REMOVAL SUPPORT TEAM 2  
EPA CONTRACT EP-W-06-072

March 6, 2013

Mr. Louis DiGuardia, On-Scene Coordinator  
U.S. Environmental Protection Agency  
Removal Action Branch  
2890 Woodbridge Avenue  
Edison, NJ 08837

**EPA CONTRACT No.: EP-W-06-072**

**TDD No.: TO-0027-0029**

**DOCUMENT CONTROL No.: RST 2-02-F-1759**

**SUBJECT: FINAL REMOVAL ASSESSMENT SAMPLING TRIP REPORT  
READBURN WOOD TAR SITE, HANCOCK, DELAWARE COUNTY, NY**

Dear Mr. DiGuardia,

Enclosed please find the Final Removal Assessment Sampling Trip Report for the soil, sediment, waste, and groundwater (seep) sampling event conducted at the Readburn Wood Tar Site located in Hancock, New York. The sampling event was conducted at the Site between August 22 and 24, 2011. The U.S. Environmental Protection Agency comments regarding the Draft Removal Assessment Sampling Trip Report have been incorporated.

If you have any questions, please do not hesitate to call me at (732) 585-4423.

Sincerely,

Weston Solutions, Inc.

A handwritten signature in black ink, appearing to read "Joel Siegel".

Joel Siegel  
Removal Support Team 2  
Site Project Manager

Enclosure

## **FINAL REMOVAL ASSESSMENT SAMPLING TRIP REPORT**

**SITE NAME:** Readburn Wood Tar  
**DC No.:** RST 2-02-F-1759  
**TDD No.:** TO-0027-0029

**EPA SITE I.D. NO.:** NYC200400216

**SAMPLE DATES:** August 22 through 24, 2011

**1. Site Location:** Readburn Road  
Hancock, New York  
(Refer to Attachment A, Figure 1)

**2. Sample Locations and Descriptions:** Refer to Attachment A, Figure 2 - Sample Location Map (August 2011) and Attachment B, Table 1 - Sample Collection Information Table and Table 2 - Locational Data Table

### **3. Laboratories Receiving Samples:**

The following laboratory was utilized during the soil, sediment, waste, and groundwater (seep) sampling event:

<b>Sample Matrix</b>	<b>Analyses</b>	<b>Laboratory</b>
Soil, Sediment, Groundwater (Seep)	TCL VOCs, TCL SVOCs, TAL Metals	SERAS/Lockheed Martin 2890 Woodbridge Avenue Edison, NJ 08837 (732) 321-4200
Waste	TCLP VOCs, TCLP SVOCs, TCLP Metals, TCLP Pesticides, TCLP Herbicides	

**SVOCs** = Semivolatile Organic Compounds      **TAL** = Target Analyte List

TCLP = Toxicity Characteristic Leaching Procedure

SERAS= Scientific Engineering Response and Analytical Services

#### **4. Sample Dispatch Data:**

On August 22, 2011, 22 surface soil samples, including one field duplicate, and one rinsate blank sample were shipped by Weston Solutions, Inc., Removal Support Team 2 (RST 2) to the Scientific Engineering Response and Analytical Services (SERAS)/Lockheed Martin Laboratory located in Edison, New Jersey for target compound list (TCL) volatile organic compound (VOC), TCL semivolatile organic compound (SVOC), and target analyte list (TAL) metal analyses. All samples were shipped under FedEx Airbill No. 873981760309 and Traffic Report No. 2-081911-102737-0002.

On August 23, 2011, 15 surface soil samples, including one field duplicate, five subsurface soil samples, and one rinsate blank sample were shipped by RST 2 to the SERAS/Lockheed Martin Laboratory located in Edison, New Jersey for TCL VOC, TCL SVOC, and TAL metal analyses. In addition, two composite waste samples were also shipped by RST 2 to the SERAS/Lockheed Martin Laboratory for toxicity characteristic leaching procedure (TCLP) VOC, TCLP SVOC, TCLP metal, TCLP pesticide, and TCLP herbicide analyses. All samples were shipped under FedEx Airbill No. 875094866087 and Traffic Report No. 2-082311-091153-0003.

