RSL:	Regional Screening Level
Site:	Former Calumet and Hecla Power Plant Site
SOP:	Standard Operating Procedure
TEM:	Transmission Electron Microscopy
USEPA:	United States Environmental Protection Agency
VOC:	Volatile Organic Compound

1.0 INTRODUCTION

This Work Plan was prepared by Amec Environment & Infrastructure, Inc. (Amec) on behalf of Honeywell Specialty Materials, LLC (Honeywell) to outline activities that will be performed during site assessment and remedial action activities at the Calumet and Hecla (C&H) Power Plant Site (Site) located at 5371 Highway M-26 in Torch Lake Township, Houghton County, Michigan (Figure 1.1). The tasks described in this Work Plan address the activities required in Section VIII “Work to Be Performed” of the Administrative Settlement Agreement and Order on Consent (AOC) between Honeywell and the United States Environmental Protection Agency (USEPA) dated April 13, 2012.

1.1 SITE HISTORY

The Site is the location of a former industrial complex that crushed or “stamped” rock from nearby copper mines. The copper ore was recovered by the stamping process. Stamping operations began in 1868. In 1968 plant operations were terminated following an employee strike. Since then, the Site has been under private ownership and is currently owned by MENINC, Inc.

Previous investigations completed by the USEPA have identified elevated concentrations of five metals (antimony, arsenic, copper, iron, and lead) in Site soils as well as asbestos containing materials (ACMs)/debris scattered around the Site.

1.2 CURRENT SITE FEATURES

The Site occupies approximately 14 acres and lies along a portion of the western shoreline of Torch Lake (Figure 1.2). Formerly, the Site housed a number of buildings related to C&H's operations, including a Boiler House, Still House, Filter House, Stamp Mill, and Power Plant. Except for remnant building foundations, all of the structures associated with the industrial complex have been demolished, the last of which was the Power Plant building which was demolished in August 2013. A modular home owned by the property owner is located near the southwest corner of the Site and was serviced by electrical, water, and natural gas utilities. The property owner has vacated the modular home in response to Site activities.

1.3 PRELIMINARY ACTIVITIES

Under approval from the USEPA, Honeywell completed several preliminary activities at the Site prior to the AOC being signed. Preliminary activities began in October 2011 and included ambient air monitoring, a Site survey, perimeter fence installation, exterior visual asbestos assessment and abatement by hand, and Power Plant basement water sampling. The completed preliminary Site activities are described in the previously approved Work Plan, dated July 2012. Laboratory analytical results of the basement water samples are included in Appendix A. A summary of field activities completed under the AOC is presented in Section 2.0.

2.0 AOC COMPLETED ACTIVITIES

The following documents describing the means and methods used to complete on-site work activities were submitted to and approved by the USEPA: Health and Safety Plan (HASP) (May 2013), Work Plan (July 2012), Site Management Plan (October 2011), Field Sampling Plan (July 2012), Contingency Plan (October 2011), and a Historical Preservation Plan (May 2012). This section summarizes the field activities and results that have been completed under the AOC.

2.1 2012 AND 2013 METALS SOIL INVESTIGATION

In 2012, a 100-foot (ft) by 100-ft surveyed grid was established across the Site and marked on the surface with survey stakes. Each grid cell was identified using a unique numbering system. Soil sample locations consisted of a single boring, with each grid cell consisting of up to four sample locations. Boring locations were identified using a combination of grid cell number and compass direction abbreviation. A single grab sample was then obtained from each boring in the shallow (0-0.5 ft), intermediate (0.5-2 ft), and deep (2-5 ft) depth intervals. Areas where the surface consisted of remnant concrete foundations were not sampled. 2012 and 2013 sample locations are shown on Figure 2.1. Soil samples collected for metals analyses were analyzed for antimony, arsenic, copper, iron, and lead using USEPA Method 6020 and Method 6010B, accordingly.

Results

Of the 387 soil samples collected in 2012 and 2013, a total of 13 samples from 11 boring locations exceeded State of Michigan Part 201/213 Non-Residential Direct Contact Cleanup Criteria (NRDCC) for arsenic or lead or a combination of the two. Eight soil samples exceeded NRDCC in the shallow depth interval (three for arsenic, four for lead, and two for both arsenic and lead) as shown on Figure 2.2. Four soil samples exceeded NRDCC for arsenic and/or lead in the intermediate depth interval (one for arsenic, one for lead, and two for both arsenic and lead) as shown on Figure 2.3. One soil sample exceeded NRDCC for arsenic in the deep depth interval as shown on Figure 2.4. Analytical summary tables are included as Tables 2.1 and 2.2. Laboratory analytical results can be found in Appendix A.

2.2 2014 METALS SOIL INVESTIGATION

In May 2014, samples were collected from 28 previously sampled locations that exceeded the RCRA “20 Times Rule” for lead and/or arsenic. Samples were collected from the 0-0.5 ft and 0.5-2 ft intervals. A limited number of samples were collected from the 2-5 ft interval. These newly collected samples were analyzed for lead and/or arsenic. Those samples with lead or arsenic concentrations above the RCRA “20 Times Rule” were analyzed by toxicity characteristic leaching procedure analyses (TCLP) to assist in waste characterization for disposal purposes. 2014 metals sample locations are shown on Figure 2.5.

Results

Of the 59 soil samples collected in 2014, one sample exceeded NRDCC for lead in the shallow range, as shown on Figure 2.6. No other samples or intervals exceeded the NRDCC.

Analytical results are summarized in Table 2.1. Laboratory analytical results are included in Appendix A.

2.3 ASBESTOS SOIL INVESTIGATION

In conjunction with the 2012 metals investigation, composite soil samples were collected in each grid and analyzed for percentage asbestos fibers. The eleven (11) grids not sampled in 2012 were characterized for percent asbestos in May 2014 (Figure 2.7). Samples were collected from the 0-0.5 ft, 0.5-2, and 2-5 ft intervals. Soil samples were analyzed using transmission electron microscopy (TEM) USEPA Method 600/R-93/116 modified with California Air Resource Board (CARB) 435 Preparation.

Results

A total of 24 soil samples obtained from 17 grid cells during the 2012 and 2013 investigations exceeded 1 percent (%) asbestos concentration (Figures 2.8, 2.9, 2.10). Of the 11 grids sampled in 2014, no samples exceeded 1% asbestos concentration. Results of the asbestos soil investigation are summarized in Table 2.3. Laboratory analytical results are included in Appendix A.

2.4 ACTIVITY BASED ASBESTOS SAMPLING

As discussed in the previously approved Work Plan, the results of the exterior asbestos assessment conducted in November 2011 were qualified using “low”, “medium”, and “high” designations based on the occurrence of visual ACMs and the level of friability of the observed material within each grid cell. Activity Based Sampling (ABS) was completed across the grids designated as “high” and half of the grids designated as “medium” in September and October 2012 (Tables 2.4 and 2.5). ABS was completed across the remaining “medium” and “low” grids, as well as grids where no asbestos was observed during the asbestos assessment, in June 2014 (Table 2.6).

As described in the previously approved 2012 Work Plan, the Site will be restricted to non-residential activities; therefore, potential risk was assessed based on the following three exposure scenarios: Commercial Worker, Recreation Child, and Recreation Adult. As shown in Table 2.7, the Commercial Worker scenario is the most restrictive; therefore, ABS results were compared to the site-specific Commercial Worker Remediation Goal of 0.00842 fibers per cubic centimeter (f/cc).

Results

Seven grid cells exceeded the Site-specific Commercial Worker asbestos remediation goal of 0.00842 fibers per cubic centimeter (f/cc) (Tables 2.4, 2.5, and 2.6). Figure 2.11 shows the locations where ABS was completed and where results exceeded the criterion. There was no correlation between the percent asbestos found during the soil investigation and the ABS grids that were above the criterion. Laboratory analytical results are included in Appendix A.

2.5 SUPPORT ZONE CONSTRUCTION

In October and November 2012, a Support Zone was constructed in the northwest corner of the Site as shown on Figure 1.2. The original Support Zone was 230 feet by 210 feet and was constructed by removing approximately 2,049 tons of Site soil. For disposal purposes, it was assumed that the soil contained ACM and was removed from the Site and disposed as asbestos contaminated soil at K&W Landfill in Ontonagon, Michigan. See Section 2.8 for loading, transportation, and disposal methods. A demarcation layer was placed and the area was backfilled and compacted with one foot of common fill (approximately 2,795 tons) and one foot of 22A gravel (approximately 3,394 tons). The Support Zone was then extended an extra 100 feet to the east to create a sufficient roadway for trucks. The additional Support Zone area was graded and a demarcation fabric was placed followed by one foot of compacted 22A gravel (approximately 1,270 tons); no additional soil was removed for construction of the extended Support Zone.

2.6 INITIAL BERM AND DEBRIS PILE REMOVAL AND DISPOSAL

As shown on Figure 2.12, there were six berms on-site. In November 2012, Berms 1 – 4 and part of Berm 5 were removed and disposed as asbestos contaminated soil at K&W Landfill (2,649 tons). See Section 2.8 for loading, transportation, and disposal methods.

2.7 INTERIOR POWER PLANT ASBESTOS ABATEMENT AND DECONTAMINATION

In October and November 2012, the interior of the Power Plant building was abated and decontaminated. The majority of the ACM was double bagged and placed in roll-off boxes for disposal. A small area in the southeast corner of the building was bulk loaded with a skid-steer loader and placed directly into a lined roll-off box. Two negative pressure containments were constructed in the northwest corner of the building in the former bathroom/office area and on the mezzanine to remove asbestos containing plaster on the walls. A total of 41.68 tons of ACM was abated from the interior of the Power Plant building and disposed of as ACM at K&W Landfill. See Section 2.8 for loading, transportation, and disposal methods. In addition to the ACM, four five-gallon buckets of universal wastes, including light ballasts and a battery pack, were removed from the building and transported offsite in September 2013 via FedEx Ground for disposal at Veolia Environmental Services in Greenville, Wisconsin.

After completion of the asbestos abatement, polyethylene sheeting was placed over the openings and windows along the north, west, and south sides of the building. The interior of the building was washed and rinse water was collected in the basement for treatment in 2014 (see Section 3.3). A high pressure low volume washer was utilized on solid interior surfaces and a low pressure garden hose was used to control the flow of water around the window openings to prevent wash water from exiting the building.

2.8 POWER PLANT DEMOLITION

The Power Plant building was demolished in August 2013. Demolition proceeded downward to the concrete floors. The roof and walls were pulled onto the building floor and sorted, cut to size, and loaded for disposal. Recyclable structural materials were segregated and then transported offsite by Schneider's Trucking for disposal at Schneider's Iron and Metal in

Ironwood, Michigan. Debris from the silo (186 tons) as well as the roofing material and remaining demolition debris (808 tons) were transported offsite by B&B Contracting Calumet, Inc. for disposal at K&W Landfill as non-friable ACM. See Section 2.8 for loading, transportation, and disposal methods.

After the building was demolished, a six-ft tall chain-link fence with barbed wire strands along the top was installed around the Power Plant foundation to prevent access to the basement during the winter of 2013-2014. Openings in the foundation were covered to add additional security. Smaller openings were covered with ¾-inch plywood anchored into the concrete. Beams were laid across larger openings, and then covered with ¾-inch plywood anchored into the concrete.

2.9 LOADING, TRANSPORTATION, AND DISPOSAL

Prior to loading asbestos contaminated soil, trucks entered the Site and were lined with 6-mil polyethylene sheeting. Once loaded, the sheeting was folded over the material and secured with adhesive to prevent airborne emissions while in transit. The tops of the trucks were tarped and secured. Each truck load containing soil and debris was properly labeled, manifested, transported, and disposed of as asbestos contaminated soil at K&W Landfill.

3.0 PROPOSED REMEDIAL ACTIONS

The following sections describe the work to be completed in 2014 and are intended to replace Sections 5.3 through 5.7 of the previously approved Work Plan, dated July 2012.

3.1 FOUNDATION SURFACE CLEANING

On-site foundations and trenches/depressions will either be cleaned or covered with clean fill as discussed during the July 10, 2013 Site walk attended by USEPA, Amec, Weston Solutions, Inc., Brandenburg Industrial Service Co., and the Michigan Department of Environmental Quality (MDEQ). A copy of the meeting minutes can be found in Appendix B. Soil, vegetation and debris on the surfaces of the former building foundations will be removed and disposed as asbestos contaminated soil. Small excavation equipment and hand tools will be used to remove the soil. The soils will be placed in lined trucks for transportation and disposal as described in Section 2.9 of this Work Plan. Once the soils are removed, the surfaces of the foundations will be cleaned with water using a moderate pressure hose. Dirt and sediment will be pushed to common collection points on the foundation to be picked up and containerized for disposal. Wash water will be collected using a wet vac or similar device, and transferred to the Power Plant basement to be treated through the on-site treatment system described in Section 3.3. Once cleaned, the foundations will remain uncovered.

Soils accumulated in the trenches and other depressions less than two ft deep in the surface of the Stamp Mill will be removed using small excavation equipment and hand tools. See Section 3.6 for procedures regarding underground utility corridors. Water may be used to loosen the material. Dust suppression methods and air monitoring will be conducted during these activities as described in Section 3.5. Soil and debris will not be removed from trenches and depressions greater than two ft deep; however visible ACM will be removed. In those areas, the soil and debris will be covered with a demarcation fabric and backfilled with a minimum of two ft of clean fill. Existing soil and debris may be repositioned to allow for level placement of the demarcation fabric

During foundation cleaning, workers will keep a minimum of six ft away from the southeast edge of the Stamp Mill foundation that is collapsing into Torch Lake. A combination of caution tape or paint, and signs will be used to prevent workers from getting within six ft of the top of slope. Soil may be removed from along the shoreline in order to blend the clean fill with the existing grade. The former Pump House will be cleaned to the extent possible, removing debris from inside to a maximum of two ft below grade. A demarcation layer will be laid and the interior backfilled with a minimum of two ft of clean fill.

3.2 CONTAMINATED SOIL

The remaining on-site berm and debris piles will be removed in 2014. The berm and debris piles will be loaded into trucks and transported offsite according to the procedures discussed in Section 2.8. The remaining berms to be removed are shown on Figure 2.12.

