfering peaks on the chromatogram, the values reported represent the lowest reporting limits obtainable for 4,4'-DDE, and 4,4'-DDT.

Despite cleanup methods, we were unable to reach our usual reporting limits.

Due to the nature of the sample extract matrix, a dilution was used for the analysis. The reporting limits were raised accordingly.

Due to the nature of the sample matrix, a reduced aliquot was used for analysis. The reporting limits were raised accordingly.

CAT No.	Analysis Name	CAS Number	As Received Result	As Received Method Detection Limit*	As Received Limit of Quantitation	Units	Dilution Factor
03977	Benzo(a)pyrene	50-32-8	170. J	50.	250.	ug/l	5
03978	Indeno(1,2,3-cd)pyrene	193-39-5	58. J	50.	250.	ug/l	5
03979	Dibenz(a,h)anthracene	53-70-3	75. J	50.	250.	ug/l	5
03980	Benzo(g,h,i)perylene	191-24-2	110. J	50.	250.	ug/l	5

Due to sample matrix interferences observed during the extraction, the normal reporting limits could not be obtained.

Due to the sample matrix an initial dilution was necessary to perform the analysis. Therefore, the reporting limits for the GC/MS semivolatile compounds were raised.

2-Chloroethyl vinyl ether could not be reported for this sample, because the instrument was not calibrated for this compound.							

The reporting limits for the GC/MS volatile compounds were raised due to sample foaming.

## 00890 VOA GC/MS Library Search

The results from the volatile library search are listed on the attached FORM 1 - VOA-TIC. The qualifiers appearing in the "Q" column are defined on the back of this form.

## 00893 Semivolatile Library Search

The results from the semivolatile library search are listed on the attached FORM 1 - SV-TIC. The qualifiers appearing in the "Q" column are defined on the back of this form. An "X" indicates an isomer of the listed compound.

Commonwealth of Pennsylvania Lab Certification No. 36-037

After receipt the pH of the metals container for this sample was adjusted to &lt;2.

Due to the nature of the sample matrix, a reduced aliquot was used for analysis. The reporting limits were raised accordingly.

Due to interfering peaks on the chromatogram, the values reported represent the lowest reporting limits obtainable for 4,4'-DDE, dieldrin, and endrin aldehyde.

Despite cleanup methods, we were unable to reach our usual reporting limits.

	insufficient sample volume. The sample vials contained large quantities of soil sediment.						

00890 VOA GC/MS Library Search  
The results from the volatile library search are listed on the attached FORM 1 - VOA-TIC. The qualifiers appearing in the "Q" column are defined on the back of this form.

00893 Semivolatile Library Search  
The results from the semivolatile library search are listed on the attached FORM 1 - SV-TIC. The qualifiers appearing in the "Q" column are defined on the back of this form. An "X" indicates an isomer of the listed compound.

Commonwealth of Pennsylvania Lab Certification No. 36-037  
After receipt the pH of the metals container for this sample was adjusted to <2.

Ethylene dibromide is being reported as a GC/MS Volatile compound because the sample solidified during the ethylene dibromide extraction by SW-846 8011.

01860	Methoxychlor	72-43-5	N.D.	60.	200.	ug/l	200
Due to the nature of the sample matrix, a reduced aliquot was used for analysis. The reporting limits were raised accordingly.							
Due to interfering peaks on the chromatogram, the values reported represent the lowest reporting limits obtainable for 4,4'-DDE and dieldrin.							
Despite cleanup methods, we were unable to reach our usual reporting limits.

00890 VOA GC/MS Library Search

The results from the volatile library search are listed on the attached FORM 1 - VOA-TIC. The qualifiers appearing in the "Q" column are defined on the back of this form.

00893 Semivolatile Library Search

The results from the semivolatile library search are listed on the attached FORM 1 - SV-TIC. The qualifiers appearing in the "Q" column are defined on the back of this form. An "X" indicates an isomer of the listed compound.

Commonwealth of Pennsylvania Lab Certification No. 36-037

After receipt the pH of the metals container for this sample was adjusted to &lt;2.

Due to the nature of the sample matrix, a reduced aliquot was used for analysis. The reporting limits were raised accordingly.

Due to interfering peaks on the chromatogram, the values reported represent the lowest reporting limits obtainable for 4,4'-DDE and dieldrin.

Despite cleanup methods, we were unable to reach our usual reporting limits.

2-Chloroethyl vinyl ether could not be reported for this sample, because the instrument was not calibrated for this compound.

#### 00890 VOA GC/MS Library Search

The results from the volatile library search are listed on the attached FORM 1 - VOA-TIC. The qualifiers appearing in the "Q" column are defined on the back of this form.

#### 00893 Semivolatile Library Search

The results from the semivolatile library search are listed on the attached FORM 1 - SV-TIC. The qualifiers appearing in the "Q" column are defined on the back of this form. An "X" indicates an isomer of the listed compound.

Commonwealth of Pennsylvania Lab Certification No. 36-037

After receipt the pH of the metals container for this sample was adjusted to <2.

CAT No.	Analysis Name	CAS Number	As Received Result	As Received Method Detection Limit*	As Received Limit of Quantitation	Units	Dilution Factor
01620	PCB-1221	11104-28-2	N.D.	5.5	25.	ug/l	5
01621	PCB-1232	11141-16-5	N.D.	5.0	25.	ug/l	5
01622	PCB-1242	53469-21-9	N.D.	5.0	25.	ug/l	5
01623	PCB-1248	12672-29-6	N.D.	51.	51.	ug/l	5
01624	PCB-1254	11097-69-1	150.	7.0	25.	ug/l	5
01626	PCB-1260	11096-82-5	35.	5.0	25.	ug/l	5
01860	Methoxychlor	72-43-5	N.D.	1.5	5.0	ug/l	5

Due to the nature of the sample matrix, a reduced aliquot was used for analysis. The reporting limits were raised accordingly.

Due to interfering peaks on the chromatogram, the values reported represent the lowest reporting limits obtainable for 4,4'-DDE, dieldrin, and aroclor-1248. Despite cleanup methods, we were unable to reach our usual reporting limits.

07879 EDB

01087	Ethylene dibromide	106-93-4	0.096	0.0098	0.029	ug/l	1
The surrogate data is outside the QC limits due to unresolvable matrix problems evident in the sample chromatogram.

2-Chloroethyl vinyl ether could not be reported for this sample, because the instrument was not calibrated for this compound.