On August 24, 2011, nine surface soil samples, one subsurface soil sample, five sediment samples, one groundwater (seep) sample, one rinsate blank sample, and one trip blank sample were hand-delivered by RST 2 to the SERAS/Lockheed Martin Laboratory located in Edison, New Jersey for TCL VOC, TCL SVOC, and TAL metal analyses. All samples were hand-delivered to the laboratory under Traffic Report No. 2-082411-083824-0004.

Sample collection information for the August 2011 sampling event conducted at the Readburn Wood Tar Site (the Site) is provided in Attachment B, Table 1 – Sample Collection Information Table.

Attachment C includes copies of the Traffic Reports and the FedEx airbills.

## **5. On-Site Personnel:**

<u>Name</u>	<u>Representing</u>	<u>Duties on Site</u>
Louis DiGuardia	U.S. EPA, Region II	On-Scene Coordinator
Joel Siegel	RST 2, Region II	Site Project Manager, Site QA/QC, Site Health and Safety, Sample Collection and Management
David Maio	Weston Solutions, Inc.	Sample Collection and Management
Ryan Beachner	Weston Solutions, Inc.	Sample Collection and Management, Locational Data Collection
Eric Rubin	Weston Solutions, Inc.	Sample Collection and Management

## **6. Investigation Summary:**

In December 2007, five groundwater monitoring wells (RWT-MW-01S, RWT-MW-02S, RWT-MW-02D, RWT-MW-03S and RWT-MW-03D) were installed by the New York State Department of Environmental Conservation (NYSDEC) to facilitate the investigation of suspected groundwater contamination at the Site.

In August 2008, RST 2 conducted a soil sampling event to identify the type of contamination present on the Site. Soil samples collected during the August 2008 sampling event were analyzed for TCL VOCs, TCL SVOCs, and TAL metals.

In December 2008, additional soil sampling was conducted at the Site to further delineate the areas of contamination and the five on-site monitoring wells were sampled. All soil and groundwater samples collected during this event were analyzed for TCL VOCs, TCL SVOCs, and TAL metals.

In July 2009, RST 2 conducted an additional groundwater investigation at the Site. Groundwater samples were collected from all five on-site monitoring wells and additionally, one portable water sample was collected from a kitchen faucet located within an on-site residence. All aqueous samples collected during this event were analyzed for TCL VOCs, TCL SVOCs, and TAL metals.

In September 2010, additional groundwater and potable water sampling was conducted at the Site. All aqueous samples collected during this event were analyzed for TCL VOCs, TCL SVOCs, and TAL metals, including mercury.

The objective of the current Removal Assessment of the Site was to investigate surface and subsurface soils to determine the extent of contamination that was previously identified at the Site in historic sampling events. As part of the investigation, test pits were excavated for sample collection and inspection of the subsurface materials. The foundation slab of a former on-site facility building was also located and identified. A groundwater seep discharging from the Site into the adjacent Read Creek was sampled to determine if the groundwater seep contained any contaminants that may be discharging into the creek. Sediment samples were also collected from Read Creek to determine if surface water runoff from the Site had impacted the creek sediments.

## **7. Investigation Review and Methodology:**

### **7.1 Investigation and Sample Collection Methodology**

A subcontractor, LCP Group, Inc. of Vestal, New York was procured by RST 2 to provide subsurface utility locating services, brush clearing services, and to provide a backhoe and operator for excavating test pits at the Site. Brush clearing commenced on Monday, August 22, 2011 at 0900 hours. Prior to excavating any test pits, the area was first cleared by the subcontractor of any underground utilities. The test pits were advanced to allow subsurface soil sampling as well as visually examine the subsurface in the area where a facility building occupied the Site during former on-site operations. The backhoe was used by the subcontractor to determine the approximate extent of the former foundation of the facility building, and to identify if any soil beneath the former building had been impacted by historical on-site operations.