3.2.1 Restrictive Covenant

A restrictive covenant has been recorded on the deed for the Property by the Owner. The restrictive covenant is primarily intended to assure that the property is used only for non-residential purposes, to prevent potentially unacceptable exposures to hazardous substances remaining on the property after the removal action is complete, and to protect elements of the remedy constructed on the site (e.g., engineered barriers, monitoring devices, etc.) from disturbance or damage which could degrade their performance or effectiveness. It follows the form provided by the MDEQ to ensure that all of the state's concerns are addressed in the document. In general, it includes the following elements:

- describes historical industrial operations at the property and informs owners/operators of the potential risks posed by contaminants remaining in soil;
- prohibits use of the property for anything other than non-residential uses consistent with the exposure assumptions used by MDEQ to develop the Part 201 non-residential cleanup criteria; specifically prohibits residential use of any kind, including in-patient care facilities, residential dwellings of any kind, overnight accommodations, assisted living, day care, education or instruction of minor-age children, trailers, trailer parks, camping sites, motels, and hotels;
- prohibits the withdrawal of groundwater for consumption, irrigation, or any other use not associated with response activities at the site;
- describes the direct-contact barrier and prohibits any excavation or other intrusive activity that could affect its integrity, except during pre-approved short-term construction or repair projects or for purposes of further treating or remediating the subject contamination;
- requires repair of any damage to the barrier within 14 days, unless an environmental evaluation demonstrates that the barrier is no longer necessary in accordance with the applicable provisions and requirements of Part 201 of the NREPA as it may be amended or superseded from time to time, consistent with applicable Federal law;
- requires all excavated soil and debris generated during invasive activities on the property to be managed in accordance with the applicable requirements of Part 201 and Part 111 of the NREPA; the Resource Conservation and Recovery Act, 42 U.S.C. Section 6901 et seq.; the administrative rules promulgated there under; and all other relevant state and federal laws and regulations;
- allows the installation of permanent markers on the property, if necessary, and prohibits the owner from removing, covering, obscuring, or otherwise altering or interfering with permanent markers;
- provides access to the property for Honeywell and its representatives to perform response activities;

- requires the owner to notify the EPA and MDEQ of their intent to transfer any interest in the property;
- authorizes enforcement of the restrictions by the EPA, the State of Michigan (MDEQ), and/or Honeywell;

The restrictive covenant includes a surveyed map showing the extent of the soil cap and demarcation layer, and areas where hazardous substance may remain in soil at concentrations exceeding the Part 201 non-residential cleanup criteria.

3.2.2 Remedial Activities

Areas where soils exceed any of the following criteria will be addressed in order to provide protection against direct contact exposure: soils with target metals exceeding the NRDCC; soils exceeding the Site-specific Commercial Worker asbestos remediation goal of 0.00842 f/cc based on ABS; and soils exceeding 1% asbestos concentration.

Soils with target metals exceeding the NRDCC and soils exceeding the Site-specific Commercial Worker asbestos remediation goal based on ABS will be removed up to a maximum depth of two ft, and properly disposed at K&W Landfill. Soils below the two ft excavations will remain in place and will be covered with a geotextile/demarcation layer and two ft of clean fill material. Areas to be excavated based on metals in soil are shown on Figure 3.1; areas to be excavated based on ABS are shown of Figure 3.2. Figure 3.3 shows all areas that will be excavated.

Soils exceeding 1% asbestos concentration will remain in place and covered with a geotextile/demarcation layer followed by two ft of clean fill material. The cover system will be compliant with National Emission Standards for Hazardous Air Pollutants (NESHAP) Standard 61.151. To account for potential drainage issues, the fill material will extend beyond the grid at an approximate 1:5 slope. Areas exceeding 1% asbestos concentration that will be covered are shown on Figure 3.4.

As shown of Figure 3.3, an excavation area is located underneath the Support Zone. That portion of the Support Zone will be removed and the material staged. The area will be excavated, geotextile fabric will be placed at the bottom of the excavation, and the staged material will be used as backfill.

Areas to be either covered or excavated and backfilled will be cleared and the trees staged and left onsite. Soils will either be direct loaded, or staged on the former Still House foundation for loading. Where required, the geotextile/demarcation layer will be installed and excavations backfilled as the removal proceeds. The fill material will be from an approved offsite borrow source and compacted to a minimum of 90% of the maximum dry density. Samples of the fill material will be collected to obtain the maximum dry density and optimum moisture content by American Society for Testing and Materials (ASTM) D 1557 (Modified Proctor). The modified proctor will be used to determine the density of the material after compaction. The compaction

tests will be performed by an independent third-party soil testing service and the tests shall be completed by nuclear density method ASTM D2922.

Water will be used for dust control and to reduce air emissions during any soil disturbing activities. Dust monitoring, perimeter air monitoring and personal air monitoring will be conducted during all work activities that could generate fugitive dust as described in Section 3.5. Personnel working where there is a risk of exposure to asbestos will don Level C personal protective equipment (PPE).

3.3 POWER PLANT BASEMENT WATER TREATMENT AND DISCHARGE

A National Pollution Discharge Elimination System (NPDES) permit is not required for this Site; however, the water in the Power Plant basement will be removed, treated on-site and discharged to Torch Lake in accordance with the substantive requirements of NPDES permit guidelines. In 2014, a staging pad was constructed along the western side of the Power Plant building foundation to provide a level surface for the treatment system. The pad consisted of six inches of compacted gravel placed over the previously imported clean fill. The proposed treatment system will consist of pumps in the basement with a filter at the pump intake to minimize suspended solids discharged to the treatment system. The pumped water will be filtered using a multi-stage bag filter array, or sand filter for solids removal, and then treated by a media (e.g. zeolite) or chemical precipitation system for metals and light oils removal, then activated carbon for final treatment. The treated water will be metered and discharged to Torch Lake.

Initially, water will be pumped into a 20,000 gallon storage tank. The Contractor will sample and analyze the water in the storage tank for discharge parameters with a 24-hour turn-around time. If the stored water meets discharge limits, it will be discharged. If the stored water does not meet discharge limits, it will be returned to the water treatment system for additional treatment and then placed back in the storage tank and retested. Modifications to the treatment system will be made and this procedure repeated until the water meets discharge requirements. Additional storage tanks will be used if necessary. Once the treated water meets discharge limits the water treatment system will then be operated in a continuous mode.

Water samples will be collected weekly in order to meet the intent of the NPDES permit requirements. Monitoring parameters provided by the MDEQ Surface Water Quality Section are: carbon disulfide, bis (2-ethylhexyl) phthalate, fluoranthene, pyrene, arsenic, barium, cadmium, chromium, copper, lead, mercury, selenium, silver, zinc, Aroclor 1254, Aroclor 1260, total suspended solids, and dissolved oxygen. Samples will be obtained from the influent, between stage vessels, and effluent of the treatment system according to the procedures outlined in the previously approved Field Sampling Plan. In addition to the parameters mentioned above, there is potential for the water to contain asbestos. The asbestos fibers are captured in the sand filter bed and 1 micron filters. Upon completion of the basement dewatering, the sand bedding material will be sampled, waste profiled, and appropriately disposed. The filters will be disposed with the material.

3.4 POWER PLANT BASEMENT DECONTAMINATION

Once the Power Plant basement has been dewatered, the building floor will be removed and the basement will be assessed for debris, ACM, drums, and electrical equipment that could contain PCBs. The assessment will be a visual inspection from outside of the basement area and include the type of waste material (e.g. brick, ACM, drums, etc.), location, volume, and a determination of the means and methods to remove the various waste streams. Recyclable concrete will be cleaned and left onsite to the extent practical.

After the basement water has been dewatered, debris and drums encountered will be moved to a designated staging area within the basement. The drums will be placed in overpacks, sampled for disposal characterization, and prepared for shipment to an approved disposal facility. Written and photographic documentation will be recorded if any visible labelling is noted on the drums. Workers will don Level B PPE during the drum characterization. Open drums containing only basement water will be emptied and staged with the other metal debris for decontamination and recycling. The debris exposed by the receding water will be placed in roll-off boxes or on a staging pad, depending on the volume determined from the assessment. These materials are assumed to be contaminated with asbestos and PCBs. Any transformers and/or other equipment that could contain PCBs encountered in the basement will be removed, staged, and characterized for disposal.

Sediment samples from the basement floor will be collected for disposal characterization after the water and debris have been removed from the basement. Composite sample(s) will be collected and submitted to the laboratory for analysis of VOCs, semi-volatile organic compounds, PCBs, and Resource Conservation and Recovery Act eight metals. If the results for the “total” analyses are above the RCRA “20 Times Rule”, TCLP will be conducted for those specific compounds. The solid waste from the basement is assumed to contain asbestos and will be disposed as ACM.

Once the sediment and debris have been removed, the basement will be assessed for residual ACM and abated, as necessary. The basement walls and floors will be pressure washed and the wash water will be treated through the on-site treatment system described in Section 3.3. Removed sediment will be containerized, characterized, and properly disposed. Workers will don Level C PPE.

Once the basement is washed, the basement floors will be broken to allow drainage and left in place. The foundation walls will remain intact to the extent possible. The basement will be filled with clean fill obtained from an approved offsite borrow source and compacted to a minimum of 90% of the maximum dry density. Water will be used for dust control and to reduce air emissions during basement backfilling activities.

3.5 AIR MONITORING

Air monitoring at the Site will consist of perimeter air monitoring and total dust monitoring during work activities that could generate fugitive dust. In addition, personal air monitoring for worker exposure will be performed as outlined in the HASP.

3.5.1 Perimeter Air Monitoring

Six simultaneous air samples with dedicated portable air sampling pumps and two field blanks will be collected during major on-site activities (i.e., soil sampling, soil removal/covering, bulk asbestos abatement). The air samples will be collected at six locations along the Site perimeter, taking into account potential receptors at the following primary locations of concern: the museum adjacent to the northwest corner of the Site, the boat ramp and city park, the residence immediately south of the Site, and the commercial and residential properties to the west across Highway M-26. Sample locations will be determined using USEPA Standard Operating Procedure (SOP) #2015 Rev. #0.0 Asbestos Sampling, November 1994. Two permanent stations will be established to account for the museum and the residence immediately south of the Site. The four remaining stations will be determined daily based on wind direction and will include one upwind location and three locations positioned in a 180 degree arc in the predominant wind direction from the Site activities, taking into account the remaining receptors of concern. Two field blanks will be collected and submitted for each sampling day from a stationary location onsite (i.e., temporary office trailer). One field blank will remain open during each sampling period, and the other will remain closed.

Perimeter air samples will be collected using portable battery-operated high-volume Leland Legacy pumps, or equivalent, which are capable of operating at a maximum flow rate of between 8 to 10 liters per minute for approximately 10 hours per day. In order to shelter the pumps from the weather, the pump will be equipped with a locked enclosure case with allows for the pump to remain secure inside the case while the sample cassette is collecting air outside of the case. For security purposes the pump enclosure case will be chained to the nearest permanent site feature (i.e., fence, tree, etc.) with a chain and pad lock. Each sample cassette will consist of 25-milimeter mixed cellulose ester filters with a pore space of 0.80 microns encased in a poly-vinyl chloride outer shell.

The USEPA has interpreted that the perimeter sampling locations are considered to be located in “relatively clean atmospheres” and adjacent property usage is a mixture of private residences and retail commercial properties. Given this, the target level will be equal to the Regional Screening Level (RSL) of 0.001 fibers per cubic centimeter (f/cc) and the minimum sample volume will be 3,000 liters per day to achieve a 0.001 f/cc laboratory detection level. In order to conservatively meet the laboratory detection level, the flow rate for each sample pump will be calibrated to 6.5 liters per minute based on an 8-hour full work shift. The flow rate will be adjusted as necessary if shift hours decrease below 8 hours. Amec will record each sampling location with a global positioning system unit for future reference. Weather data for the Site (i.e. wind speed, wind direction, temperature, and barometric pressure) will be recorded hourly from an on-site portable weather station. If the prevailing wind direction changes during the day, the potential receptors will be re-evaluated and the air sampling devices relocated accordingly.

Each cassette will be properly labeled for identification and location, placed into a sealable bag, and submitted under chain of custody to QuanTEM Laboratories, LLC in Oklahoma City, OK. The asbestos samples will be analyzed for asbestos fibers utilizing National Institute for Occupational Safety and Health (NIOSH) Method 7400 with Phase Contrast Microscopy (PCM). The calculated sample volume for each air sample cassette will be included on the chain-of-

custody. In addition to the air sample cassettes, the two field blanks previously mentioned will be prepared at the Site and submitted to the analytical laboratory for PCM analysis for quality assurance/quality control purposes. In the event that PCM analysis results exceed the RSL, the samples will be additionally analyzed utilizing NIOSH Method 7402 with Transmission Electron Microscopy (TEM) to confirm asbestos fibers. If sample cassettes become overloaded, USEPA Method 600/R-93/116 with TEM will be utilized to determine the non-quantitative presence or absence of asbestos fibers.

3.5.2 Total Dust Monitoring

The purpose of conducting total dust monitoring is to evaluate the potential for the generation of nuisance dust and lead dust within the breathing zone during earthwork/demolition activities. Nuisance dust is considered as any dust particulate that is inert or not otherwise hazardous, but if in high enough concentrations can pose a health issue. Lead in surface soils was evaluated during the USEPA's initial site assessment and found to be present in concentrations that could potentially pose as an inhalation concern in localized areas at the Site. In order to monitor potential worker exposure to lead dust, Amec developed a Site-specific action level for lead based on the maximum lead concentration (70,000 milligrams per kilogram [mg/kg]) reported from soil sample results collected during the USEPA's initial site assessment. Amec's conservative approach to developing the Site-specific action level included assuming that the percent lead is equal to the total dust detected and a safety factor of four. The Site-specific action level for lead dust was calculated to be 0.16 milligrams per cubic meter (mg/m³). The method used to develop the Site-specific action limits are from a document presented in an American Industrial Hygiene Association (AIHA) publication entitled "Safety Now: Controlling Chemical Exposures at Hazardous Waste Sites with Real-time Measurements" by Christopher Marlowe (Mar 1999), published by AIHA Press. This publication presents the method used to establish action limits for particulates in the breathing zone, based on contaminant levels found in the soil. It assumes that the percent concentrations of metals in the soil is the same percentage that will be encountered in the dust in the breathing zone. The resulting action limit is based on the concentration of the contaminants in relation to their individual exposure limits (OSHA PEL or ACGIH TLV, whichever is the lower). The action limit is used to determine upgrade/downgrade levels of personal protective equipment.

Dust monitoring will be conducted using a hand held portable respirable dust meter during each new work task and during earthwork/demolition activities to evaluate nuisance dust in the breathing zone. Dust meter readings will be collected at a minimum of four times per hour for the first day of new work activities and two readings per hour thereafter. Dust monitoring will be conducted in the breathing zone and at the location most likely to generate dust (i.e., location of the work activity) and along the perimeter of the Site fence line. Dust monitoring readings will be allowed to stabilize at perimeter air sampling locations. Dust monitoring readings will be compared to the Site-specific action level of 0.16 mg/m³. If dust monitoring readings exceed action levels, dust suppression methods will be required. Dust suppression methods will include manually applying water through a hose and/or water truck equipped with sprayers. Dust monitoring readings collected at the location of work activity and at perimeter air sampling locations will be recorded on Dust Monitoring Record Sheets.

In areas where high lead levels are expected to be present, personal sampling will be conducted to confirm levels in the breathing zone are below the OSHA PEL of 0.05 mg/m³. Personal sampling for lead is summarized below.

3.5.3 Personal Monitoring

Personal monitoring will be undertaken to characterize the worker exposure to lead through the monitoring of representative employees. Employee selection will be based on work task and duration of exposure. Sampling will be representative of a full shift and will include at least one sample for each job classification in each area. Sampling and analysis will be done in accordance with NIOSH methodology that is summarized below.