#### 00890 VOA GC/MS Library Search

The results from the volatile library search are listed on the attached FORM 1 - VOA-TIC. The qualifiers appearing in the "Q" column are defined on the back of this form.

#### 00893 Semivolatile Library Search

The results from the semivolatile library search are listed on the attached FORM 1 - SV-TIC. The qualifiers appearing in the "Q" column are defined on the back of this form. An "X" indicates an isomer of the listed compound.

## Quality Control Summary

Client Name: Montgomery Watson Harza  
Reported: 09/28/05 at 01:45 PM

Group Number: 954924

Matrix QC may not be reported if site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD was performed, unless otherwise specified in the method.

# Explanation of Symbols and Abbreviations

The following defines common symbols and abbreviations used in reporting technical data:

<b>N.D.</b>	none detected	<b>BMQL</b>	Below Minimum Quantitation Level
<b>TNTC</b>	Too Numerous To Count	<b>MPN</b>	Most Probable Number
<b>IU</b>	International Units	<b>CP Units</b>	cobalt-chloroplatinate units
<b>umhos/cm</b>	micromhos/cm	<b>NTU</b>	nephelometric turbidity units
<b>C</b>	degrees Celsius	<b>F</b>	degrees Fahrenheit
<b>meq</b>	milliequivalents	<b>lb.</b>	pound(s)
<b>g</b>	gram(s)	<b>kg</b>	kilogram(s)
<b>ug</b>	microgram(s)	<b>mg</b>	milligram(s)
<b>ml</b>	milliliter(s)	<b>l</b>	liter(s)
<b>m3</b>	cubic meter(s)	<b>ul</b>	microliter(s)
<b>&lt;</b>	less than - The number following the sign is the <u>limit of quantitation</u> , the smallest amount of analyte which can be reliably determined using this specific test.		
<b>&gt;</b>	greater than		
<b>J</b>	estimated value – The result is $\geq$ the Method Detection Limit (MDL) and $<$ the Limit of Quantitation (LOQ).		
<b>ppm</b>	parts per million - One ppm is equivalent to one milligram per kilogram (mg/kg), or one gram per million grams. For aqueous liquids, ppm is usually taken to be equivalent to milligrams per liter (mg/l), because one liter of water has a weight very close to a kilogram. For gases or vapors, one ppm is equivalent to one microliter of gas per liter of gas.		
<b>ppb</b>	parts per billion		
<b>Dry weight basis</b>	Results printed under this heading have been adjusted for moisture content. This increases the analyte weight concentration to approximate the value present in a similar sample without moisture. All other results are reported on an as-received basis.		

## U.S. EPA CLP Data Qualifiers:

Organic Qualifiers		Inorganic Qualifiers	
<b>A</b>	TIC is a possible aldol-condensation product	<b>B</b>	Value is $<$ CRDL, but $\geq$ IDL
<b>B</b>	Analyte was also detected in the blank	<b>E</b>	Estimated due to interference
<b>C</b>	Pesticide result confirmed by GC/MS	<b>M</b>	Duplicate injection precision not met
<b>D</b>	Compound quantitated on a diluted sample	<b>N</b>	Spike sample not within control limits
<b>E</b>	Concentration exceeds the calibration range of the instrument	<b>S</b>	Method of standard additions (MSA) used for calculation
<b>N</b>	Presumptive evidence of a compound (TICs only)	<b>U</b>	Compound was not detected
<b>P</b>	Concentration difference between primary and confirmation columns $>25\%$	<b>W</b>	Post digestion spike out of control limits
<b>U</b>	Compound was not detected	<b>*</b>	Duplicate analysis not within control limits
<b>X,Y,Z</b>	Defined in case narrative	<b>+</b>	Correlation coefficient for MSA $<0.995$

Analytical test results for methods listed on the laboratories' accreditation scope meet all requirements of NELAC unless otherwise noted under the individual analysis.

Measurement uncertainty values, as applicable, are available upon request.

Tests results relate only to the sample tested. Clients should be aware that a critical step in a chemical or microbiological analysis is the collection of the sample. Unless the sample analyzed is truly representative of the bulk of material involved, the test results will be meaningless. If you have questions regarding the proper techniques of collecting samples, please contact us. We cannot be held responsible for sample integrity, however, unless sampling has been performed by a member of our staff. This report shall not be reproduced except in full, without the written approval of the laboratory.

**WARRANTY AND LIMITS OF LIABILITY** - In accepting analytical work, we warrant the accuracy of test results for the sample as submitted. THE FOREGOING EXPRESS WARRANTY IS EXCLUSIVE AND IS GIVEN IN LIEU OF ALL OTHER WARRANTIES, EXPRESSED OR IMPLIED. WE DISCLAIM ANY OTHER WARRANTIES, EXPRESSED OR IMPLIED, INCLUDING A WARRANTY OF FITNESS FOR PARTICULAR PURPOSE AND WARRANTY OF MERCHANTABILITY. IN NO EVENT SHALL LANCASTER LABORATORIES BE LIABLE FOR INDIRECT, SPECIAL, CONSEQUENTIAL, OR INCIDENTAL DAMAGES INCLUDING, BUT NOT LIMITED TO, DAMAGES FOR LOSS OF PROFIT OR GOODWILL REGARDLESS OF (A) THE NEGLIGENCE (EITHER SOLE OR CONCURRENT) OF LANCASTER LABORATORIES AND (B) WHETHER LANCASTER LABORATORIES HAS BEEN INFORMED OF THE POSSIBILITY OF SUCH DAMAGES. We accept no legal responsibility for the purposes for which the client uses the test results. No purchase order or other order for work shall be accepted by Lancaster Laboratories which includes any conditions that vary from the Standard Terms and Conditions of Lancaster Laboratories and we hereby object to any conflicting terms contained in any acceptance or order submitted by client.

Accurate surrogate recoveries could not be determined due to the dilution required for analysis of the sample.

Due to the nature of the sample extract matrix, a dilution was used for the analysis. The reporting limits were raised accordingly.

The recovery of benzidine was above QC limits in the LCS. Since benzidine was not detected in the sample, no further action was taken.

Matrix QC was performed on this sample for the GCMS semivolatile analysis. Please see the attached QC summary report for compounds showing a matrix bias.

2-Chloroethyl vinyl ether is an acid labile compound and cannot be reported in this sample due to the acid preservation of the samples and standards.

A GC/MS volatile internal standard peak area was outside the QC limits. Because only one sample vial was prepared for the low level analysis, the analysis could not be repeated.