As part of the August 2011 Removal Assessment, 45 surface soil samples, including two field duplicates, six test pit subsurface soil samples, five sediment samples, one groundwater (seep) sample, one ash/cinder sample, and two waste samples were collected for laboratory analyses. The sample nomenclature reflects the sample location. The following paragraph explains sample nomenclature utilized as part of the Removal Assessment.

S-001-0006-001: S refers to surface soil, 001 represents sample location number one, 0006 is the depth interval 00 – 06 inches, and the suffix 001 signifies that it is the first sample from that location. A suffix of 002 would either be a second sample from that location or a sample duplicate from the same location. Test pit samples are labeled TP-0X, where X represents the test pit number. Waste samples are designated WS-001-001 and WS-001-002. Sediment samples are designated SD-001-001 through SD-005-001. The groundwater seep sample is designated SEEP-01. Refer to Attachment B, Table 1, for sample collection information. The majority of the samples collected during this Removal Assessment were surface samples. Previous sampling events conducted at the Site included the collection of soil samples with a Geoprobe®, to investigate subsurface soils.

As part of the August 2011 Removal Assessment, a total of 15 test pits (TP-01 through TP-15) were excavated throughout the Site. A total of eight samples were collected from the excavated test pits.

Of the eight samples, six subsurface soil samples (TP-03 through TP-05, TP-07, TP-10, and TP-014) were collected from the test pits at depths ranging from 1.5 to 3.0 feet below ground surface (bgs). Two samples collected from TP-01 and TP-02 were composited and submitted for laboratory analysis as waste samples (WS-001-001 and WS-002-001). Subsurface soil samples were submitted for TCL VOC, TCL SVOC, and TAL metals analyses and the two composite waste samples were submitted for TCLP VOC, TCL SVOC, TCLP pesticide, TCLP herbicide, and TCLP metal analyses. Soil sampling was accomplished utilizing stainless steel scoops and bowls for sample collection and homogenization for samples for TCL SVOC and TCLP analyses. Plastic scoops and disposable pie pans were used for sample collection and homogenization for TAL metals analyses. Encore™ sampling devices were used to collect the samples for TCL VOC analysis. The Encores™ were pressed into the side or bottom of the hole after the soil for the other analyses had been collected. Samples for TCL VOC analysis were not homogenized. All non-dedicated sampling equipment was decontaminated after each use to prevent cross contamination.

As part of the August 2011 Removal Assessment, 45 surface soil samples (S-001-0006-001 through S-043-0006-001), including two field duplicates, were collected from locations throughout the Site based on a grid spacing of 25 feet. The surface soil samples were collected from 0 to 6 inches bgs. Surface soil samples were submitted for TCL VOC, TCL SVOC, and TAL metal analyses.

During a walk-through of the Site, a groundwater seep was observed entering Read Creek from the direction of the former facility. A groundwater sample (SEEP-01) was collected at the point of entry of the groundwater into the creek by filling the sample bottles directly from the seep. The sample was submitted for TCL VOC, TCL SVOC, and TAL metal analyses.

A wooden trough located on the eastern portion of the Site was filled with what appeared to be black soil, ash, and cinders. A sample of the content of this wooden trough (WT-01) was collected and submitted for TCL VOC, TCL SVOC, and TAL metal analyses.

As part of the August 2011 Removal Assessment, five sediment samples (SD-001-001 through SD-005-001) were collected from Read Creek. The sediment samples were submitted for TCL VOC, TCL SVOC, and TAL metal analyses.

Refer to Attachment B, Tables 3 through 6, for the August 2011 TCL VOC, TCL SVOC, TAL metal analytical summary tables and TCLP VOC, SVOC, pesticides, herbicides, and metals summery table.