1. One worker per task per job classification will be selected. The worker selected will be the one thought to have the greatest potential exposure for the longest duration (if two workers have equal exposures, personal monitoring can be rotated if sampling is to be conducted on more than one day). The exposures to all other workers is assumed to be the same as the chosen individual, or lower.
2. Record the name, employee number, job classification, and company of all workers for whom the sample represents plus record the date(s), number, duration, and location, of each of the samples taken, including a description of the sampling procedure used to determine representative employee exposure where applicable.
3. Record the type of respiratory protection devices worn, if any, and any environmental variables (e.g., rain, mist, snow, wind, temperature) that could affect the measurement of employee exposure.
4. Full shift (at least 7 hours) breathing zone samples will be conducted using personal sampling pumps, calibrated before and after each use, and set at 2 liters per minute. Minimum sample volume is 200 liters. Two or three piece mixed cellulose-ester filters with 0.8-micrometer pore size will be used to collect the sample.
5. Collect samples, closed face, and ship together along with one open and one closed blank. Open blanks are filter cassettes that are handled in the same manner that the samples are, except that no air is drawn through them (e.g., remove the end plugs and store until sampling is complete, then replace the plugs.) Closed blanks are media blanks to ensure that the cassettes were not contaminated prior to sampling.
6. Samples will be analyzed using NIOSH method 7082 (Atomic Absorption).
7. At least one sample per task per site location will be taken in the initial monitoring phase.
 - a. If the results show lead levels below 0.03 mg/m³, no further testing will be required in that area for that task.
 - b. If levels are found to be above 0.03 mg/m³, repeat testing may be needed if task duration is longer than 3 months.

- c. If conditions or tasks change that may result in new or additional exposures to lead, additional samples will be taken.
8. Notify all affected workers (both AMEC and subcontractor personnel), in writing, of the results of the analysis within 5 working days of their receipt. Affected workers include not only the worker wearing the pump and filter, but also the others working in the same general area as well.

3.6 UNDERGROUND UTILITY CORRIDORS

During the 2012 construction, several underground utility corridors were discovered. The approximate locations of the utility corridors are shown on Figure 3.4, and are based on field observations and historical Site maps. The historical Site maps do not show the locations of many of the utility corridors found in the field so it is anticipated that additional utility corridors may be discovered during 2014 construction activities. The utility corridors range from concrete slab to brick arch and are as large as six ft by six ft. The majority of the utility corridors are approximately two feet below ground surface; however, with the grade changes on Site some may be closer to the surface. The utility corridors will be addressed as described in the attached SOP – Underground Utility Corridors (Appendix C).

3.7 SITE RESTORATION

Areas of the Site will be restored as the work progresses. Six inches of topsoil will be placed over backfilled areas and then seeded. Once the vegetation is established, the temporary Soil Erosion and Sedimentation Controls will be removed. The decontamination pads will be removed and disposed. The perimeter fence will be re-installed (if removed during the activities) along the property line to the north, west and south sides of the Site. No fence will be installed along the east (lakeshore) side. Once Site restoration is complete, Site control and maintenance will be the responsibility of the property owner.

3.8 DUE CARE

In general, MDEQ Section 20107a “due care” regulations require the current owners and operators of contaminated property (i.e., Part 201 facilities) to take reasonable steps to prevent unacceptable exposure to hazardous substances and to avoid exacerbating existing contamination at the facility.

Where applicable, the “due care” measures to be taken by Honeywell to appropriately manage onsite and offsite exposures to hazardous substances during its remediation activities are described in the preceding tasks. Additional detail concerning the protection of onsite workers and potential offsite receptors is provided in the approved Quality Assurance Project Plan and the Health and Safety Plan. The facility’s owners and future operators are responsible for compliance with Section 20107a with respect to their own activities before, during, and after Honeywell’s implementation of the response activities described in this plan.

4.0 SCHEDULE

An updated schedule is included in Appendix E.

NOTES:

% - percent asbestos fibers per sample weight
PR - poor/no recovery due to probe refusal
UA - Soil boring location was unaccessable due to remnant structures and therefore no sample was collected
Analysis was performing using CARB 435 Preparation Method and PLM USEPA Method 600/R-93/116
1.0 Analytical result exceeds laboratory reporting limit
1.0 Analytical result exceeds 1% asbestos concentration.

NOTES:

s / cc - structures per cubic centimeter

O - Sample filter was overloaded with particulates, but the result was estimated

X- Sample filter was occluded and could not be analyzed due to high amount of particulates present

TEM - Transmission Electron Microscopy

Results are compared to a site specific "Commercial Worker" remediation goal of 0.00842 fiber per cubic centimeter (f/cc)

Highlighted cells exceed "Commercial Worker" remediation goal

<0.0050 - Sample result was reported below the method detection limit

Analysis performed using TEM ISO Method 10312

Table 2.7
Exposure Risk Scenarios for Lake Linden Site

	Exposure Time (Days)	Exposure Frequency (Days)	Exposure Duration (Years)	Average Time (Days)	Inhalation Unit Risk (f/cc)	Acceptable Risk (Cancer Risk 1×10^{-4})	Conc. In Air (Remediation Goal) f/cc
Commercial Worker	0.33	160	25	25550	0.23	0.0001	0.00842
Recreation Child	0.08	60	10	25550	0.23	0.0001	0.23143
Recreation Adult	0.08	60	20	25550	0.23	0.0001	0.11572

Calculation to Determine Concentration in Air

$$CA = \frac{(\text{Risk} \times AT)}{ET \times ED \times EF \times IU} \text{ where}$$

Risk is the EPA Acceptable Exposure F (1×10^{-4})

AT is the Average Time or 365 days x lifetime (70 years)

CA is Concentration in Air

ET is Exposure Time (day)

EF is Exposure Frequency (Days)

ED is Exposure Duration

IUR is inhalation unit risk (EPA IRIS Database)

Assumptions: Commercial worker:

8 hours per day for 25 years

5 days a week for 8 months -- the other four months the site is snow-covered

Standard lifetime exposure risk (inhalation unit risk -- 70 years)

Assumption 2: Recreation Child

2 hours per day

3 days a week for 5 months (May through September) for ten years

Standard lifetime exposure risk (inhalation unit risk -- 70 years)

Assumption 3: Recreation Adult

2 hours per day

3 days per week for 5 months (May through September) for 20 years

Standard lifetime exposure risk (inhalation unit risk -- 70 years)

Qualifiers

GC/MS VOA

Qualifier	Qualifier Description
U	Indicates the analyte was analyzed for but not detected.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

GC/MS Semi VOA

Qualifier	Qualifier Description
U	Indicates the analyte was analyzed for but not detected.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
*	LCS or LCSD exceeds the control limits
F	MS or MSD exceeds the control limits

GC Semi VOA

Qualifier	Qualifier Description
U	Indicates the analyte was analyzed for but not detected.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

Metals

Qualifier	Qualifier Description
U	Indicates the analyte was analyzed for but not detected.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
B	Compound was found in the blank and sample.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
☼	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CNF	Contains no Free Liquid
DL, RA, RE, IN	Indicates a Dilution, Reanalysis, Re-extraction, or additional Initial metals/anion analysis of the sample
EDL	Estimated Detection Limit
EPA	United States Environmental Protection Agency
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
ND	Not detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
RL	Reporting Limit
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

Narrative

CASE NARRATIVE

Client: AMEC E&I, Inc

Project: Honeywell Site in Houghton, MI

Report Number: 240-5811-1

With the exceptions noted as flags or footnotes, standard analytical protocols were followed in the analysis of the samples and no problems were encountered or anomalies observed. In addition all laboratory quality control samples were within established control limits, with any exceptions noted below. Each sample was analyzed to achieve the lowest possible reporting limit within the constraints of the method. In some cases, due to interference or analytes present at high concentrations, samples were diluted. For diluted samples, the reporting limits are adjusted relative to the dilution required.

TestAmerica North Canton attests to the validity of the laboratory data generated by TestAmerica facilities reported herein. All analyses performed by TestAmerica facilities were done using established laboratory SOPs that incorporate QA/QC procedures described in the application methods. TestAmerica's operations groups have reviewed the data for compliance with the laboratory QA/QC plan, and data have been found to be compliant with laboratory protocols unless otherwise noted below.

The test results in this report meet all NELAP requirements for parameters for which accreditation is required or available. Any exceptions to NELAP requirements are noted in this report. Pursuant to NELAP, this report may not be reproduced, except in full, without the written approval of the laboratory.

Calculations are performed before rounding to avoid round-off errors in calculated results.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

All solid sample results are reported on an "as received" basis unless otherwise indicated by the presence of a % solids value in the method header.

This laboratory report is confidential and is intended for the sole use of TestAmerica and its client.

RECEIPT

The samples were received on 11/11/2011; the samples arrived in good condition, properly preserved and on ice. The temperatures of the coolers at receipt were 1.8, 2.1, 2.2, 2.5, 2.9 and 3.0 C.

VOLATILE ORGANIC COMPOUNDS (GC-MS)

Samples LLI01-BS01-0000-WSXX (240-5811-1), LLI01-BS02-0000-WSXX (240-5811-2), LLI01-BS03-0000-WSXX (240-5811-3), LLI01-BS04-0000-WSXX (240-5811-4), LLI01-BS05-0000-WSXX (240-5811-5), LLI01-BS06-0000-WSXX (240-5811-6), LLI01-BS07-0000-WSXX (240-5811-7), LLI01-BS08-0000-WSXX (240-5811-8), LLI01-BS09-0000-WSXX (240-5811-9), LLI01-BS10-0000-WSXX (240-5811-10), LLI01-BS10-0000-WSFD (240-5811-11) and TRIP BLANKS (240-5811-12) were analyzed for volatile organic compounds (GC-MS) in accordance with EPA SW-846 Method 8260B. The samples were analyzed on 11/18/2011 and 11/22/2011.

Acetone was detected in method blank MB 240-23979/5 at a level that was above the method detection limit but below the reporting limit. The value should be considered an estimate, and has been flagged "J". If the associated sample reported a result above the MDL and/or RL, the result has been "B" flagged.

Methylene Chloride was detected in method blank MB 240-24252/5 at a level that was above the method detection limit but below the reporting limit. The value should be considered an estimate, and has been flagged "J". If the associated sample reported a result above the MDL and/or RL, the result has been "B" flagged. Refer to the QC report for details.

Case Narrative

Client: AMEC E&I, Inc
Project/Site: Honeywell Site in Houghton, MI

TestAmerica Job ID: 240-5811-1

Job ID: 240-5811-1 (Continued)

Laboratory: TestAmerica North Canton (Continued)

No other difficulties were encountered during the VOCs analyses. All other quality control parameters were within the acceptance limits.

SEMIVOLATILE ORGANIC COMPOUNDS (GC-MS)

Samples LLI01-BS01-0000-WSXX (240-5811-1), LLI01-BS02-0000-WSXX (240-5811-2), LLI01-BS03-0000-WSXX (240-5811-3), LLI01-BS04-0000-WSXX (240-5811-4), LLI01-BS05-0000-WSXX (240-5811-5), LLI01-BS06-0000-WSXX (240-5811-6), LLI01-BS07-0000-WSXX (240-5811-7), LLI01-BS08-0000-WSXX (240-5811-8), LLI01-BS09-0000-WSXX (240-5811-9), LLI01-BS10-0000-WSXX (240-5811-10) and LLI01-BS10-0000-WSFD (240-5811-11) were analyzed for semivolatile organic compounds (GC-MS) in accordance with EPA SW-846 Method 8270C. The samples were prepared on 11/14/2011 and analyzed on 11/16/2011.

Surrogates are added during the extraction process prior to dilution. When the sample is diluted, surrogate recoveries are diluted out and no corrective action is required.

Caprolactam failed the recovery criteria low for LCS 240-23079/17-A. Refer to the QC report for details.

2,4-Dinitrophenol, 3,3'-Dichlorobenzidine and 4-Nitrophenol failed the recovery criteria low for the MS/MSD of sample LLI01-BS10-0000-WSXXMS/MSD (240-5811-10) in batch 240-23465. Refer to the QC report for details.

Samples LLI01-BS02-0000-WSXX (240-5811-2)[10X], LLI01-BS03-0000-WSXX (240-5811-3)[4X] and LLI01-BS07-0000-WSXX (240-5811-7)[10X] required dilution prior to analysis. The following sample(s) was diluted due to the nature of the sample matrix: LLI01-BS02-0000-WSXX (240-5811-2), LLI01-BS03-0000-WSXX (240-5811-3), LLI01-BS07-0000-WSXX (240-5811-7). The reporting limits have been adjusted accordingly.

No other difficulties were encountered during the SVOC analyses. All other quality control parameters were within the acceptance limits.

POLYCHLORINATED BIPHENYLS (PCBS)

Samples LLI01-BS01-0000-WSXX (240-5811-1), LLI01-BS02-0000-WSXX (240-5811-2), LLI01-BS03-0000-WSXX (240-5811-3), LLI01-BS04-0000-WSXX (240-5811-4), LLI01-BS05-0000-WSXX (240-5811-5), LLI01-BS06-0000-WSXX (240-5811-6), LLI01-BS07-0000-WSXX (240-5811-7), LLI01-BS08-0000-WSXX (240-5811-8), LLI01-BS09-0000-WSXX (240-5811-9), LLI01-BS10-0000-WSXX (240-5811-10) and LLI01-BS10-0000-WSFD (240-5811-11) were analyzed for polychlorinated biphenyls (PCBs) in accordance with EPA SW-846 Method 8082. The samples were prepared on 11/14/2011 and analyzed on 11/16/2011 and 11/17/2011.

Surrogates are added during the extraction process prior to dilution. When the sample dilution is 5X or greater, surrogate recoveries are diluted out and no corrective action is required.

The following samples had an unknown pattern present which did not resemble any known Aroclors: LLI01-BS01-0000-WSXX (240-5811-1) and LLI01-BS07-0000-WSXX (240-5811-7).

The following samples required a tetrabutylammonium sulfite (TBA) clean-up to reduce matrix interferences caused by sulfur: LLI01-BS02-0000-WSXX (240-5811-2), LLI01-BS06-0000-WSXX (240-5811-6), LLI01-BS07-0000-WSXX (240-5811-7).

No difficulties were encountered during the PCBs analyses. All quality control parameters were within the acceptance limits.

TOTAL RECOVERABLE METALS (ICPMS)

Samples LLI01-BS01-0000-WSXX (240-5811-1), LLI01-BS02-0000-WSXX (240-5811-2), LLI01-BS03-0000-WSXX (240-5811-3), LLI01-BS04-0000-WSXX (240-5811-4), LLI01-BS05-0000-WSXX (240-5811-5), LLI01-BS06-0000-WSXX (240-5811-6), LLI01-BS07-0000-WSXX (240-5811-7), LLI01-BS08-0000-WSXX (240-5811-8), LLI01-BS09-0000-WSXX (240-5811-9), LLI01-BS10-0000-WSXX (240-5811-10) and LLI01-BS10-0000-WSFD (240-5811-11) were analyzed for total recoverable metals (ICPMS) in accordance with EPA SW-846 Method 6020. The samples were prepared on 11/16/2011 and analyzed on 11/21/2011.

Barium, Copper and Zinc were detected in method blank MB 240-23413/1-A at levels that were above the method detection limit but below the reporting limit. The values should be considered estimates, and have been flagged "J". If the associated sample reported a result above the MDL and/or RL, the result has been "B" flagged. Refer to the QC report for details.

No other difficulties were encountered during the metals analyses. All other quality control parameters were within the acceptance limits.

TOTAL MERCURY

Samples LLI01-BS01-0000-WSXX (240-5811-1), LLI01-BS02-0000-WSXX (240-5811-2), LLI01-BS03-0000-WSXX (240-5811-3), LLI01-BS04-0000-WSXX (240-5811-4), LLI01-BS05-0000-WSXX (240-5811-5), LLI01-BS06-0000-WSXX (240-5811-6), LLI01-BS07-0000-WSXX (240-5811-7), LLI01-BS08-0000-WSXX (240-5811-8), LLI01-BS09-0000-WSXX (240-5811-9), LLI01-BS10-0000-WSXX (240-5811-10) and LLI01-BS10-0000-WSFD (240-5811-11) were analyzed for total mercury in accordance with EPA SW-846 Methods 7470A. The samples were prepared on 11/15/2011 and 11/18/2011 and analyzed on 11/16/2011 and 11/21/2011.