00890 VOA GC/MS Library Search

The results from the volatile library search are listed on the attached FORM 1 - VOA-TIC. The qualifiers appearing in the "Q" column are defined on the back of this form.

00893 Semivolatile Library Search

The results from the semivolatile library search are listed on the attached FORM 1 - SV-TIC. The qualifiers appearing in the "Q" column are defined on the back of this form. An "X" indicates an isomer of the listed compound.

Commonwealth of Pennsylvania Lab Certification No. 36-037

Accurate surrogate recoveries could not be determined due to the dilution required for analysis of the sample.

Due to the nature of the sample extract matrix, a dilution was used for the analysis. The reporting limits were raised accordingly.

The recovery of benzidine was above QC limits in the LCS. Since benzidine was not detected in the sample, no further action was taken.

Due to sample matrix interferences observed during the extraction, the normal reporting limits could not be obtained.

\*=This limit was used in the evaluation of the final result

CAT No.	Analysis Name	CAS Number	Dry Result	Dry Method Detection Limit*	Dry Limit of Quantitation	Units	Dilution Factor
07585	2-Chloroethyl Vinyl Ether	110-75-8	N.D.	1.3	6.7	mg/kg	519.75
07586	Acrolein	107-02-8	N.D.	13.	67.	mg/kg	519.75
07587	Acrylonitrile	107-13-1	N.D.	2.7	13.	mg/kg	519.75

The GC/MS volatile analysis was performed according to the high level soil method due to the level of non-target compounds. Therefore, the reporting limits were raised. The reporting limits were further raised due to sample foaming.

Surrogate recoveries were outside of QC limits for the GC/MS volatile fraction due to the dilution needed to perform the analysis.

#### 00890 VOA GC/MS Library Search

The results from the volatile library search are listed on the attached FORM 1 - VOA-TIC. The qualifiers appearing in the "Q" column are defined on the back of this form.

#### 00893 Semivolatile Library Search

The results from the semivolatile library search are listed on the attached FORM 1 - SV-TIC. The qualifiers appearing in the "Q" column are defined on the back of this form. An "X" indicates an isomer of the listed compound.

Commonwealth of Pennsylvania Lab Certification No. 36-037

The GC/MS volatile analysis was performed according to the high level soil method due to the level of non-target compounds. Therefore, the reporting limits were raised. The reporting limits were further raised due to sample foaming.

\* = This limit was used in the evaluation of the final result

Accurate surrogate recoveries could not be determined due to the dilution required for analysis of the sample.

Due to the nature of the sample extract matrix, a dilution was used for the analysis. The reporting limits were raised accordingly.

The recovery of benzidine was above QC limits in the LCS. Since benzidine was not detected in the sample, no further action was taken.

Due to sample matrix interferences observed during the extraction, the normal reporting limits could not be obtained.

\*=This limit was used in the evaluation of the final result

2-Chloroethyl vinyl ether is an acid labile compound and cannot be reported in this sample due to the acid preservation of the samples and standards.							

00890 VOA GC/MS Library Search

The results from the volatile library search are listed on the attached FORM 1 - VOA-TIC. The qualifiers appearing in the "Q" column are defined on the back of this form.

00893 Semivolatile Library Search

The results from the semivolatile library search are listed on the attached FORM 1 - SV-TIC. The qualifiers appearing in the "Q" column are defined on the back of this form. An "X" indicates an isomer of the listed compound.

Commonwealth of Pennsylvania Lab Certification No. 36-037

Due to interfering peaks on the chromatogram, the values reported represent the lowest reporting limits obtainable for 4,4'-DDE, dieldrin, 4,4'-DDD, and endrin aldehyde.

Despite cleanup methods, we were unable to reach our usual reporting limits.

Accurate surrogate recoveries could not be determined due to the dilution required for analysis of the sample.

CAT No.	Analysis Name	CAS Number	Dry Result	Dry Method Detection Limit*	Dry Limit of Quantitation	Units	Dilution Factor
Due to sample matrix interferences observed during the extraction, the normal reporting limits could not be obtained.							
Due to the sample matrix an initial dilution was necessary to perform the analysis. Therefore, the reporting limits for the GC/MS semivolatile compounds were raised.

The GC/MS volatile analysis was performed according to the high level soil method due to the level of target compounds. Therefore, the reporting limits were raised.

00890 VOA GC/MS Library Search

The results from the volatile library search are listed on the attached FORM 1 - VOA-TIC. The qualifiers appearing in the "Q" column are defined on the back of this form.

00893 Semivolatile Library Search

The results from the semivolatile library search are listed on the attached FORM 1 - SV-TIC. The qualifiers appearing in the "Q" column are defined on the back of this form. An "X" indicates an isomer of the listed compound.

Commonwealth of Pennsylvania Lab Certification No. 36-037

Due to interfering peaks on the chromatogram, the values reported represent the lowest reporting limits obtainable for 4,4'-DDE and 4,4'-DDD .

Despite cleanup methods, we were unable to reach our usual reporting limits.

01997	PCB-1248	12672-29-6	N.D.	18.6	55.8	mg/kg	1000
01998	PCB-1254	11097-69-1	N.D.	5.58	28.8	mg/kg	1000
01999	PCB-1260	11096-82-5	N.D.	18.6	55.8	mg/kg	1000

Accurate surrogate recoveries could not be determined due to the dilution required for analysis of the sample.

Due to the nature of the sample extract matrix, a dilution was used for the analysis. The reporting limits were raised accordingly.

The recovery of benzidine was above QC limits in the LCS. Since benzidine was not detected in the sample, no further action was taken.

Due to sample matrix interferences observed during the extraction, the normal reporting limits could not be obtained.

\*=This limit was used in the evaluation of the final result

2-Chloroethyl vinyl ether is an acid labile compound and cannot be reported in this sample due to the acid preservation of the samples and standards.

The GC/MS volatile internal standard peak areas were outside the QC limits. Also, a surrogate recovery was outside of QC limits. Because only one sample vial was prepared for the low level analysis, the analysis could not be repeated.

00890 VOA GC/MS Library Search

The results from the volatile library search are listed on the attached FORM 1 - VOA-TIC. The qualifiers appearing in the "Q" column are defined on the back of this form.

00893 Semivolatile Library Search

The results from the semivolatile library search are listed on the attached FORM 1 - SV-TIC. The qualifiers appearing in the "Q" column are defined on the back of this form. An "X" indicates an isomer of the listed compound.

Commonwealth of Pennsylvania Lab Certification No. 36-037

Accurate surrogate recoveries could not be determined due to the dilution required for analysis of the sample.