## **7.2 Rinsate Blank**

One rinsate blank sample was collected daily during the August 2011 sampling event. A total of three rinsate blank samples (RB082211, RB082311, and RB082411) were collected. The rinsate blank samples were collected by running distilled/de-ionized water over decontaminated sampling equipment and capturing that water in a sample container. The samples were submitted for TCL VOC, TCL SVOC, and TAL metal analyses.

### **7.3 Laboratory Information**

Samples were submitted to the SERAS/Lockheed Martin Laboratory located in Edison, New Jersey.

### **8. Locational Data:**

RST 2 used Global Positioning System (GPS) technology to electronically document locations. Locational data was collected using a Trimble Geo-XT® GPS. A minimum of four satellites were used to collect sample location data, with a maximum position dilution of precision (PDOP) of seven. Data were differentially corrected and projected to and displayed in Latitude / Longitude, WGS 1984 datum, decimal degrees. See Attachment B, Table 2 - Locational Data Table.

### **9. Removal Assessment Photographic Documentation:**

Photographic documentation of the sampling event can be found in Attachment D.

### **10. Analytical Results**

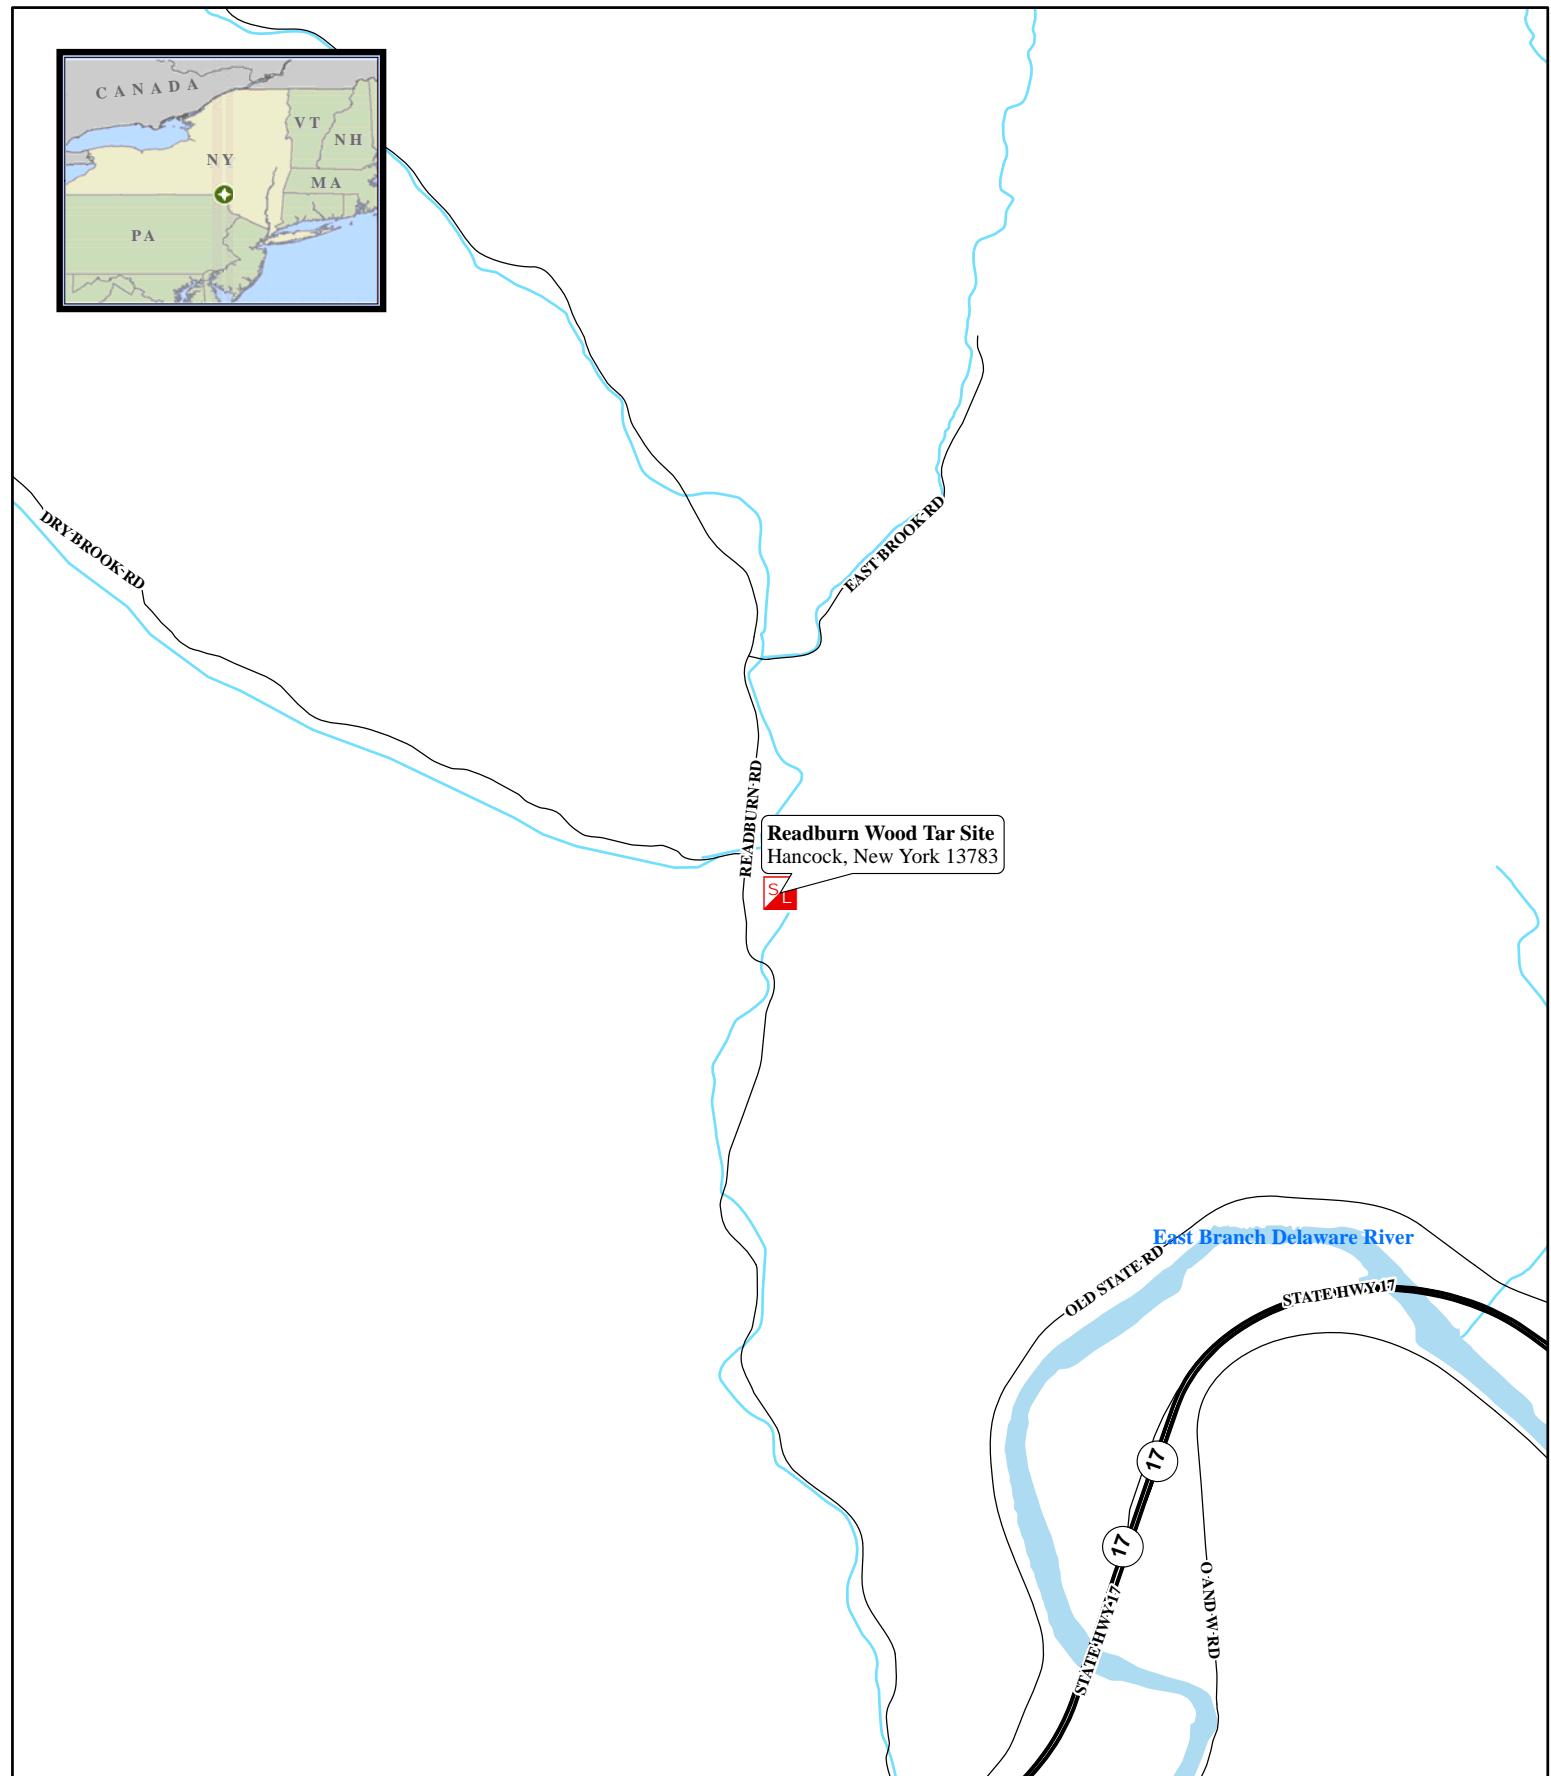

For a detailed summary of analytical results for samples analyzed for TCL VOCs, TCL SVOCs, TAL metals and TCLP VOCs, SVOCs, pesticides, herbicides and metals see Attachment B, Tables 3 through 6.

**Notes:**

1) The NYSDEC Restricted-Residential Use SCO values are obtained from NYSDEC Subpart 375-6: Remedial Program Soil Cleanup Objectives.

2) \* For constituents where the SCO was lower than the rural soil background concentration as determined by the Department of Health rural soil survey, the rural soil background concentration is used as the Track 2 SCO value for this site.

3) \*\* Units are micrograms per liter ( $\mu\text{g/L}$ ) for the SEEP-01 water sample. The action levels presented in this table are not applicable to water samples; therefore, sample SEEP-01 was not compared to NYSDEC Residential Restricted Use values.

bgs - below ground surface

EPA - U.S. Environmental Protection Agency

J - estimated value

mg/kg - milligrams per kilogram

NA - not available

NYSDEC - New York State Department of Environmental Conservation

TAL - target analyte list

R - data rejected by data validator

RST - Removal Support Team

U - not detected at or above the reporting limit

  Red highlighted and bolded values exceed the NYSDEC Residential Restricted Use values.

**Notes:**

1) The NYSDEC Restricted-Residential Use SCO values are obtained from NYSDEC Subpart 375-6: Remedial Program Soil Cleanup Objectives.

2) \* For constituents where the SCO was lower than the rural soil background concentration as determined by the Department of Health rural soil survey, the rural soil background concentration is used as the Track 2 SCO value for this site.

3) \*\* Units are micrograms per liter ( $\mu\text{g/L}$ ) for the SEEP-01 water sample. The action levels presented in this table are not applicable to water samples; therefore, sample SEEP-01 was not compared to NYSDEC Residential Restricted Use values.

bgs - below ground surface

EPA - U.S. Environmental Protection Agency

J - estimated value