No difficulties were encountered during the mercury analyses. All quality control parameters were within the acceptance limits.

Accreditation may not be offered or required for all methods and analytes reported in this package. Please contact your project manager for the laboratory's current list of certified methods and analytes.

Detection Limit Exceptions Summary

Client: AMEC E&I, Inc
Project/Site: Honeywell Site in Houghton, MI

TestAmerica Job ID: 240-5811-1

The requested project specific reporting limits listed below were less than lab standard quantitation limits but greater than or equal to the lab MDL. It must be noted that results reported below lab standard quantitation limits (PQL) may result in false positive/false negative values and less accurate quantitation. Routine laboratory procedures do not indicate corrective action for detections below the laboratory's PQL.

Method	Matrix	Analyte	Units	Client RL	Lab PQL
8270C	Water	2,4,6-Trichlorophenol	ug/L	4.0	5
8270C	Water	3,3'-Dichlorobenzidine	ug/L	1.0	5
8270C	Water	Hexachlorocyclopentadiene	ug/L	5.0	10
6020	Water	Silver	ug/L	0.20	1.0

Question	Answer	Comment
Radioactivity either was not measured or, if measured, is at or below background	N/A	
The cooler's custody seal, if present, is intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	2.9/1.8/2.5/2.1/3.0/2.2
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the sample IDs on the containers and the COC.	True	
Samples are received within Holding Time.	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
VOA sample vials do not have headspace or bubble is <6mm (1/4") in diameter.	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

TestAmerica Job ID: 240-10436-1

Qualifiers

Metals

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
B	Compound was found in the blank and sample.
U	Indicates the analyte was analyzed for but not detected.
4	MS, MSD: The analyte present in the original sample is 4 times greater than the matrix spike concentration; therefore, control limits are not applicable.
F	MS or MSD exceeds the control limits

General Chemistry

Qualifier	Qualifier Description
U	Indicates the analyte was analyzed for but not detected.
B	Compound was found in the blank and sample.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
☼	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CNF	Contains no Free Liquid
DL, RA, RE, IN	Indicates a Dilution, Reanalysis, Re-extraction, or additional Initial metals/anion analysis of the sample
EDL	Estimated Detection Limit
EPA	United States Environmental Protection Agency
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
ND	Not detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RL	Reporting Limit
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

Narrative

CASE NARRATIVE

Client: AMEC Environment & Infrastructure, Inc.

Project: Honeywell Lake Linden

Report Number: 240-10436-1

With the exceptions noted as flags or footnotes, standard analytical protocols were followed in the analysis of the samples and no problems were encountered or anomalies observed. In addition all laboratory quality control samples were within established control limits, with any exceptions noted below. Each sample was analyzed to achieve the lowest possible reporting limit within the constraints of the method. In some cases, due to interference or analytes present at high concentrations, samples were diluted. For diluted samples, the reporting limits are adjusted relative to the dilution required.

TestAmerica North Canton attests to the validity of the laboratory data generated by TestAmerica facilities reported herein. All analyses performed by TestAmerica facilities were done using established laboratory SOPs that incorporate QA/QC procedures described in the application methods. TestAmerica's operations groups have reviewed the data for compliance with the laboratory QA/QC plan, and data have been found to be compliant with laboratory protocols unless otherwise noted below.

The test results in this report meet all NELAP requirements for parameters for which accreditation is required or available. Any exceptions to NELAP requirements are noted in this report. Pursuant to NELAP, this report may not be reproduced, except in full, without the written approval of the laboratory.

Calculations are performed before rounding to avoid round-off errors in calculated results.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

All solid sample results are reported on an "as received" basis unless otherwise indicated by the presence of a % solids value in the method header.

This laboratory report is confidential and is intended for the sole use of TestAmerica and its client.

RECEIPT

The samples were received on 04/20/2012; the samples arrived in good condition, properly preserved and on ice. The temperature of the cooler at receipt was 0.8 C.

DISSOLVED METALS (ICPMS)

Samples LLI01-BS11-0000-WSXX (240-10436-1), LLI01-BS12-0000-WSXX (240-10436-2) and LLI01-BS13-0000-WSXX (240-10436-3) were analyzed for dissolved metals (ICPMS) in accordance with EPA SW-846 Method 6020. The samples were prepared on 04/23/2012 and analyzed on 04/24/2012.

Barium, Copper and Zinc were detected in method blank MB 240-41173/1-B at levels that were above the method detection limit but below the reporting limit. The values should be considered estimates, and have been flagged "J". If the associated sample reported a result above the MDL and/or RL, the result has been "B" flagged. Refer to the QC report for details.

Lead failed the recovery criteria high for the MSD of sample LLI01-BS13-0000-WSXXMSD (240-10436-3) in batch 240-41434. Refer to the QC report for details.

No other difficulties were encountered during the metals analyses. All other quality control parameters were within the acceptance limits.

TOTAL RECOVERABLE METALS (ICPMS)

Case Narrative

Client: AMEC Environment & Infrastructure, Inc.
Project/Site: Honeywell Lake Linden

TestAmerica Job ID: 240-10436-1

Job ID: 240-10436-1 (Continued)

Laboratory: TestAmerica Canton (Continued)

Samples LLI01-BS11-0000-WSXX (240-10436-1), LLI01-BS12-0000-WSXX (240-10436-2), LLI01-BS13-0000-WSXX (240-10436-3), LLI01-BS14-0000-WSXX (240-10436-4) and LLI01-BS14-0000-WSFD (240-10436-5) were analyzed for total recoverable metals (ICPMS) in accordance with EPA SW-846 Method 6020. The samples were prepared on 04/24/2012 and analyzed on 04/25/2012.

Barium, Copper and Zinc were detected in method blank MB 240-41300/1-A at levels that were above the method detection limit but below the reporting limit. The values should be considered estimates, and have been flagged "J". If the associated sample reported a result above the MDL and/or RL, the result has been "B" flagged. Refer to the QC report for details.

Lead failed the recovery criteria high for the MS of sample LLI01-BS13-0000-WSXXMS/MSD (240-10436-3) in batch 240-41639. Refer to the QC report for details.

The presence of the '4' qualifier in the data indicates analytes where the concentration in the unspiked sample exceeded four times the spiking amount. Refer to the QC report for details.

No other difficulties were encountered during the metals analyses. All other quality control parameters were within the acceptance limits.

DISSOLVED MERCURY (CVAA)

Samples LLI01-BS11-0000-WSXX (240-10436-1), LLI01-BS12-0000-WSXX (240-10436-2) and LLI01-BS13-0000-WSXX (240-10436-3) were analyzed for dissolved mercury (CVAA) in accordance with EPA SW-846 Methods 7470A. The samples were prepared on 04/23/2012 and analyzed on 04/25/2012.

No difficulties were encountered during the mercury analyses. All quality control parameters were within the acceptance limits.

TOTAL MERCURY

Samples LLI01-BS11-0000-WSXX (240-10436-1), LLI01-BS12-0000-WSXX (240-10436-2), LLI01-BS13-0000-WSXX (240-10436-3), LLI01-BS14-0000-WSXX (240-10436-4) and LLI01-BS14-0000-WSFD (240-10436-5) were analyzed for total mercury in accordance with EPA SW-846 Methods 7470A. The samples were prepared on 04/23/2012, 04/24/2012 and 04/25/2012 and analyzed on 04/25/2012 and 04/26/2012.

No difficulties were encountered during the mercury analyses. All quality control parameters were within the acceptance limits.

TOTAL DISSOLVED SOLIDS

Samples LLI01-BS11-0000-WSXX (240-10436-1), LLI01-BS12-0000-WSXX (240-10436-2) and LLI01-BS13-0000-WSXX (240-10436-3) were analyzed for total dissolved solids in accordance with SM 2540C. The samples were analyzed on 04/25/2012.

No difficulties were encountered during the TDS analyses. All quality control parameters were within the acceptance limits.

TOTAL SUSPENDED SOLIDS

Samples LLI01-BS11-0000-WSXX (240-10436-1), LLI01-BS12-0000-WSXX (240-10436-2) and LLI01-BS13-0000-WSXX (240-10436-3) were analyzed for total suspended solids in accordance with SM 2540D. The samples were analyzed on 04/24/2012.

No difficulties were encountered during the TSS analyses. All quality control parameters were within the acceptance limits.

AMMONIA BY ION SELECTIVE ELECTRODE

Samples LLI01-BS11-0000-WSXX (240-10436-1), LLI01-BS12-0000-WSXX (240-10436-2), LLI01-BS13-0000-WSXX (240-10436-3), LLI01-BS14-0000-WSXX (240-10436-4) and LLI01-BS14-0000-WSFD (240-10436-5) were analyzed for ammonia by ion selective electrode in accordance with SM 4500 NH3 F. The samples were analyzed on 04/24/2012.

Ammonia was detected in method blank MB 240-41381/7 at a level that was above the method detection limit but below the reporting limit. The value should be considered an estimate, and has been flagged "J". If the associated sample reported a result above the MDL and/or RL, the result has been "B" flagged. Refer to the QC report for details.

No other difficulties were encountered during the ammonia analyses. All other quality control parameters were within the acceptance limits.

TOTAL ORGANIC CARBON

Samples LLI01-BS11-0000-WSXX (240-10436-1), LLI01-BS12-0000-WSXX (240-10436-2), LLI01-BS13-0000-WSXX (240-10436-3), LLI01-BS14-0000-WSXX (240-10436-4) and LLI01-BS14-0000-WSFD (240-10436-5) were analyzed for total organic carbon in accordance with EPA SW-846 Method 9060. The samples were analyzed on 04/24/2012.

No difficulties were encountered during the TOC analyses. All quality control parameters were within the acceptance limits.

CARBONACEOUS BIOCHEMICAL OXYGEN DEMAND

Samples LLI01-BS11-0000-WSXX (240-10436-1), LLI01-BS12-0000-WSXX (240-10436-2), LLI01-BS13-0000-WSXX (240-10436-3), LLI01-BS14-0000-WSXX (240-10436-4) and LLI01-BS14-0000-WSFD (240-10436-5) were analyzed for Carbonaceous Biochemical Oxygen Demand in accordance with SM 5210B. The samples were analyzed on 04/20/2012.

The associated CBOD samples were in an incubator that briefly dropped below the method required temp by 0.1 degree C. The samples are reported with narration. LLI01-BS11-0000-WSXX (240-10436-1), LLI01-BS12-0000-WSXX (240-10436-2), LLI01-BS13-0000-WSXX (240-10436-3), LLI01-BS13-0000-WSXX (240-10436-3 DU), LLI01-BS14-0000-WSFD (240-10436-5), LLI01-BS14-0000-WSXX (240-10436-4)

The dilution water depletion result associated with CBOD batch 41072 was higher than the method-required limit of 0.20 mg/L at 0.52 mg/L, but was below the reporting limit of 2.0 mg/L. The associated sample results are reported.

No other difficulties were encountered during the CBOD analyses. All quality control parameters were within the acceptance limits.

Method Summary

Client: AMEC Environment & Infrastructure, Inc.
Project/Site: Honeywell Lake Linden

TestAmerica Job ID: 240-10436-1

Method	Method Description	Protocol	Laboratory
6020	Metals (ICP/MS)	SW846	TAL NC
7470A	Mercury (CVAA)	SW846	TAL NC
9060	Organic Carbon, Total (TOC)	SW846	TAL NC
SM 2540C	Solids, Total Dissolved (TDS)	SM	TAL NC
SM 2540D	Solids, Total Suspended (TSS)	SM	TAL NC
SM 5210B	BOD, 5-Day	SM	TAL NC
SM4500 NH3 -F	Ammonia	SM18	TAL NC

Question	Answer	Comment
Radioactivity either was not measured or, if measured, is at or below background	N/A	
The cooler's custody seal, if present, is intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the sample IDs on the containers and the COC.	True	
Samples are received within Holding Time.	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
VOA sample vials do not have headspace or bubble is <6mm (1/4") in diameter.	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

Qualifiers

GC/MS VOA

Qualifier	Qualifier Description
U	Indicates the analyte was analyzed for but not detected.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

GC/MS Semi VOA

Qualifier	Qualifier Description
U	Indicates the analyte was analyzed for but not detected.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
B	Compound was found in the blank and sample.

GC Semi VOA

Qualifier	Qualifier Description
U	Indicates the analyte was analyzed for but not detected.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

Metals

Qualifier	Qualifier Description
U	Indicates the analyte was analyzed for but not detected.
B	Compound was found in the blank and sample.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

General Chemistry

Qualifier	Qualifier Description
B	Compound was found in the blank and sample.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
U	Indicates the analyte was analyzed for but not detected.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
α	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CNF	Contains no Free Liquid
DER	Duplicate error ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision level concentration
MDA	Minimum detectable activity
EDL	Estimated Detection Limit
MDC	Minimum detectable concentration
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
NC	Not Calculated
ND	Not detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative error ratio
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

Laboratory: TestAmerica Canton

Narrative

CASE NARRATIVE

Client: AMEC Environment & Infrastructure, Inc.

Project: Honeywell Lake Linden

Report Number: 240-29546-1

With the exceptions noted as flags or footnotes, standard analytical protocols were followed in the analysis of the samples and no problems were encountered or anomalies observed. In addition all laboratory quality control samples were within established control limits, with any exceptions noted below. Each sample was analyzed to achieve the lowest possible reporting limit within the constraints of the method. In some cases, due to interference or analytes present at high concentrations, samples were diluted. For diluted samples, the reporting limits are adjusted relative to the dilution required.

TestAmerica Canton attests to the validity of the laboratory data generated by TestAmerica facilities reported herein. All analyses performed by TestAmerica facilities were done using established laboratory SOPs that incorporate QA/QC procedures described in the application methods. TestAmerica's operations groups have reviewed the data for compliance with the laboratory QA/QC plan, and data have been found to be compliant with laboratory protocols unless otherwise noted below.

The test results in this report meet all NELAP requirements for parameters for which accreditation is required or available. Any exceptions to NELAP requirements are noted in this report. Pursuant to NELAP, this report may not be reproduced, except in full, without the written approval of the laboratory.

Calculations are performed before rounding to avoid round-off errors in calculated results.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

All solid sample results are reported on an "as received" basis unless otherwise indicated by the presence of a % solids value in the method header.

This laboratory report is confidential and is intended for the sole use of TestAmerica and its client.

RECEIPT

The samples were received on 09/27/2013; the samples arrived in good condition, properly preserved and on ice. The temperatures of the coolers at receipt were 3.6 and 5.2 C.

VOLATILE ORGANIC COMPOUNDS (GCMS)

Samples LLR01-BS12-0000-WS00 (240-29546-1) and LLR01-BS13-0000-WS00 (240-29546-2) were analyzed for volatile organic compounds (GCMS) in accordance with EPA SW-846 Method 8260B. The samples were analyzed on 10/07/2013.

Methylene Chloride was detected in method blank MB 240-104372/5 at a level that was above the method detection limit but below the reporting limit. The value should be considered an estimate, and has been flagged. If the associated sample reported a result above the MDL and/or RL, the result has been flagged. Refer to the QC report for details.