Due to the nature of the sample extract matrix, a dilution was used for the analysis. The reporting limits were raised accordingly.

Due to interfering peaks on the chromatogram, the values reported represent the lowest reporting limits obtainable for dieldrin, and endosulfan II.

Despite cleanup methods, we were unable to reach our usual reporting limits.

Due to sample matrix interferences observed during the extraction, the normal reporting limits could not be obtained.							
Due to the sample matrix an initial dilution was necessary to perform the analysis. Therefore, the reporting limits for the GC/MS semivolatile compounds were raised.

2-Chloroethyl vinyl ether is an acid labile compound and cannot be reported in this sample due to the acid preservation of the samples and standards.

A GC/MS volatile internal standard peak area was outside the QC limits. Because only one sample vial was prepared for the low level analysis, the analysis could not be repeated.

#### 00890 VOA GC/MS Library Search

The results from the volatile library search are listed on the attached FORM 1 - VOA-TIC. The qualifiers appearing in the "Q" column are defined on the back of this form.

#### 00893 Semivolatile Library Search

The results from the semivolatile library search are listed on the attached FORM 1 - SV-TIC. The qualifiers appearing in the "Q" column are defined on the back of this form. An "X" indicates an isomer of the listed compound.

Commonwealth of Pennsylvania Lab Certification No. 36-037

Accurate surrogate recoveries could not be determined due to the dilution required for analysis of the sample.

Due to the nature of the sample extract matrix, a dilution was used for the analysis. The reporting limits were raised accordingly.

Due to the nature of the sample matrix, a reduced aliquot was used for analysis. The reporting limits were raised accordingly.

Due to interfering peaks on the chromatogram, the values reported represent the lowest reporting limits obtainable for 4,4'-DDD.

Despite cleanup methods, we were unable to reach our usual reporting limits.

The recovery of benzidine was above QC limits in the LCS. Since benzidine was not detected in the sample, no further action was taken.							
Due to sample matrix interferences observed during the extraction, the normal reporting limits could not be obtained.

2-Chloroethyl vinyl ether is an acid labile compound and cannot be reported in this sample due to the acid preservation of the samples and standards.

A GC/MS volatile internal standard peak area was outside the QC limits. Because only one sample vial was prepared for the low level analysis, the analysis could not be repeated.

#### 00890 VOA GC/MS Library Search

The results from the volatile library search are listed on the attached FORM 1 - VOA-TIC. The qualifiers appearing in the "Q" column are defined on the back of this form.

#### 00893 Semivolatile Library Search

The results from the semivolatile library search are listed on the attached FORM 1 - SV-TIC. The qualifiers appearing in the "Q" column are defined on the back of this form. An "X" indicates an isomer of the listed compound.

Commonwealth of Pennsylvania Lab Certification No. 36-037

Accurate surrogate recoveries could not be determined due to the dilution required for analysis of the sample.

Due to the nature of the sample matrix, a reduced aliquot was used for analysis. The reporting limits were raised accordingly.

The recovery of benzidine was above QC limits in the LCS. Since benzidine was not detected in the sample, no further action was taken.

Due to sample matrix interferences observed during the extraction, the normal reporting limits could not be obtained.

\*=This limit was used in the evaluation of the final result

Accurate surrogate recoveries could not be determined due to the dilution required for analysis of the sample.

Due to the nature of the sample extract matrix, a dilution was used for the analysis. The reporting limits were raised accordingly.

The recovery of benzidine was above QC limits in the LCS. Since benzidine was not detected in the sample, no further action was taken.

Due to the sample matrix an initial dilution was necessary to perform the analysis. Therefore, the reporting limits for the GC/MS semivolatile compounds were raised.

\*=This limit was used in the evaluation of the final result

2-Chloroethyl vinyl ether is an acid labile compound and cannot be reported in this sample due to the acid preservation of the samples and standards.							

00890 VOA GC/MS Library Search

The results from the volatile library search are listed on the attached FORM 1 - VOA-TIC. The qualifiers appearing in the "Q" column are defined on the back of this form.

00893 Semivolatile Library Search

The results from the semivolatile library search are listed on the attached FORM 1 - SV-TIC. The qualifiers appearing in the "Q" column are defined on the back of this form. An "X" indicates an isomer of the listed compound.

Commonwealth of Pennsylvania Lab Certification No. 36-037

Accurate surrogate recoveries could not be determined due to the dilution required for analysis of the sample.

Due to interfering peaks on the chromatogram, the values reported represent the lowest reporting limits obtainable for beta-BHC, endosulfan I, endosulfan II, 4,4'-DDT, and endrin aldehyde.

Despite cleanup methods, we were unable to reach our usual reporting limits.

07587	Acrylonitrile	107-13-1	N.D.	0.36	1.8	mg/kg	68.78

The GC/MS volatile analysis was performed according to the high level soil method due to the level of target compounds. Therefore, the reporting limits were raised. The reporting limits were further raised due to sample foaming.

#### 00890 VOA GC/MS Library Search

The results from the volatile library search are listed on the attached FORM 1 - VOA-TIC. The qualifiers appearing in the "Q" column are defined on the back of this form.

#### 00893 Semivolatile Library Search

The results from the semivolatile library search are listed on the attached FORM 1 - SV-TIC. The qualifiers appearing in the "Q" column are defined on the back of this form. An "X" indicates an isomer of the listed compound.

Commonwealth of Pennsylvania Lab Certification No. 36-037

2-Chloroethyl vinyl ether is an acid labile compound and may not be recovered in an acid preserved sample.							

**00890 VOA GC/MS Library Search**

The results from the volatile library search are listed on the attached FORM 1 - VOA-TIC. The qualifiers appearing in the "Q" column are defined on the back of this form.

**00893 Semivolatile Library Search**

The results from the semivolatile library search are listed on the attached FORM 1 - SV-TIC. The qualifiers appearing in the "Q" column are defined on the back of this form. An "X" indicates an isomer of the listed compound.

2-Chloroethyl vinyl ether is an acid labile compound and may not be recovered in an acid preserved sample.							

**00890 VOA GC/MS Library Search**

The results from the volatile library search are listed on the attached FORM 1 - VOA-TIC. The qualifiers appearing in the "Q" column are defined on the back of this form.

**00893 Semivolatile Library Search**

The results from the semivolatile library search are listed on the attached FORM 1 - SV-TIC. The qualifiers appearing in the "Q" column are defined on the back of this form. An "X" indicates an isomer of the listed compound.

## Quality Control Summary

Client Name: Montgomery Watson Harza  
Reported: 09/01/05 at 08:59 AM

Group Number: 955099

Matrix QC may not be reported if site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD was performed, unless otherwise specified in the method.

# Explanation of Symbols and Abbreviations

The following defines common symbols and abbreviations used in reporting technical data:

<b>N.D.</b>	none detected	<b>BMQL</b>	Below Minimum Quantitation Level
<b>TNTC</b>	Too Numerous To Count	<b>MPN</b>	Most Probable Number
<b>IU</b>	International Units	<b>CP Units</b>	cobalt-chloroplatinate units
<b>umhos/cm</b>	micromhos/cm	<b>NTU</b>	nephelometric turbidity units
<b>C</b>	degrees Celsius	<b>F</b>	degrees Fahrenheit
<b>meq</b>	milliequivalents	<b>lb.</b>	pound(s)
<b>g</b>	gram(s)	<b>kg</b>	kilogram(s)
<b>ug</b>	microgram(s)	<b>mg</b>	milligram(s)
<b>ml</b>	milliliter(s)	<b>l</b>	liter(s)
<b>m3</b>	cubic meter(s)	<b>ul</b>	microliter(s)
<b>&lt;</b>	less than - The number following the sign is the <u>limit of quantitation</u> , the smallest amount of analyte which can be reliably determined using this specific test.		
<b>&gt;</b>	greater than		
<b>J</b>	estimated value – The result is $\geq$ the Method Detection Limit (MDL) and $<$ the Limit of Quantitation (LOQ).		
<b>ppm</b>	parts per million - One ppm is equivalent to one milligram per kilogram (mg/kg), or one gram per million grams. For aqueous liquids, ppm is usually taken to be equivalent to milligrams per liter (mg/l), because one liter of water has a weight very close to a kilogram. For gases or vapors, one ppm is equivalent to one microliter of gas per liter of gas.		
<b>ppb</b>	parts per billion		
<b>Dry weight basis</b>	Results printed under this heading have been adjusted for moisture content. This increases the analyte weight concentration to approximate the value present in a similar sample without moisture. All other results are reported on an as-received basis.		

## U.S. EPA CLP Data Qualifiers:

Organic Qualifiers		Inorganic Qualifiers	
<b>A</b>	TIC is a possible aldol-condensation product	<b>B</b>	Value is $<$ CRDL, but $\geq$ IDL
<b>B</b>	Analyte was also detected in the blank	<b>E</b>	Estimated due to interference
<b>C</b>	Pesticide result confirmed by GC/MS	<b>M</b>	Duplicate injection precision not met
<b>D</b>	Compound quantitated on a diluted sample	<b>N</b>	Spike sample not within control limits
<b>E</b>	Concentration exceeds the calibration range of the instrument	<b>S</b>	Method of standard additions (MSA) used for calculation
<b>N</b>	Presumptive evidence of a compound (TICs only)	<b>U</b>	Compound was not detected
<b>P</b>	Concentration difference between primary and confirmation columns $>25\%$	<b>W</b>	Post digestion spike out of control limits
<b>U</b>	Compound was not detected	<b>*</b>	Duplicate analysis not within control limits
<b>X,Y,Z</b>	Defined in case narrative	<b>+</b>	Correlation coefficient for MSA $<0.995$

Analytical test results for methods listed on the laboratories' accreditation scope meet all requirements of NELAC unless otherwise noted under the individual analysis.

Measurement uncertainty values, as applicable, are available upon request.

Tests results relate only to the sample tested. Clients should be aware that a critical step in a chemical or microbiological analysis is the collection of the sample. Unless the sample analyzed is truly representative of the bulk of material involved, the test results will be meaningless. If you have questions regarding the proper techniques of collecting samples, please contact us. We cannot be held responsible for sample integrity, however, unless sampling has been performed by a member of our staff. This report shall not be reproduced except in full, without the written approval of the laboratory.

**WARRANTY AND LIMITS OF LIABILITY** - In accepting analytical work, we warrant the accuracy of test results for the sample as submitted. THE FOREGOING EXPRESS WARRANTY IS EXCLUSIVE AND IS GIVEN IN LIEU OF ALL OTHER WARRANTIES, EXPRESSED OR IMPLIED. WE DISCLAIM ANY OTHER WARRANTIES, EXPRESSED OR IMPLIED, INCLUDING A WARRANTY OF FITNESS FOR PARTICULAR PURPOSE AND WARRANTY OF MERCHANTABILITY. IN NO EVENT SHALL LANCASTER LABORATORIES BE LIABLE FOR INDIRECT, SPECIAL, CONSEQUENTIAL, OR INCIDENTAL DAMAGES INCLUDING, BUT NOT LIMITED TO, DAMAGES FOR LOSS OF PROFIT OR GOODWILL REGARDLESS OF (A) THE NEGLIGENCE (EITHER SOLE OR CONCURRENT) OF LANCASTER LABORATORIES AND (B) WHETHER LANCASTER LABORATORIES HAS BEEN INFORMED OF THE POSSIBILITY OF SUCH DAMAGES. We accept no legal responsibility for the purposes for which the client uses the test results. No purchase order or other order for work shall be accepted by Lancaster Laboratories which includes any conditions that vary from the Standard Terms and Conditions of Lancaster Laboratories and we hereby object to any conflicting terms contained in any acceptance or order submitted by client.

The reporting limits for the GC/MS volatile compounds were raised due to sample foaming.

00890 VOA GC/MS Library Search

The results from the volatile library search are listed on the attached FORM 1 - VOA-TIC. The qualifiers appearing in the "Q" column are defined on the back of this form.

00893 Semivolatile Library Search

The results from the semivolatile library search are listed on the attached FORM 1 - SV-TIC. The qualifiers appearing in the "Q" column are defined on the back of this form. An "X" indicates an isomer of the listed compound.

07583	2-Chloroethyl Vinyl Ether	110-75-8	N.D.	20.	100.	ug/l	10
2-Chloroethyl vinyl ether is an acid labile compound and may not be recovered in an acid preserved sample. The reporting limits for the GC/MS volatile compounds were raised due to sample foaming.							

00890 VOA GC/MS Library Search

The results from the volatile library search are listed on the attached FORM 1 - VOA-TIC. The qualifiers appearing in the "Q" column are defined on the back of this form.