No other difficulties were encountered during the VOCs analysis. All other quality control parameters were within the acceptance limits.

SEMIVOLATILE ORGANIC COMPOUNDS (GCMS)

Samples LLR01-BS12-0000-WS00 (240-29546-1) and LLR01-BS13-0000-WS00 (240-29546-2) were analyzed for semivolatile organic compounds (GCMS) in accordance with EPA SW-846 Method 8270C. The samples were prepared on 10/02/2013 and analyzed on 10/04/2013.

Case Narrative

Client: AMEC Environment & Infrastructure, Inc.
Project/Site: Honeywell Lake Linden

TestAmerica Job ID: 240-29546-1

Job ID: 240-29546-1 (Continued)

Laboratory: TestAmerica Canton (Continued)

Surrogates are added during the extraction process prior to dilution. When the sample is diluted, surrogate recoveries are diluted out and no corrective action is required.

Bis(2-ethylhexyl) phthalate and Di-n-butyl phthalate were detected in method blank MB 240-103781/21-A at levels that were above the method detection limit but below the reporting limit. The values should be considered estimates, and have been flagged. If the associated sample reported a result above the MDL and/or RL, the result has been flagged. Refer to the QC report for details.

Insufficient sample volume was available to perform a matrix spike/matrix spike duplicate (MS/MSD) associated with batch 103781, 8270.

No other difficulties were encountered during the SVOCs analysis. All other quality control parameters were within the acceptance limits.

POLYCHLORINATED BIPHENYLS (PCBS)

Samples LLR01-BS12-0000-WS00 (240-29546-1) and LLR01-BS13-0000-WS00 (240-29546-2) were analyzed for polychlorinated biphenyls (PCBs) in accordance with EPA SW-846 Method 8082. The samples were prepared on 10/02/2013 and analyzed on 10/03/2013.

Surrogates are added during the extraction process prior to dilution. When the sample dilution is 5X or greater, surrogate recoveries are diluted out and no corrective action is required.

No difficulties were encountered during the PCBs analysis. All quality control parameters were within the acceptance limits.

TOTAL RECOVERABLE METALS (ICPMS)

Samples LLR01-BS12-0000-WS00 (240-29546-1) and LLR01-BS13-0000-WS00 (240-29546-2) were analyzed for total recoverable metals (ICPMS) in accordance with EPA SW-846 Method 6020. The samples were prepared on 09/30/2013 and analyzed on 10/02/2013.

Several analytes were detected in method blank MB 240-103469/1-A at levels that were above the method detection limit but below the reporting limit. The values should be considered estimates, and have been flagged. If the associated sample reported a result above the MDL and/or RL, the result has been flagged. Refer to the QC report for details.

The reporting limit (RL) provided for the following analyte(s) Silver falls below the laboratory's verified standard quantitation limit: LLR01-BS12-0000-WS00 (240-29546-1), LLR01-BS13-0000-WS00 (240-29546-2). Results reported below the verified standard quantitation limit have less certainty (i.e., are estimated) and must be used at the client's discretion. The continuing calibration blanks and method blanks may not support the lower RL.

No other difficulties were encountered during the metals analysis. All other quality control parameters were within the acceptance limits.

TOTAL MERCURY

Samples LLR01-BS12-0000-WS00 (240-29546-1) and LLR01-BS13-0000-WS00 (240-29546-2) were analyzed for total mercury in accordance with EPA SW-846 Methods 7470A. The samples were prepared on 09/30/2013 and analyzed on 10/01/2013.

No difficulties were encountered during the mercury analysis. All quality control parameters were within the acceptance limits.

TOTAL DISSOLVED SOLIDS

Samples LLR01-BS12-0000-WS00 (240-29546-1) and LLR01-BS13-0000-WS00 (240-29546-2) were analyzed for total dissolved solids in accordance with SM 2540C. The samples were analyzed on 09/30/2013.

No difficulties were encountered during the TDS analysis. All quality control parameters were within the acceptance limits.

TOTAL SUSPENDED SOLIDS

Samples LLR01-BS12-0000-WS00 (240-29546-1) and LLR01-BS13-0000-WS00 (240-29546-2) were analyzed for total suspended solids in accordance with SM 2540D. The samples were analyzed on 10/01/2013.

Total Suspended Solids exceeded the RPD limit for the duplicate of sample 240-29595-1. Refer to the QC report for details.

No other difficulties were encountered during the TSS analysis. All other quality control parameters were within the acceptance limits.

AMMONIA BY ION SELECTIVE ELECTRODE

Samples LLR01-BS12-0000-WS00 (240-29546-1) and LLR01-BS13-0000-WS00 (240-29546-2) were analyzed for ammonia by ion selective electrode in accordance with SM 4500 NH3 F. The samples were analyzed on 10/03/2013.

Ammonia was detected in method blank MB 240-104098/7 at a level that was above the method detection limit but below the reporting limit. The value should be considered an estimate, and has been flagged. If the associated sample reported a result above the MDL and/or RL, the result has been flagged. Refer to the QC report for details.

No other difficulties were encountered during the ammonia analysis. All other quality control parameters were within the acceptance limits.

TestAmerica Job ID: 240-13643-1

Qualifiers

Metals

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
B	Compound was found in the blank and sample.
F	MS or MSD exceeds the control limits
4	MS, MSD: The analyte present in the original sample is 4 times greater than the matrix spike concentration; therefore, control limits are not applicable.
F	RPD of the MS and MSD exceeds the control limits
U	Indicates the analyte was analyzed for but not detected.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
☼	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CNF	Contains no Free Liquid
DL, RA, RE, IN	Indicates a Dilution, Reanalysis, Re-extraction, or additional Initial metals/anion analysis of the sample
EDL	Estimated Detection Limit
EPA	United States Environmental Protection Agency
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
ND	Not detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RL	Reporting Limit
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

Narrative

CASE NARRATIVE

Client: AMEC Environment & Infrastructure, Inc.

Project: Lake Linden

Report Number: 240-13643-1

With the exceptions noted as flags or footnotes, standard analytical protocols were followed in the analysis of the samples and no problems were encountered or anomalies observed. In addition all laboratory quality control samples were within established control limits, with any exceptions noted below. Each sample was analyzed to achieve the lowest possible reporting limit within the constraints of the method. In some cases, due to interference or analytes present at high concentrations, samples were diluted. For diluted samples, the reporting limits are adjusted relative to the dilution required.

TestAmerica North Canton attests to the validity of the laboratory data generated by TestAmerica facilities reported herein. All analyses performed by TestAmerica facilities were done using established laboratory SOPs that incorporate QA/QC procedures described in the application methods. TestAmerica's operations groups have reviewed the data for compliance with the laboratory QA/QC plan, and data have been found to be compliant with laboratory protocols unless otherwise noted below.

The test results in this report meet all NELAP requirements for parameters for which accreditation is required or available. Any exceptions to NELAP requirements are noted in this report. Pursuant to NELAP, this report may not be reproduced, except in full, without the written approval of the laboratory.

Calculations are performed before rounding to avoid round-off errors in calculated results.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

All solid sample results are reported on an "as received" basis unless otherwise indicated by the presence of a % solids value in the method header.

This laboratory report is confidential and is intended for the sole use of TestAmerica and its client.

RECEIPT

The samples were received on 07/28/2012; the samples arrived in good condition, properly preserved and on ice. The temperatures of the coolers at receipt were 2.3, 2.8 and 3.3 C.

TestAmerica Job ID: 240-13643-1

Job ID: 240-13643-1 (Continued)

Laboratory: TestAmerica Canton (Continued)

LLI01-DUP01-XXXX-SSFD (240-13643-53), LLI01-DUP02-XXXX-SSFD (240-13643-54), LLI01-DUP03-XXXX-SSFD (240-13643-55) and LLI01-DUP04-XXXX-SSFD (240-13643-56) were analyzed for total metals (ICP) in accordance with EPA SW-846 Method 6010B. The samples were prepared on 08/01/2012 and 08/02/2012 and analyzed on 08/06/2012 and 08/07/2012.

Antimony was detected in method blank MB 240-52958/1-A at a level that was above the method detection limit but below the reporting limit. The value should be considered an estimate, and has been flagged "J". If the associated sample reported a result above the MDL and/or RL, the result has been "B" flagged. Refer to the QC report for details.

Copper failed the recovery criteria high for the MS and MSD of sample LLI01-48SW-0602-SSXX (240-13643-24) in batch 240-53436. Copper exceeded the rpd limit.

Antimony and Copper failed the recovery criteria low for the MS and MSD of sample LLI01-39NE-0602-SSXXMS (240-13643-47) in batch 240-53461. Iron failed the recovery criteria high for the MS and MSD. Lead failed the recovery criteria high for the MSD. Also, Antimony and Iron exceeded the rpd limit.

Samples LLI01-58SE-0602-SSXX (240-13643-2)[5X], LLI01-58SE-0205-SSXX (240-13643-3)[10X], LLI01-58SW-0602-SSXX (240-13643-6)[5X], LLI01-58SW-0205-SSXX (240-13643-7)[5X], LLI01-49NE-0605-SSXX (240-13643-10)[5X], LLI01-49NE-0205-SSXX (240-13643-11)[5X], LLI01-49NW-0602-SSXX (240-13643-13)[5X], LLI01-49NW-0205-SSXX (240-13643-14)[10X], LLI01-49SW-0602-SSXX (240-13643-16)[10X], LLI01-49SW-0205-SSXX (240-13643-17)[5X], LLI01-48SE-0602-SSXX (240-13643-21)[5X], LLI01-48SE-0205-SSXX (240-13643-22)[5X], LLI01-48SW-0006-SSXX (240-13643-23)[5X], LLI01-48SW-0602-SSXX (240-13643-24)[10X], LLI01-40NE-0602-SSXX (240-13643-29)[10X], LLI01-40NE-0205-SSXX (240-13643-30)[10X], LLI01-40NW-0006-SSXX (240-13643-31)[10X], LLI01-40NW-0602-SSXX (240-13643-32)[10X], LLI01-40NW-0205-SSXX (240-13643-33)[10X], LLI01-40SW-0205-SSXX (240-13643-36)[10X], LLI01-39SW-0006-SSXX (240-13643-39)[10X], LLI01-39SW-0602-SSXX (240-13643-40)[5X], LLI01-39NW-0006-SSXX (240-13643-42)[5X], LLI01-39NW-0205-SSXX (240-13643-43)[5X], LLI01-39NW-0602-SSXX (240-13643-44)[5X], LLI01-39NE-0006-SSXX (240-13643-45)[10X], LLI01-39NE-0205-SSXX (240-13643-46)[5X], LLI01-39NE-0602-SSXX (240-13643-47)[5X], LLI01-39SE-0006-SSXX (240-13643-48)[5X], LLI01-39SE-0205-SSXX (240-13643-49)[5X], LLI01-39SE-0602-SSXX (240-13643-50)[5X], LLI01-DUP01-XXXX-SSFD (240-13643-53)[5X], LLI01-DUP02-XXXX-SSFD (240-13643-54)[5X] and LLI01-DUP04-XXXX-SSFD (240-13643-56)[5X] required dilution prior to analysis. The reporting limits have been adjusted accordingly.

The following sample(s) was diluted due to the nature of the sample matrix: LLI01-40NE-0205-SSXX (240-13643-30), LLI01-40NW-0205-SSXX (240-13643-33), LLI01-40SW-0205-SSXX (240-13643-36). Elevated reporting limits (RLs) are provided.

No other difficulties were encountered during the metals analyses. All other quality control parameters were within the acceptance limits.

The samples were prepared on 08/01/2012 and analyzed on 08/02/2012 and 08/03/2012.

Iron was detected in method blanks MB 240-52853/1-A and MB 240-52861/1-A at levels exceeding the reporting limit. If the associated sample reported a result above the MDL and/or RL, the result has been "B" flagged.

Lead was detected in method blank MB 240-52853/1-A at a level that was above the method detection limit but below the reporting limit. The value should be considered an estimate, and has been flagged "J". If the associated sample reported a result above the MDL and/or

Case Narrative

Job ID: 240-13643-1 (Continued)

Laboratory: TestAmerica Canton (Continued)

RL, the result has been "B" flagged.

Antimony failed the recovery criteria low for the MS/MSD of sample LLI01-48SW-0602-SSXX (240-13643-24) in batch 240-53086. Iron failed the recovery criteria high.

Antimony and Iron failed the recovery criteria low for the MS/MSD of sample LLI01-48SW-0205-SSXXMS/MSD(240-13643-25) in batch 240-53086.

The presence of the '4' qualifier in the data indicates analytes where the concentration in the unspiked sample exceeded four times the spiking amount.

No other difficulties were encountered during the metals analyses. All other quality control parameters were within the acceptance limits.

The samples were analyzed on 07/31/2012.

Percent Moisture exceeded the rpd limit for the duplicate of sample LLI01-48SW-0602-SSXXDU (240-13643-24). Refer to the QC report for details.

No other difficulties were encountered during the % solids analyses. All other quality control parameters were within the acceptance limits.

Question	Answer	Comment
Radioactivity either was not measured or, if measured, is at or below background	N/A	
The cooler's custody seal, if present, is intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the sample IDs on the containers and the COC.	True	
Samples are received within Holding Time.	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
VOA sample vials do not have headspace or bubble is <6mm (1/4") in diameter.	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

Client: AMEC Environment & Infrastructure, Inc.
Project/Site: Lake Linden

TestAmerica Job ID: 240-13653-1

Qualifiers

Metals

Qualifier	Qualifier Description
B	Compound was found in the blank and sample.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
U	Indicates the analyte was analyzed for but not detected.
F	MS or MSD exceeds the control limits
4	MS, MSD: The analyte present in the original sample is 4 times greater than the matrix spike concentration; therefore, control limits are not applicable.
F	RPD of the MS and MSD exceeds the control limits

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
☼	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CNF	Contains no Free Liquid
DL, RA, RE, IN	Indicates a Dilution, Reanalysis, Re-extraction, or additional Initial metals/anion analysis of the sample
EDL	Estimated Detection Limit
EPA	United States Environmental Protection Agency
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
ND	Not detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RL	Reporting Limit
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

Narrative

CASE NARRATIVE

Client: AMEC Environment & Infrastructure, Inc.

Project: Lake Linden

Report Number: 240-13653-1

With the exceptions noted as flags or footnotes, standard analytical protocols were followed in the analysis of the samples and no problems were encountered or anomalies observed. In addition all laboratory quality control samples were within established control limits, with any exceptions noted below. Each sample was analyzed to achieve the lowest possible reporting limit within the constraints of the method. In some cases, due to interference or analytes present at high concentrations, samples were diluted. For diluted samples, the reporting limits are adjusted relative to the dilution required.

TestAmerica North Canton attests to the validity of the laboratory data generated by TestAmerica facilities reported herein. All analyses performed by TestAmerica facilities were done using established laboratory SOPs that incorporate QA/QC procedures described in the application methods. TestAmerica's operations groups have reviewed the data for compliance with the laboratory QA/QC plan, and data have been found to be compliant with laboratory protocols unless otherwise noted below.

The test results in this report meet all NELAP requirements for parameters for which accreditation is required or available. Any exceptions to NELAP requirements are noted in this report. Pursuant to NELAP, this report may not be reproduced, except in full, without the written approval of the laboratory.