00893 Semivolatile Library Search

The results from the semivolatile library search are listed on the attached FORM 1 - SV-TIC. The qualifiers appearing in the "Q" column are defined on the back of this form. An "X" indicates an isomer of the listed compound.

Commonwealth of Pennsylvania Lab Certification No. 36-037

After receipt the pH of the metals container for this sample was adjusted to <2.

CAT No.	Analysis Name	CAS Number	As Received Result	As Received Method Detection Limit*	As Received Limit of Quantitation	Units	Dilution Factor
01618	Endrin Aldehyde	7421-93-4	N.D.	2.3	10.	ug/l	10
01619	PCB-1016	12674-11-2	N.D.	10.	50.	ug/l	10
01620	PCB-1221	11104-28-2	N.D.	11.	50.	ug/l	10
01621	PCB-1232	11141-16-5	N.D.	10.	50.	ug/l	10
01622	PCB-1242	53469-21-9	N.D.	10.	50.	ug/l	10
01623	PCB-1248	12672-29-6	N.D.	50.	50.	ug/l	10
01624	PCB-1254	11097-69-1	N.D.	50.	50.	ug/l	10
01626	PCB-1260	11096-82-5	N.D.	50.	50.	ug/l	10
01860	Methoxychlor	72-43-5	N.D.	3.0	10.	ug/l	10

Accurate surrogate recoveries could not be determined due to the dilution required for analysis of the sample.

Due to the nature of the sample extract matrix, a dilution was used for the analysis. The reporting limits were raised accordingly.

07879 EDB

01087	Ethylene dibromide	106-93-4	N.D.	0.0098	0.029	ug/l	1
The surrogate data is outside the QC limits due to unresolvable matrix problems evident in the sample extraction.

2-Chloroethyl vinyl ether is an acid labile compound and may not be recovered in an acid preserved sample.

00890 VOA GC/MS Library Search

The results from the volatile library search are listed on the attached FORM 1 - VOA-TIC. The qualifiers appearing in the "Q" column are defined on the back of this form.

00893 Semivolatile Library Search

The results from the semivolatile library search are listed on the attached FORM 1 - SV-TIC. The qualifiers appearing in the "Q" column are defined on the back of this form. An "X" indicates an isomer of the listed compound.

Commonwealth of Pennsylvania Lab Certification No. 36-037

01860	Methoxychlor	72-43-5	N.D.	3.0	10.	ug/l	10
Accurate surrogate recoveries could not be determined due to the dilution required for analysis of the sample.							
Due to the nature of the sample extract matrix, a dilution was used for the analysis. The reporting limits were raised accordingly.							
Due to interfering peaks on the chromatogram, the values reported represent the lowest reporting limits obtainable for aroclor-1248, aroclor-1254, and aroclor-1260.							
Despite cleanup methods, we were unable to reach our usual reporting limits.

	This sample was injected numerous times and each time the ending calibration standard fell outside the method criteria. This effect is attributed to matrix. The surrogate data is outside the QC limits due to unresolvable matrix problems evident in the sample chromatogram.

Due to sample matrix interferences observed during the extraction, the normal reporting limits could not be obtained.

Due to the sample matrix an initial dilution was necessary to perform the analysis. Therefore, the reporting limits for the GC/MS semivolatile

\*=This limit was used in the evaluation of the final result

2-Chloroethyl vinyl ether is an acid labile compound and may not be recovered in an acid preserved sample.

00890 VOA GC/MS Library Search

The results from the volatile library search are listed on the attached FORM 1 - VOA-TIC. The qualifiers appearing in the "Q" column are defined on the back of this form.

00893 Semivolatile Library Search

The results from the semivolatile library search are listed on the attached FORM 1 - SV-TIC. The qualifiers appearing in the "Q" column are defined on the back of this form. An "X" indicates an isomer of the listed compound.

This sample was injected numerous times and each time the ending calibration standard fell outside the method criteria. This effect is attributed to matrix. The surrogate data is outside the QC limits due to unresolvable matrix problems evident in the sample chromatogram.

## Quality Control Summary

Client Name: Montgomery Watson Harza  
Reported: 08/22/05 at 01:02 PM

Group Number: 955100

Matrix QC may not be reported if site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD was performed, unless otherwise specified in the method.

# Explanation of Symbols and Abbreviations

The following defines common symbols and abbreviations used in reporting technical data:

<b>N.D.</b>	none detected	<b>BMQL</b>	Below Minimum Quantitation Level
<b>TNTC</b>	Too Numerous To Count	<b>MPN</b>	Most Probable Number
<b>IU</b>	International Units	<b>CP Units</b>	cobalt-chloroplatinate units
<b>umhos/cm</b>	micromhos/cm	<b>NTU</b>	nephelometric turbidity units
<b>C</b>	degrees Celsius	<b>F</b>	degrees Fahrenheit
<b>meq</b>	milliequivalents	<b>lb.</b>	pound(s)
<b>g</b>	gram(s)	<b>kg</b>	kilogram(s)
<b>ug</b>	microgram(s)	<b>mg</b>	milligram(s)
<b>ml</b>	milliliter(s)	<b>l</b>	liter(s)
<b>m3</b>	cubic meter(s)	<b>ul</b>	microliter(s)
<b>&lt;</b>	less than - The number following the sign is the <u>limit of quantitation</u> , the smallest amount of analyte which can be reliably determined using this specific test.		
<b>&gt;</b>	greater than		
<b>J</b>	estimated value – The result is $\geq$ the Method Detection Limit (MDL) and $<$ the Limit of Quantitation (LOQ).		
<b>ppm</b>	parts per million - One ppm is equivalent to one milligram per kilogram (mg/kg), or one gram per million grams. For aqueous liquids, ppm is usually taken to be equivalent to milligrams per liter (mg/l), because one liter of water has a weight very close to a kilogram. For gases or vapors, one ppm is equivalent to one microliter of gas per liter of gas.		
<b>ppb</b>	parts per billion		
<b>Dry weight basis</b>	Results printed under this heading have been adjusted for moisture content. This increases the analyte weight concentration to approximate the value present in a similar sample without moisture. All other results are reported on an as-received basis.		

## U.S. EPA CLP Data Qualifiers:

Organic Qualifiers		Inorganic Qualifiers	
<b>A</b>	TIC is a possible aldol-condensation product	<b>B</b>	Value is $<$ CRDL, but $\geq$ IDL
<b>B</b>	Analyte was also detected in the blank	<b>E</b>	Estimated due to interference
<b>C</b>	Pesticide result confirmed by GC/MS	<b>M</b>	Duplicate injection precision not met
<b>D</b>	Compound quantitated on a diluted sample	<b>N</b>	Spike sample not within control limits
<b>E</b>	Concentration exceeds the calibration range of the instrument	<b>S</b>	Method of standard additions (MSA) used for calculation
<b>N</b>	Presumptive evidence of a compound (TICs only)	<b>U</b>	Compound was not detected
<b>P</b>	Concentration difference between primary and confirmation columns $>25\%$	<b>W</b>	Post digestion spike out of control limits
<b>U</b>	Compound was not detected	<b>*</b>	Duplicate analysis not within control limits
<b>X,Y,Z</b>	Defined in case narrative	<b>+</b>	Correlation coefficient for MSA $<0.995$

Analytical test results for methods listed on the laboratories' accreditation scope meet all requirements of NELAC unless otherwise noted under the individual analysis.

Measurement uncertainty values, as applicable, are available upon request.

Tests results relate only to the sample tested. Clients should be aware that a critical step in a chemical or microbiological analysis is the collection of the sample. Unless the sample analyzed is truly representative of the bulk of material involved, the test results will be meaningless. If you have questions regarding the proper techniques of collecting samples, please contact us. We cannot be held responsible for sample integrity, however, unless sampling has been performed by a member of our staff. This report shall not be reproduced except in full, without the written approval of the laboratory.

**WARRANTY AND LIMITS OF LIABILITY** - In accepting analytical work, we warrant the accuracy of test results for the sample as submitted. THE FOREGOING EXPRESS WARRANTY IS EXCLUSIVE AND IS GIVEN IN LIEU OF ALL OTHER WARRANTIES, EXPRESSED OR IMPLIED. WE DISCLAIM ANY OTHER WARRANTIES, EXPRESSED OR IMPLIED, INCLUDING A WARRANTY OF FITNESS FOR PARTICULAR PURPOSE AND WARRANTY OF MERCHANTABILITY. IN NO EVENT SHALL LANCASTER LABORATORIES BE LIABLE FOR INDIRECT, SPECIAL, CONSEQUENTIAL, OR INCIDENTAL DAMAGES INCLUDING, BUT NOT LIMITED TO, DAMAGES FOR LOSS OF PROFIT OR GOODWILL REGARDLESS OF (A) THE NEGLIGENCE (EITHER SOLE OR CONCURRENT) OF LANCASTER LABORATORIES AND (B) WHETHER LANCASTER LABORATORIES HAS BEEN INFORMED OF THE POSSIBILITY OF SUCH DAMAGES. We accept no legal responsibility for the purposes for which the client uses the test results. No purchase order or other order for work shall be accepted by Lancaster Laboratories which includes any conditions that vary from the Standard Terms and Conditions of Lancaster Laboratories and we hereby object to any conflicting terms contained in any acceptance or order submitted by client.

Due to interfering peaks on the chromatogram, the values reported represent the lowest reporting limits obtainable for dieldrin and endrin aldehyde.

Despite cleanup methods, we were unable to reach our usual reporting limits.

Due to the nature of the sample extract matrix, a dilution was used for the analysis. The reporting limits were raised accordingly.

03791	Benzo(g,h,i)perylene	191-24-2	36.	1.1	5.7	mg/kg	5

Due to sample matrix interferences observed during the extraction, the normal reporting limits could not be obtained.

Due to the sample matrix an initial dilution was necessary to perform the analysis. Therefore, the reporting limits for the GC/MS semivolatile compounds were raised.

The GC/MS volatile internal standard peak areas were outside the QC limits. Also, a surrogate recovery was outside of QC limits. Because only one sample vial was prepared for the low level analysis, the analysis could not be repeated.

00890 VOA GC/MS Library Search

The results from the volatile library search are listed on the attached FORM 1 - VOA-TIC. The qualifiers appearing in the "Q" column are defined on the back of this form.

00893 Semivolatile Library Search

The results from the semivolatile library search are listed on the attached FORM 1 - SV-TIC. The qualifiers appearing in the "Q" column are defined on the back of this form. An "X" indicates an isomer of the listed compound.

Accurate surrogate recoveries could not be determined due to the dilution required for analysis of the sample.

Due to interfering peaks on the chromatogram, the values reported represent the lowest reporting limits obtainable for 4,4'-DDE and chlordane.

Despite cleanup methods, we were unable to reach our usual reporting limits.

limits were raised.

Surrogate recoveries were outside of QC limits for the GC/MS volatile fraction. The analysis was repeated and out of specification surrogate recoveries were again observed indicating a matrix effect.

00890 VOA GC/MS Library Search

The results from the volatile library search are listed on the attached FORM 1 - VOA-TIC. The qualifiers appearing in the "Q" column are defined on the back of this form.

00893 Semivolatile Library Search

The results from the semivolatile library search are listed on the attached FORM 1 - SV-TIC. The qualifiers appearing in the "Q" column are defined on the back of this form. An "X" indicates an isomer of the listed compound.

Due to interfering peaks on the chromatogram, the values reported represent the lowest reporting limits obtainable for heptachlor epoxide, 4,4'-DDE and endrin aldehyde.

Despite cleanup methods, we were unable to reach our usual reporting limits.

Accurate surrogate recoveries could not be determined due to the dilution required for analysis of the sample.

Due to the sample matrix an initial dilution was necessary to perform the analysis. Therefore, the reporting limits for the GC/MS semivolatile compounds were raised.

\*=This limit was used in the evaluation of the final result

for both the initial analysis and the re-analysis. The values reported here are from the initial analysis of the sample.

2-Chloroethyl vinyl ether is an acid labile compound and cannot be reported in this sample due to the acid preservation of the samples and standards.

00890 VOA GC/MS Library Search

The results from the volatile library search are listed on the attached FORM 1 - VOA-TIC. The qualifiers appearing in the "Q" column are defined on the back of this form.

00893 Semivolatile Library Search

The results from the semivolatile library search are listed on the attached FORM 1 - SV-TIC. The qualifiers appearing in the "Q" column are defined on the back of this form. An "X" indicates an isomer of the listed compound.

Commonwealth of Pennsylvania Lab Certification No. 36-037

01998	PCB-1254	11097-69-1	19.3	1.04	5.33	mg/kg	250
01999	PCB-1260	11096-82-5	9.41 J	3.45	10.4	mg/kg	250

Due to interfering peaks on the chromatogram, the values reported represent the lowest reporting limits obtainable for 4,4'-DDE, and endrin aldehyde.