Calculations are performed before rounding to avoid round-off errors in calculated results.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

All solid sample results are reported on an "as received" basis unless otherwise indicated by the presence of a % solids value in the method header.

This laboratory report is confidential and is intended for the sole use of TestAmerica and its client.

RECEIPT

The samples were received on 07/28/2012; the samples arrived in good condition, properly preserved and on ice. The temperatures of the coolers at receipt were 2.3, 2.8 and 3.3 C.

The samples were prepared on 08/02/2012 and 08/03/2012 and analyzed on 08/06/2012, 08/07/2012, 08/08/2012 and 08/09/2012.

Antimony was detected in method blanks MB 240-52958/1-A and MB 240-53023/1-A at levels that were above the method detection limit but below the reporting limit. The values should be considered estimates, and have been flagged "J". If the associated sample reported a result above the MDL and/or RL, the result has been "B" flagged.

Antimony, Copper and Iron failed the recovery criteria low for the MS and MSD of sample LLI01-03NW-0602-SSXX (240-13653-21) in batch 240-53461.

Antimony failed the recovery criteria low for the MS and MSD of sample LLI01-06NW-0205-SSXX (240-13653-52) in batch 240-53790. Iron failed the recovery criteria high. Also, Antimony exceeded the rpd limit.

Antimony and Iron failed the recovery criteria low for the MS and MSD of sample LLI01-12NW-0602-SSXX (240-13653-82) in batch 240-53436. Copper failed the recovery criteria high in the MS.

Antimony and Iron failed the recovery criteria low for the MS of sample LLI01-13NW-0205-SSXX (240-13653-88) in batch 240-53790. Antimony failed the recovery criteria low for the MSD of sample LLI01-13NW-0205-SSXXMSD (240-13653-88) in batch 240-53790.

The presence of the '4' qualifier in the data indicates analytes where the concentration in the unspiked sample exceeded four times the spiking amount. Refer to the QC report for details.

Samples LLI01-02NW-0205-SSXX (240-13653-14)[5X], LLI01-08NW-0205-SSXX (240-13653-35)[5X], LLI01-07NE-0205-SSXX (240-13653-69)[5X] and LLI01-DP09-XXXX-SSFD (240-13653-104)[5X] required dilution prior to analysis. The reporting limits have been adjusted accordingly.

The following sample(s) was diluted due to the nature of the sample matrix: LLI01-07NE-0205-SSXX (240-13653-69). Elevated reporting limits (RLs) are provided.

No other difficulties were encountered during the metals analyses. All other quality control parameters were within the acceptance limits.

The samples were analyzed on 08/01/2012.

Percent Moisture exceeded the rpd limit for the duplicates of samples LLI01-03NW-0602-SSXXDU (240-13653-21), LLI01-08SW-0602-SSXXDU (240-13653-31), LLI01-06NE-0205-SSXXDU (240-13653-49), and LLI01-06NW-0205-SSXXDU (240-13653-52). Refer to the QC report for details.

No other difficulties were encountered during the % solids analyses. All other quality control parameters were within the acceptance limits.

Question	Answer	Comment
Radioactivity either was not measured or, if measured, is at or below background	N/A	
The cooler's custody seal, if present, is intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the sample IDs on the containers and the COC.	True	
Samples are received within Holding Time.	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
VOA sample vials do not have headspace or bubble is <6mm (1/4") in diameter.	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

Definitions/Glossary

Client: AMEC Environment & Infrastructure, Inc.
Project/Site: Lake Linden

TestAmerica Job ID: 240-13671-1

Qualifiers

Metals

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
B	Compound was found in the blank and sample.
U	Indicates the analyte was analyzed for but not detected.
4	MS, MSD: The analyte present in the original sample is 4 times greater than the matrix spike concentration; therefore, control limits are not applicable.
F	MS or MSD exceeds the control limits
F	RPD of the MS and MSD exceeds the control limits

General Chemistry

Qualifier	Qualifier Description
U	Indicates the analyte was analyzed for but not detected.
B	Compound was found in the blank and sample.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
☼	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CNF	Contains no Free Liquid
DL, RA, RE, IN	Indicates a Dilution, Reanalysis, Re-extraction, or additional Initial metals/anion analysis of the sample
EDL	Estimated Detection Limit
EPA	United States Environmental Protection Agency
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
ND	Not detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RL	Reporting Limit
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

Narrative

CASE NARRATIVE

Client: AMEC Environment & Infrastructure, Inc.

Project: Lake Linden

Report Number: 240-13671-1

With the exceptions noted as flags or footnotes, standard analytical protocols were followed in the analysis of the samples and no problems were encountered or anomalies observed. In addition all laboratory quality control samples were within established control limits, with any exceptions noted below. Each sample was analyzed to achieve the lowest possible reporting limit within the constraints of the method. In some cases, due to interference or analytes present at high concentrations, samples were diluted. For diluted samples, the reporting limits are adjusted relative to the dilution required.

The 9012 Reactive Cyanide and 9034 Reactive Sulfide analysis were performed at the TestAmerica Buffalo Laboratory.

TestAmerica North Canton attests to the validity of the laboratory data generated by TestAmerica facilities reported herein. All analyses performed by TestAmerica facilities were done using established laboratory SOPs that incorporate QA/QC procedures described in the application methods. TestAmerica's operations groups have reviewed the data for compliance with the laboratory QA/QC plan, and data have been found to be compliant with laboratory protocols unless otherwise noted below.

The test results in this report meet all NELAP requirements for parameters for which accreditation is required or available. Any exceptions to NELAP requirements are noted in this report. Pursuant to NELAP, this report may not be reproduced, except in full, without the written approval of the laboratory.

Calculations are performed before rounding to avoid round-off errors in calculated results.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

All solid sample results are reported on an "as received" basis unless otherwise indicated by the presence of a % solids value in the method header.

This laboratory report is confidential and is intended for the sole use of TestAmerica and its client.

RECEIPT

The samples were received on 07/31/2012; the samples arrived in good condition, properly preserved and on ice. The temperatures of the coolers at receipt were 1.6, 2.2, 3.9, 4.2 and 4.6 C.

The samples were prepared on 08/07/2012, 08/08/2012 and 08/09/2012 and analyzed on 08/09/2012 and 08/10/2012.

Iron was detected in method blank MB 240-53541/1-A at a level exceeding the reporting limit. If the associated sample reported a result above the MDL and/or RL, the result has been "B" flagged.

Lead was detected in method blank MB 240-53603/1-A at a level that was above the method detection limit but below the reporting limit. The value should be considered an estimate, and has been flagged "J". If the associated sample reported a result above the MDL and/or RL, the result has been "B" flagged.

Copper was detected in method blank MB 240-53617/1-A at a level exceeding the reporting limit. If the associated sample reported a result above the MDL and/or RL, the result has been "B" flagged.

Antimony was detected in method blank MB 240-53618/1-A at a level exceeding the reporting limit. If the associated sample reported a result above the MDL and/or RL, the result has been "B" flagged.

Iron was detected in method blank MB 240-53618/1-A at a level that was above the method detection limit but below the reporting limit. The value should be considered an estimate, and has been flagged "J". If the associated sample reported a result above the MDL and/or RL, the result has been "B" flagged. Refer to the QC report for details.

Antimony failed the recovery criteria low for the MS of sample LLI01-DP12-XXXX-SSFD (240-13671-106) in batch 240-54150. Iron and Copper failed the recovery criteria high. For the MSD of sample LLI01-DP12-XXXX-SSFD (240-13671-106) in batch 240-54150, Antimony and Iron failed the recovery criteria low. Copper failed the recovery criteria high. Also, Copper exceeded the rpd limit.

Antimony and Iron failed the recovery criteria low for the MS of sample LLI01-15SW-0205-SSXX (240-13671-20) in batch 240-54150. Copper failed the recovery criteria high. For the MSD of sample LLI01-15SW-0205-SSXX (240-13671-20) in batch 240-54150, Antimony failed the recovery criteria low. Iron and Copper failed the recovery criteria high. Also, Iron and Copper exceeded the rpd limit.

Antimony failed the recovery criteria low for the MS of sample LLI01-11SW-0205-SSXX (240-13671-40) in batch 240-53842. Iron failed the recovery criteria high. Iron failed the recovery criteria low for the MSD of sample LLI01-11SW-0205-SSXX (240-13671-40) in batch 240-53842.

Iron failed the recovery criteria high for the MS of sample LLI01-14NW-0602-SSXX (240-13671-5) in batch 240-53842. For the MSD of sample LLI01-14NW-0602-SSXX (240-13671-5) in batch 240-53842, Antimony failed the recovery criteria low. Copper and Iron failed the recovery criteria high. Also, Copper and Iron exceeded the rpd limit.

Case Narrative

Antimony and Iron failed the recovery criteria low for the MS and MSD of sample LLI01-19NW-0205-SSXX (240-13671-65) in batch 240-53842. Copper failed the recovery criteria high.

Antimony, Copper and Iron failed the recovery criteria low for the MS of sample LLI01-20SW-0602-SSXX (240-13671-90) in batch 240-53842. For the MSD of sample LLI01-20SW-0602-SSXX (240-13671-90) in batch 240-53842, Antimony failed the recovery criteria low. Copper and Iron failed the recovery criteria high. Also, Copper and Iron exceeded the rpd limit.

The presence of the '4' qualifier in the data indicates analytes where the concentration in the unspiked sample exceeded four times the spiking amount.

Samples LLI01-14SE-0602-SSXX (240-13671-8)[5X], LLI01-14SE-0205-SSXX (240-13671-9)[5X], LLI01-14NE-0006-SSXX (240-13671-10)[5X], LLI01-14NE-0602-SSXX (240-13671-11)[5X], LLI01-15SW-0602-SSXX (240-13671-19)[10X], LLI01-17SE-0006-SSXX (240-13671-23)[5X], LLI01-11SW-0006-SSXX (240-13671-38)[5X], LLI01-18SE-0205-SSXX (240-13671-51)[5X], LLI01-18NE-0006-SSXX (240-13671-52)[5X], LLI01-19SW-0205-SSXX (240-13671-59)[5X], LLI01-19SE-0602-SSXX (240-13671-61)[5X], LLI01-19NW-0205-SSXX (240-13671-65)[5X], LLI01-28SW-0602-SSXX (240-13671-69)[5X], LLI01-28SW-0205-SSXX (240-13671-70)[5X], LLI01-28SE-0006-SSXX (240-13671-71)[10X], LLI01-28SE-0205-SSXX (240-13671-73)[5X], LLI01-28NW-0006-SSXX (240-13671-76)[5X], LLI01-27XX-0006-SSXX (240-13671-81)[100X], LLI01-20NE-0006-SSXX (240-13671-86)[5X], LLI01-20SE-0006-SSXX (240-13671-92)[5X], LLI01-21SW-0602-SSXX (240-13671-101)[5X], LLI01-DP16-XXXX-SSFD (240-13671-110)[5X], LLI01-DP17-XXXX-SSFD (240-13671-111)[10X] and LLI01-DP19-XXXX-SSFD (240-13671-113)[5X] required dilution prior to analysis. The reporting limits have been adjusted accordingly.

The following sample(s) was diluted due to the nature of the sample matrix: LLI01-11SW-0006-SSXX (240-13671-38), LLI01-19SW-0205-SSXX (240-13671-59), LLI01-DP16-XXXX-SSFD (240-13671-110). Elevated reporting limits (RLs) are provided.

No other difficulties were encountered during the metals analyses. All other quality control parameters were within the acceptance limits.

REACTIVE CYANIDE

Samples LLI01-14XX-0006-SSWC (240-13671-13) and LLI01-14XX-0602-SSWC (240-13671-14) were analyzed for reactive cyanide in accordance with EPA SW-846 Method 7.3.3. The samples were prepared on 08/02/2012 and analyzed on 08/03/2012.

No difficulties were encountered during the cyanide analyses. All quality control parameters were within the acceptance limits.

REACTIVE SULFIDE

Samples LLI01-14XX-0006-SSWC (240-13671-13) and LLI01-14XX-0602-SSWC (240-13671-14) were analyzed for reactive sulfide in accordance with EPA SW-846 Method 7.3.4. The samples were prepared on 08/02/2012 and analyzed on 08/03/2012.

Sulfide, Reactive was detected in method blank MB 480-74972/2-A at a level exceeding the reporting limit. If the associated sample reported a result above the MDL and/or RL, the result has been "B" flagged. Refer to the QC report for details.

The method blank for batch 75148 contained reactive sulfide above the method detection limit. This target analyte concentration was less than the reporting limit (RL); therefore, re-extraction and/or re-analysis of samples was not performed. LLI01-14XX-0006-SSWC (240-13671-13), LLI01-14XX-0602-SSWC (240-13671-14).

No other difficulties were encountered during the sulfide analyses. All other quality control parameters were within the acceptance limits.

PH

Samples LLI01-14XX-0006-SSWC (240-13671-13) and LLI01-14XX-0602-SSWC (240-13671-14) were analyzed for pH in accordance with EPA SW-846 Method 9045C. The samples were analyzed on 08/02/2012.

No difficulties were encountered during the pH analyses. All quality control parameters were within the acceptance limits.

PERCENT SOLIDS

Samples LLI01-14SW-0006-SSXX (240-13671-1), LLI01-14SW-0602-SSXX (240-13671-2), LLI01-14SW-0205-SSXX (240-13671-3), LLI01-14NW-0006-SSXX (240-13671-4), LLI01-14NW-0602-SSXX (240-13671-5), LLI01-14NW-0205-SSXX (240-13671-6), LLI01-14SE-0006-SSXX (240-13671-7), LLI01-14SE-0602-SSXX (240-13671-8), LLI01-14SE-0205-SSXX (240-13671-9), LLI01-14NE-0006-SSXX (240-13671-10), LLI01-14NE-0602-SSXX (240-13671-11), LLI01-14NE-0205-SSXX (240-13671-12),

The samples were analyzed on 08/02/2012.

No difficulties were encountered during the % solids analyses. All quality control parameters were within the acceptance limits.

Method Summary

Client: AMEC Environment & Infrastructure, Inc.
Project/Site: Lake Linden

TestAmerica Job ID: 240-13671-1

Method	Method Description	Protocol	Laboratory
6010B	Metals (ICP)	SW846	TAL NC
9012	Cyanide, Reactive	SW846	TAL BUF
9034	Sulfide, Reactive	SW846	TAL BUF
9045C	pH	SW846	TAL NC
Moisture	Percent Moisture	EPA	TAL NC

Question	Answer	Comment
Radioactivity either was not measured or, if measured, is at or below background	N/A	
The cooler's custody seal, if present, is intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the sample IDs on the containers and the COC.	True	
Samples are received within Holding Time.	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
VOA sample vials do not have headspace or bubble is <6mm (1/4") in diameter.	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

TestAmerica Job ID: 240-13672-1

Qualifiers

Metals

Qualifier	Qualifier Description
B	Compound was found in the blank and sample.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
U	Indicates the analyte was analyzed for but not detected.
F	MS or MSD exceeds the control limits
4	MS, MSD: The analyte present in the original sample is 4 times greater than the matrix spike concentration; therefore, control limits are not applicable.
F	RPD of the MS and MSD exceeds the control limits

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
☼	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CNF	Contains no Free Liquid
DL, RA, RE, IN	Indicates a Dilution, Reanalysis, Re-extraction, or additional Initial metals/anion analysis of the sample
EDL	Estimated Detection Limit
EPA	United States Environmental Protection Agency
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
ND	Not detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RL	Reporting Limit
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

Narrative

CASE NARRATIVE

Client: AMEC Environment & Infrastructure, Inc.