Despite cleanup methods, we were unable to reach our usual reporting limits.

Accurate surrogate recoveries could not be determined due to the dilution required for analysis of the sample.

The GC/MS volatile analysis was performed according to the high level soil method due to the level of target compounds. Therefore, the reporting limits were raised.

Surrogate recoveries were outside of QC limits for the GC/MS volatile fraction. The analysis was repeated and out of specification surrogate recoveries were again observed indicating a matrix effect.

00890 VOA GC/MS Library Search

The results from the volatile library search are listed on the attached FORM 1 - VOA-TIC. The qualifiers appearing in the "Q" column are defined on the back of this form.

00893 Semivolatile Library Search

The results from the semivolatile library search are listed on the attached FORM 1 - SV-TIC. The qualifiers appearing in the "Q" column are defined on the back of this form. An "X" indicates an isomer of the listed compound.

Due to interfering peaks on the chromatogram, the values reported represent the lowest reporting limits obtainable for 4,4'-DDE, endrin, and endrin aldehyde.

Despite cleanup methods, we were unable to reach our usual reporting limits.

The GC/MS volatile internal standard peak areas were outside the QC limits for both the initial analysis and the re-analysis. The values reported here are from the initial analysis of the sample.

2-Chloroethyl vinyl ether is an acid labile compound and cannot be reported in this sample due to the acid preservation of the samples and standards.

00890 VOA GC/MS Library Search

The results from the volatile library search are listed on the attached FORM 1 - VOA-TIC. The qualifiers appearing in the "Q" column are defined on the back of this form.

00893 Semivolatile Library Search

The results from the semivolatile library search are listed on the attached FORM 1 - SV-TIC. The qualifiers appearing in the "Q" column are defined on the back of this form. An "X" indicates an isomer of the listed compound.

Commonwealth of Pennsylvania Lab Certification No. 36-037

Accurate surrogate recoveries could not be determined due to the dilution required for analysis of the sample.

Due to interfering peaks on the chromatogram, the values reported represent the lowest reporting limits obtainable for 4,4'-DDE, dieldrin, endrin, and endrin aldehyde.

Despite cleanup methods, we were unable to reach our usual reporting limits.

2-Chloroethyl vinyl ether is an acid labile compound and cannot be reported in this sample due to the acid preservation of the samples and standards.

Matrix QC was performed on this sample for the GC/MS volatile analysis.

Please see the attached QC summary report for compounds showing a matrix bias.							

00890 VOA GC/MS Library Search

The results from the volatile library search are listed on the attached FORM 1 - VOA-TIC. The qualifiers appearing in the "Q" column are defined on the back of this form.

00893 Semivolatile Library Search

The results from the semivolatile library search are listed on the attached FORM 1 - SV-TIC. The qualifiers appearing in the "Q" column are defined on the back of this form. An "X" indicates an isomer of the listed compound.

Commonwealth of Pennsylvania Lab Certification No. 36-037

06972	Zinc	7440-66-6	6,020.	4.96	21.6	mg/kg	10
The quantitation limits for thallium and zinc were increased due to high amounts of iron in the sample.							
00111	Moisture	n.a.	10.0	0.50	0.50	%	1
"Moisture" represents the loss in weight of the sample after oven drying at 103 - 105 degrees Celsius. The moisture result reported above is on an as-received basis.							
05895	Total Cyanide	57-12-5	4.2	0.19	0.53	mg/kg	1
This sample was reprepared and reanalyzed to confirm the non-homogeneity of the sample for cyanide. The results obtained for the second trial background and duplicate were <.18 mg/kg and 8.1 mg/kg on an as-received basis.

01999	PCB-1260	11096-82-5	18.1	3.06	9.17	mg/kg	250

Accurate surrogate recoveries could not be determined due to the dilution required for analysis of the sample.

Due to interfering peaks on the chromatogram, the values reported represent the lowest reporting limits obtainable for 4,4'-DDE, dieldrin, endrin and endrin aldehyde.

Despite cleanup methods, we were unable to reach our usual reporting limits.

07587	Acrylonitrile	107-13-1	N.D.	0.88	4.4	mg/kg	197.16

The GC/MS volatile analysis was performed according to the high level soil method due to the level of target compounds. Therefore, the reporting limits were raised.

Surrogate recoveries were outside of QC limits for the GC/MS volatile fraction due to the dilution needed to perform the analysis.

#### 00890 VOA GC/MS Library Search

The results from the volatile library search are listed on the attached FORM 1 - VOA-TIC. The qualifiers appearing in the "Q" column are defined on the back of this form.

#### 00893 Semivolatile Library Search

The results from the semivolatile library search are listed on the attached FORM 1 - SV-TIC. The qualifiers appearing in the "Q" column are defined on the back of this form. An "X" indicates an isomer of the listed compound.

Commonwealth of Pennsylvania Lab Certification No. 36-037

Accurate surrogate recoveries could not be determined due to the dilution required for analysis of the sample.

Due to interfering peaks on the chromatogram, the values reported represent the lowest reporting limits obtainable for 4,4'-DDE, dieldrin, endrin, and endrin aldehyde.

Despite cleanup methods, we were unable to reach our usual reporting limits.

CAT No.	Analysis Name	CAS Number	Dry Result	Dry Method Detection Limit*	Dry Limit of Quantitation	Units	Dilution Factor
Due to the sample matrix an initial dilution was necessary to perform the analysis. Therefore, the reporting limits for the GC/MS semivolatile compounds were raised.							
Surrogate recoveries were outside of QC limits for the GC/MS semivolatile compounds due to the dilution needed to perform the analysis.

The GC/MS volatile analysis was performed according to the high level soil method due to the level of target compounds. Therefore, the reporting limits were raised.

Surrogate recoveries were outside of QC limits for the GC/MS volatile fraction due to the dilution needed to perform the analysis.

#### 00890 VOA GC/MS Library Search

The results from the volatile library search are listed on the attached FORM 1 - VOA-TIC. The qualifiers appearing in the "Q" column are defined on the back of this form.

#### 00893 Semivolatile Library Search

The results from the semivolatile library search are listed on the attached FORM 1 - SV-TIC. The qualifiers appearing in the "Q" column are defined on the back of this form. An "X" indicates an isomer of the listed compound.

Commonwealth of Pennsylvania Lab Certification No. 36-037

Accurate surrogate recoveries could not be determined due to the dilution required for analysis of the sample.

Due to the nature of the sample extract matrix, a dilution was used for the analysis. The reporting limits were raised accordingly.