Project: Lake Linden

Report Number: 240-13672-1

With the exceptions noted as flags or footnotes, standard analytical protocols were followed in the analysis of the samples and no problems were encountered or anomalies observed. In addition all laboratory quality control samples were within established control limits, with any exceptions noted below. Each sample was analyzed to achieve the lowest possible reporting limit within the constraints of the method. In some cases, due to interference or analytes present at high concentrations, samples were diluted. For diluted samples, the reporting limits are adjusted relative to the dilution required.

TestAmerica North Canton attests to the validity of the laboratory data generated by TestAmerica facilities reported herein. All analyses performed by TestAmerica facilities were done using established laboratory SOPs that incorporate QA/QC procedures described in the application methods. TestAmerica's operations groups have reviewed the data for compliance with the laboratory QA/QC plan, and data have been found to be compliant with laboratory protocols unless otherwise noted below.

The test results in this report meet all NELAP requirements for parameters for which accreditation is required or available. Any exceptions to NELAP requirements are noted in this report. Pursuant to NELAP, this report may not be reproduced, except in full, without the written approval of the laboratory.

Calculations are performed before rounding to avoid round-off errors in calculated results.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

All solid sample results are reported on an "as received" basis unless otherwise indicated by the presence of a % solids value in the method header.

This laboratory report is confidential and is intended for the sole use of TestAmerica and its client.

RECEIPT

The samples were received on 07/31/2012; the samples arrived in good condition, properly preserved and on ice. The temperatures of the coolers at receipt were 1.6, 2.2, 3.9, 4.2 and 4.6 C.

LL101-52SE-0205-SSXX (240-13672-55), LL101-45NW-0006-SSXX (240-13672-58), LL101-45NW-0602-SSXX (240-13672-59), LL101-45NW-0205-SSXX (240-13672-60), LL101-45SW-0006-SSXX (240-13672-61), LL101-45SW-0602-SSXX (240-13672-62), LL101-45SW-0205-SSXX (240-13672-63), LL101-45NE-0006-SSXX (240-13672-64), LL101-45NE-0602-SSXX (240-13672-65), LL101-45NE-0205-SSXX (240-13672-66), LL101-54NW-0006-SSXX (240-13672-69), LL101-54NW-0602-SSXX (240-13672-70), LL101-54NW-0205-SSXX (240-13672-71), LL101-54NE-0006-SSXX (240-13672-72), LL101-54NE-0602-SSXX (240-13672-73), LL101-54NE-0205-SSXX (240-13672-74), LL101-54SE-0006-SSXX (240-13672-75), LL101-54SE-0602-SSXX (240-13672-76), LL101-54SE-0205-SSXX (240-13672-77), LL101-54SW-0006-SSXX (240-13672-78), LL101-54SW-0602-SSXX (240-13672-79), LL101-54SW-0205-SSXX (240-13672-80), LL101-71SW-0006-SSXX (240-13672-81), LL101-71SW-0602-SSXX (240-13672-82), LL101-71SW-0205-SSXX (240-13672-83), LL101-71SE-0006-SSXX (240-13672-84), LL101-71SE-0602-SSXX (240-13672-85), LL101-71SE-0205-SSXX (240-13672-86), LL101-71NW-0006-SSXX (240-13672-87), LL101-71NW-0602-SSXX (240-13672-88), LL101-71NW-0205-SSXX (240-13672-89), LL101-DP21-XXXX-SSFD (240-13672-92), LL101-DP22-XXXX-SSFD (240-13672-93), LL101-DP23-XXXX-SSFD (240-13672-94), LL101-DP24-XXXX-SSFD (240-13672-95), LL101-DP25-XXXX-SSFD (240-13672-96), LL101-DP26-XXXX-SSFD (240-13672-97), LL101-DP27-XXXX-SSFD (240-13672-98) and LL101-DP28-XXXX-SSFD (240-13672-99) were analyzed for total metals (ICP) in accordance with EPA SW-846 Method 6010B. The samples were prepared on 08/09/2012 and 08/10/2012 and analyzed on 08/10/2012, 08/11/2012, 08/13/2012 and 08/14/2012.

Antimony and Iron were detected in method blank MB 240-53618/1-A at levels that were above the method detection limit but below the reporting limit. The values should be considered estimates, and have been flagged "J". If the associated sample reported a result above the MDL and/or RL, the result has been "B" flagged.

Iron was detected in method blank MB 240-53619/1-A at a level that was above the method detection limit but below the reporting limit. The value should be considered an estimate, and has been flagged "J". If the associated sample reported a result above the MDL and/or RL, the result has been "B" flagged.

Iron was detected in method blank MB 240-54049/1-A at a level exceeding the reporting limit. If the associated sample reported a result above the MDL and/or RL, the result has been "B" flagged.

Antimony and Iron failed the recovery criteria low for the MS of sample LL101-36NW-0602-SSXX (240-13672-18) in batch 240-54316. Copper failed the recovery criteria high. For the MSD of sample LL101-36NW-0602-SSXX (240-13672-18) in batch 240-54316, Antimony failed the recovery criteria low. Copper and Iron failed the recovery criteria high. Also, Iron exceeded the rpd limit.

Antimony and Iron failed the recovery criteria low for the MS/MSD of sample LL101-43NW-0205-SSXX (240-13672-42) in batch 240-54316. Iron exceeded the rpd limit.

Antimony, Iron and Lead failed the recovery criteria low for the MS/MSD of sample LL101-54NW-0602-SSXX (240-13672-70) in batch 240-54337. Copper failed the recovery criteria high.

Antimony failed the recovery criteria low for the MS of sample LL101-71SW-0205-SSXXMS (240-13672-83) in batch 240-54316. Iron failed the recovery criteria high. Antimony and Iron failed the recovery criteria low for the MSD of sample LL101-71SW-0205-SSXXMSD (240-13672-83) in batch 240-54316.

Samples LL101-30SE-0205-SSXX (240-13672-3)[5X], LL101-30NE-0602-SSXX (240-13672-5)[5X], LL101-37NW-0205-SSXX (240-13672-11)[5X], LL101-36NE-0006-SSXX (240-13672-14)[100X], LL101-36NW-0006-SSXX (240-13672-17)[10X], LL101-36SW-0602-SSXX (240-13672-20)[4X], LL101-35NW-0006-SSXX (240-13672-24)[2X], LL101-35NE-0006-SSXX (240-13672-27)[10X], LL101-43SE-0006-SSXX (240-13672-43)[2X], LL101-43NE-0006-SSXX (240-13672-46)[2X], LL101-43SW-0006-SSXX (240-13672-48)[2X], LL101-52SE-0006-SSXX (240-13672-53)[4X], LL101-45NW-0006-SSXX (240-13672-58)[4X], LL101-45SW-0006-SSXX (240-13672-61)[4X], LL101-45SW-0602-SSXX (240-13672-62)[4X], LL101-45SW-0205-SSXX (240-13672-63)[2X], LL101-54NW-0006-SSXX (240-13672-69)[5X], LL101-54NW-0602-SSXX (240-13672-70)[5X], LL101-54NW-0205-SSXX (240-13672-71)[5X], LL101-54NE-0006-SSXX (240-13672-72)[5X], LL101-71SW-0006-SSXX (240-13672-81)[5X] and LL101-DP21-XXXX-SSFD (240-13672-92)[5X] required dilution prior to analysis. The reporting limits have been adjusted accordingly.

The following sample was diluted due to the nature of the sample matrix: LL101-30NE-0602-SSXX (240-13672-5). Elevated reporting limits (RLs) are provided.

No other difficulties were encountered during the metals analyses. All other quality control parameters were within the acceptance limits.

The samples were analyzed on 08/03/2012.

Percent Moisture exceeded the rpd limit for the duplicate of sample LL101-36NW-0602-SSXXDU (240-13672-18). Percent Moisture exceeded the rpd limit for the duplicate of sample LL101-43NW-0205-SSXXDU (240-13672-42).

No other difficulties were encountered during the % solids analyses. All other quality control parameters were within the acceptance limits.

Question	Answer	Comment
Radioactivity either was not measured or, if measured, is at or below background	N/A	
The cooler's custody seal, if present, is intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the sample IDs on the containers and the COC.	True	
Samples are received within Holding Time.	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
VOA sample vials do not have headspace or bubble is <6mm (1/4") in diameter.	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

Definitions/Glossary

Client: AMEC Environment & Infrastructure, Inc.
Project/Site: Lake Linden

TestAmerica Job ID: 240-13670-1

Qualifiers

Metals

Qualifier	Qualifier Description
B	Compound was found in the blank and sample.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
U	Indicates the analyte was analyzed for but not detected.
F	MS or MSD exceeds the control limits
4	MS, MSD: The analyte present in the original sample is 4 times greater than the matrix spike concentration; therefore, control limits are not applicable.

General Chemistry

Qualifier	Qualifier Description
U	Indicates the analyte was analyzed for but not detected.
B	Compound was found in the blank and sample.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
☼	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CNF	Contains no Free Liquid
DL, RA, RE, IN	Indicates a Dilution, Reanalysis, Re-extraction, or additional Initial metals/anion analysis of the sample
EDL	Estimated Detection Limit
EPA	United States Environmental Protection Agency
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
ND	Not detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RL	Reporting Limit
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

Narrative

CASE NARRATIVE

Client: AMEC Environment & Infrastructure, Inc.

Project: Lake Linden

Report Number: 240-13670-1

With the exceptions noted as flags or footnotes, standard analytical protocols were followed in the analysis of the samples and no problems were encountered or anomalies observed. In addition all laboratory quality control samples were within established control limits, with any exceptions noted below. Each sample was analyzed to achieve the lowest possible reporting limit within the constraints of the method. In some cases, due to interference or analytes present at high concentrations, samples were diluted. For diluted samples, the reporting limits are adjusted relative to the dilution required.

The 9012 Reactive Cyanide and 9034 Reactive Sulfide analysis were performed at the TestAmerica Buffalo Laboratory.

TestAmerica North Canton attests to the validity of the laboratory data generated by TestAmerica facilities reported herein. All analyses performed by TestAmerica facilities were done using established laboratory SOPs that incorporate QA/QC procedures described in the application methods. TestAmerica's operations groups have reviewed the data for compliance with the laboratory QA/QC plan, and data have been found to be compliant with laboratory protocols unless otherwise noted below.

The test results in this report meet all NELAP requirements for parameters for which accreditation is required or available. Any exceptions to NELAP requirements are noted in this report. Pursuant to NELAP, this report may not be reproduced, except in full, without the written approval of the laboratory.

Calculations are performed before rounding to avoid round-off errors in calculated results.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

All solid sample results are reported on an "as received" basis unless otherwise indicated by the presence of a % solids value in the method header.

This laboratory report is confidential and is intended for the sole use of TestAmerica and its client.

RECEIPT

The samples were received on 7/31/2012 9:30 AM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperatures of the 5 coolers at receipt time were 1.6° C, 2.2° C, 3.9° C, 4.2° C and 4.6° C.

Case Narrative

Client: AMEC Environment & Infrastructure, Inc.
Project/Site: Lake Linden

TestAmerica Job ID: 240-13670-1

Job ID: 240-13670-1 (Continued)

Laboratory: TestAmerica Canton (Continued)

LLI01-DP29-XXXX-SSFD (240-13670-45), LLI01-DP30-XXXX-SSFD (240-13670-46) and LLI01-DP31-XXXX-SSFD (240-13670-47) were analyzed for total metals (ICP) in accordance with EPA SW-846 Method 6010B. The samples were prepared on 08/03/2012 and 08/07/2012 and analyzed on 08/08/2012, 08/09/2012 and 08/10/2012.

Iron was detected in method blank MB 240-53131/1-A at a level that was above the method detection limit but below the reporting limit. The value should be considered an estimate, and has been flagged "J". If the associated sample reported a result above the MDL and/or RL, the result has been "B" flagged. Refer to the QC report for details.

Antimony and Iron failed the recovery criteria low for the MS and MSD of sample LLI01-63SE-0205-SSXX (240-13670-23) in batch 240-53790.

Samples LLI01-44SE-0006-SSXX (240-13670-1)[5X], LLI01-44SE-0205-SSXX (240-13670-3)[5X], LLI01-44NE-0006-SSXX (240-13670-4)[5X], LLI01-44NW-0006-SSXX (240-13670-7)[100X], LLI01-44NW-0602-SSXX (240-13670-8)[5X], LLI01-44SW-0006-SSXX (240-13670-10)[100X], LLI01-63NW-0006-SSXX (240-13670-18)[5X], LLI01-63SE-0602-SSXX (240-13670-22)[10X], LLI01-63NE-0006-SSXX (240-13670-24)[5X], LLI01-53SE-0006-SSXX (240-13670-37)[5X], LLI01-53SW-0006-SSXX (240-13670-40)[5X], LLI01-53SW-0602-SSXX (240-13670-41)[5X] and LLI01-53SW-0205-SSXX (240-13670-42)[5X] required dilution prior to analysis. The reporting limits have been adjusted accordingly.

Method(s) 6010B: The following sample(s) was diluted due to the nature of the sample matrix: LLI01-63SE-0602-SSXX (240-13670-22). Elevated reporting limits (RLs) are provided.

No other difficulties were encountered during the metals analyses. All other quality control parameters were within the acceptance limits.

REACTIVE CYANIDE

Samples LLI01-44XX-0006-SSWC (240-13670-13) and LLI01-44XX-0602-SSWC (240-13670-14) were analyzed for reactive cyanide in accordance with EPA SW-846 Method 7.3.3. The samples were prepared on 08/02/2012 and analyzed on 08/03/2012.

No difficulties were encountered during the cyanide analyses. All quality control parameters were within the acceptance limits.

REACTIVE SULFIDE

Samples LLI01-44XX-0006-SSWC (240-13670-13) and LLI01-44XX-0602-SSWC (240-13670-14) were analyzed for reactive sulfide in accordance with EPA SW-846 Method 7.3.4. The samples were prepared on 08/02/2012 and analyzed on 08/03/2012.

Sulfide, Reactive was detected in method blank MB 480-74972/2-A at a level exceeding the reporting limit. If the associated sample reported a result above the MDL and/or RL, the result has been "B" flagged. Refer to the QC report for details.

The method blank for batch 75148 contained reactive sulfide above the method detection limit. This target analyte concentration was less than the reporting limit (RL); therefore, re-extraction and/or re-analysis of samples was not performed. LLI01-44XX-0006-SSWC (240-13670-13), LLI01-44XX-0602-SSWC (240-13670-14).

No other difficulties were encountered during the sulfide analyses. All other quality control parameters were within the acceptance limits.

PH

Samples LLI01-44XX-0006-SSWC (240-13670-13) and LLI01-44XX-0602-SSWC (240-13670-14) were analyzed for pH in accordance with EPA SW-846 Method 9045C. The samples were analyzed on 08/02/2012.

No difficulties were encountered during the pH analyses. All quality control parameters were within the acceptance limits.

PERCENT SOLIDS

Samples LLI01-44SE-0006-SSXX (240-13670-1), LLI01-44SE-0602-SSXX (240-13670-2), LLI01-44SE-0205-SSXX (240-13670-3), LLI01-44NE-0006-SSXX (240-13670-4), LLI01-44NE-0602-SSXX (240-13670-5), LLI01-44NE-0205-SSXX (240-13670-6), LLI01-44NW-0006-SSXX (240-13670-7), LLI01-44NW-0602-SSXX (240-13670-8), LLI01-44NW-0205-SSXX (240-13670-9), LLI01-44SW-0006-SSXX (240-13670-10), LLI01-44SW-0602-SSXX (240-13670-11), LLI01-44SW-0205-SSXX (240-13670-12), LLI01-44XX-0006-SSWC (240-13670-13), LLI01-44XX-0602-SSWC (240-13670-14), LLI01-63SW-0006-SSXX (240-13670-15), LLI01-63SW-0602-SSXX (240-13670-16), LLI01-63SW-0205-SSXX (240-13670-17), LLI01-63NW-0006-SSXX (240-13670-18),

The samples were analyzed on 08/01/2012.

No difficulties were encountered during the % solids analyses. All quality control parameters were within the acceptance limits.

2. Were custody seals on the outside of the cooler(s)? If Yes Quantity _____

Yes ☒ No ☒

-Were custody seals on the outside of the cooler(s) signed & dated?

Yes ☐ No ☒ NA

-Were custody seals on the bottle(s)?

Yes ☒ No ☒

3. Shippers' packing slip attached to the cooler(s)?

☒ Yes ☐ No

4. Did custody papers accompany the sample(s)?

☒ Yes ☐ No

5. Were the custody papers relinquished & signed in the appropriate place?

☒ Yes ☐ No

6. Did all bottles arrive in good condition (Unbroken)?

☒ Yes ☐ No

7. Could all bottle labels be reconciled with the COC?

☒ Yes ☐ No

8. Were correct bottle(s) used for the test(s) indicated?

☒ Yes ☐ No

9. Sufficient quantity received to perform indicated analyses?

☒ Yes ☐ No

10. Were sample(s) at the correct pH upon receipt?

Yes ☐ No ☒ NA

11. Were VOAs on the COC?

Yes ☒ No ☒

12. Were air bubbles >6 mm in any VOA vials?

Yes ☐ No ☒ NA

13. Was a trip blank present in the cooler(s)?

Yes ☒ No ☒Contacted PM _____ Date _____ by _____ via Verbal ☐ Voice Mail ☐ Other _____
Concerning _____

14. CHAIN OF CUSTODY & SAMPLE DISCREPANCIES

15. SAMPLE CONDITION

Sample(s) _____ were received after the recommended holding time had expired.

Sample(s) _____ were received in a broken container.

Sample(s) _____ were received with bubble >6 mm in diameter. (Notify PM)

Question	Answer	Comment
Radioactivity either was not measured or, if measured, is at or below background	N/A	
The cooler's custody seal, if present, is intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the sample IDs on the containers and the COC.	True	
Samples are received within Holding Time.	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
VOA sample vials do not have headspace or bubble is <6mm (1/4") in diameter.	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

Definitions/Glossary

Client: AMEC Environment & Infrastructure, Inc.
Project/Site: HW LAKE LINDEN

TestAmerica Job ID: 240-13797-2

Qualifiers

Metals

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
B	Compound was found in the blank and sample.
U	Indicates the analyte was analyzed for but not detected.
H	Sample was prepped or analyzed beyond the specified holding time

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
☼	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CNF	Contains no Free Liquid
DL, RA, RE, IN	Indicates a Dilution, Reanalysis, Re-extraction, or additional Initial metals/anion analysis of the sample
EDL	Estimated Detection Limit
EPA	United States Environmental Protection Agency
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
ND	Not detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RL	Reporting Limit
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

Narrative

CASE NARRATIVE

Client: AMEC Environment & Infrastructure, Inc.

Project: HW LAKE LINDEN

Report Number: 240-13797-2

With the exceptions noted as flags or footnotes, standard analytical protocols were followed in the analysis of the samples and no problems were encountered or anomalies observed. In addition all laboratory quality control samples were within established control limits, with any exceptions noted below. Each sample was analyzed to achieve the lowest possible reporting limit within the constraints of the method. In some cases, due to interference or analytes present at high concentrations, samples were diluted. For diluted samples, the reporting limits are adjusted relative to the dilution required.

TestAmerica North Canton attests to the validity of the laboratory data generated by TestAmerica facilities reported herein. All analyses performed by TestAmerica facilities were done using established laboratory SOPs that incorporate QA/QC procedures described in the application methods. TestAmerica's operations groups have reviewed the data for compliance with the laboratory QA/QC plan, and data have been found to be compliant with laboratory protocols unless otherwise noted below.

The test results in this report meet all NELAP requirements for parameters for which accreditation is required or available. Any exceptions to NELAP requirements are noted in this report. Pursuant to NELAP, this report may not be reproduced, except in full, without the written approval of the laboratory.

Calculations are performed before rounding to avoid round-off errors in calculated results.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

All solid sample results are reported on an "as received" basis unless otherwise indicated by the presence of a % solids value in the method header.

This laboratory report is confidential and is intended for the sole use of TestAmerica and its client.

RECEIPT

The samples were received on 08/03/2012; the samples arrived in good condition and properly preserved. The temperatures of the coolers at receipt were 10.2 and 13.6 C.

TCLP METALS (ICP)

Samples LLI01-BERM-01-SSWC (240-13797-26) and LLI01-BERM-02-SSWC (240-13797-27) were analyzed for TCLP metals (ICP) in accordance with EPA SW-846 Methods 1311/ 6010B. The samples were leached on 08/23/2012, prepared on 08/24/2012 and analyzed on 08/27/2012.

Barium and Selenium were detected in method blank LB 240-55528/1-B at levels that were above the method detection limit but below the reporting limit. The values should be considered estimates, and have been flagged "J". If the associated sample reported a result above the MDL and/or RL, the result has been "B" flagged. Refer to the QC report for details.

Barium was detected in method blank MB 240-55571/2-A at a level that was above the method detection limit but below the reporting limit. The value should be considered an estimate, and has been flagged "J". If the associated sample reported a result above the MDL and/or RL, the result has been "B" flagged. Refer to the QC report for details.

No other difficulties were encountered during the metals analyses. All other quality control parameters were within the acceptance limits.

Case Narrative

Client: AMEC Environment & Infrastructure, Inc.
Project/Site: HW LAKE LINDEN

TestAmerica Job ID: 240-13797-2

Job ID: 240-13797-2 (Continued)

Laboratory: TestAmerica Canton (Continued)

TCLP MERCURY

Samples LLI01-BERM-01-SSWC (240-13797-26) and LLI01-BERM-02-SSWC (240-13797-27) were analyzed for TCLP mercury in accordance with EPA SW-846 Methods 1311/7470A. The samples were leached on 08/23/2012, prepared on 08/24/2012 and analyzed on 08/28/2012.

No difficulties were encountered during the mercury analyses. All quality control parameters were within the acceptance limits.

FLASHPOINT

Samples LLI01-BERM-01-SSWC (240-13797-26) and LLI01-BERM-02-SSWC (240-13797-27) were analyzed for flashpoint in accordance with EPA SW-846 Method 1010. The samples were analyzed on 08/27/2012.

No difficulties were encountered during the flashpoint analyses. All quality control parameters were within the acceptance limits.

PAINT FILTER

Samples LLI01-BERM-01-SSWC (240-13797-26) and LLI01-BERM-02-SSWC (240-13797-27) were analyzed for paint filter in accordance with EPA SW-846 Method 9095A. The samples were analyzed on 08/30/2012.

No difficulties were encountered during the paint filter analyses. All quality control parameters were within the acceptance limits.

Qualifiers

General Chemistry

Qualifier	Qualifier Description
H	Sample was prepped or analyzed beyond the specified holding time
U	Indicates the analyte was analyzed for but not detected.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
☼	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CNF	Contains no Free Liquid
DL, RA, RE, IN	Indicates a Dilution, Reanalysis, Re-extraction, or additional Initial metals/anion analysis of the sample
EDL	Estimated Detection Limit
EPA	United States Environmental Protection Agency
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
ND	Not detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RL	Reporting Limit
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

Narrative

CASE NARRATIVE

Client: AMEC Environment & Infrastructure, Inc.

Project: HW LAKE LINDEN

Report Number: 240-13809-2

With the exceptions noted as flags or footnotes, standard analytical protocols were followed in the analysis of the samples and no problems were encountered or anomalies observed. In addition all laboratory quality control samples were within established control limits, with any exceptions noted below. Each sample was analyzed to achieve the lowest possible reporting limit within the constraints of the method. In some cases, due to interference or analytes present at high concentrations, samples were diluted. For diluted samples, the reporting limits are adjusted relative to the dilution required.

The 9012 Reactive Cyanide and 9034 Reactive Sulfide analysis were performed at the TestAmerica Buffalo Laboratory.

TestAmerica North Canton attests to the validity of the laboratory data generated by TestAmerica facilities reported herein. All analyses performed by TestAmerica facilities were done using established laboratory SOPs that incorporate QA/QC procedures described in the application methods. TestAmerica's operations groups have reviewed the data for compliance with the laboratory QA/QC plan, and data have been found to be compliant with laboratory protocols unless otherwise noted below.

The test results in this report meet all NELAP requirements for parameters for which accreditation is required or available. Any exceptions to NELAP requirements are noted in this report. Pursuant to NELAP, this report may not be reproduced, except in full, without the written approval of the laboratory.

Calculations are performed before rounding to avoid round-off errors in calculated results.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

All solid sample results are reported on an "as received" basis unless otherwise indicated by the presence of a % solids value in the method header.

This laboratory report is confidential and is intended for the sole use of TestAmerica and its client.

RECEIPT

The samples were received on 08/03/2012; the samples arrived in good condition and properly preserved. The temperatures of the coolers at receipt were 10.2 and 13.6 C.

FLASHPOINT

Sample LLI01-BERM-04-SSWC (240-13809-2) was analyzed for flashpoint in accordance with EPA SW-846 Method 1010. The samples were analyzed on 08/27/2012.

No difficulties were encountered during the flashpoint analysis. All quality control parameters were within the acceptance limits.

REACTIVE CYANIDE

Sample LLI01-BERM-04-SSWC (240-13809-2) was analyzed for reactive cyanide in accordance with EPA SW-846 Method 7.3.3. The samples were prepared and analyzed on 08/23/2012.

The following sample was prepared and analyzed outside the method defined holding time because the request for the test was made after the holding time for the sample expired. LLI01-BERM-04-SSWC (240-13809-2).

Case Narrative

Client: AMEC Environment & Infrastructure, Inc.
Project/Site: HW LAKE LINDEN

TestAmerica Job ID: 240-13809-2

Job ID: 240-13809-2 (Continued)

Laboratory: TestAmerica Canton (Continued)

No other difficulties were encountered during the cyanide analysis. All quality control parameters were within the acceptance limits.

REACTIVE SULFIDE

Sample LLI01-BERM-04-SSWC (240-13809-2) was analyzed for reactive sulfide in accordance with EPA SW-846 Method 7.3.4. The samples were prepared on 08/23/2012 and analyzed on 08/24/2012.

The following sample was prepared and analyzed outside the method defined holding time because the request for the test was made after the holding time for the sample had expired. LLI01-BERM-04-SSWC (240-13809-2).

No other difficulties were encountered during the sulfide analysis. All quality control parameters were within the acceptance limits.

PH

Sample LLI01-BERM-04-SSWC (240-13809-2) was analyzed for pH in accordance with EPA SW-846 Method 9045C. The samples were analyzed on 08/22/2012.

The following sample was analyzed outside the method defined holding time because the request for the test was made after the holding time for the sample expired: LLI01-BERM-04-SSWC (240-13809-2).

No other difficulties were encountered during the pH analysis. All quality control parameters were within the acceptance limits.

PAINT FILTER

Sample LLI01-BERM-04-SSWC (240-13809-2) was analyzed for paint filter in accordance with EPA SW-846 Method 9095A. The samples were analyzed on 08/30/2012.

No difficulties were encountered during the paint filter analysis. All quality control parameters were within the acceptance limits.

PERCENT SOLIDS

Sample LLI01-BERM-04-SSWC (240-13809-2) was analyzed for percent solids in accordance with EPA Method 160.3 MOD. The samples were analyzed on 08/06/2012.

No difficulties were encountered during the % solids analysis. All quality control parameters were within the acceptance limits.

Qualifiers

General Chemistry

Qualifier	Qualifier Description
H	Sample was prepped or analyzed beyond the specified holding time
U	Indicates the analyte was analyzed for but not detected.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
☼	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CNF	Contains no Free Liquid
DL, RA, RE, IN	Indicates a Dilution, Reanalysis, Re-extraction, or additional Initial metals/anion analysis of the sample
EDL	Estimated Detection Limit
EPA	United States Environmental Protection Agency
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
ND	Not detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RL	Reporting Limit
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

Narrative

CASE NARRATIVE

Client: AMEC Environment & Infrastructure, Inc.

Project: HW LAKE LINDEN

Report Number: 240-13811-2

With the exceptions noted as flags or footnotes, standard analytical protocols were followed in the analysis of the samples and no problems were encountered or anomalies observed. In addition all laboratory quality control samples were within established control limits, with any exceptions noted below. Each sample was analyzed to achieve the lowest possible reporting limit within the constraints of the method. In some cases, due to interference or analytes present at high concentrations, samples were diluted. For diluted samples, the reporting limits are adjusted relative to the dilution required.

The 9012 Reactive Cyanide and 9034 Reactive Sulfide analysis were performed at the TestAmerica Buffalo Laboratory.

TestAmerica North Canton attests to the validity of the laboratory data generated by TestAmerica facilities reported herein. All analyses performed by TestAmerica facilities were done using established laboratory SOPs that incorporate QA/QC procedures described in the application methods. TestAmerica's operations groups have reviewed the data for compliance with the laboratory QA/QC plan, and data have been found to be compliant with laboratory protocols unless otherwise noted below.

The test results in this report meet all NELAP requirements for parameters for which accreditation is required or available. Any exceptions to NELAP requirements are noted in this report. Pursuant to NELAP, this report may not be reproduced, except in full, without the written approval of the laboratory.

Calculations are performed before rounding to avoid round-off errors in calculated results.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

All solid sample results are reported on an "as received" basis unless otherwise indicated by the presence of a % solids value in the method header.

This laboratory report is confidential and is intended for the sole use of TestAmerica and its client.

RECEIPT

The samples were received on 08/03/2012; the samples arrived in good condition and properly preserved. The temperatures of the coolers at receipt were 10.2 and 13.6 C.

FLASHPOINT

Samples LLI01-BERM-08-SSWC (240-13811-1), LLI01-BERM-09-SSWC (240-13811-2), LLI01-BERM-10-SSWC (240-13811-3), LLI01-BERM-11-SSWC (240-13811-4) and LLI01-BERM-12-SSWC (240-13811-5) were analyzed for flashpoint in accordance with EPA SW-846 Method 1010. The samples were analyzed on 08/27/2012 and 08/29/2012.

No difficulties were encountered during the flashpoint analyses. All quality control parameters were within the acceptance limits.

REACTIVE CYANIDE

Samples LLI01-BERM-08-SSWC (240-13811-1), LLI01-BERM-09-SSWC (240-13811-2), LLI01-BERM-10-SSWC (240-13811-3), LLI01-BERM-11-SSWC (240-13811-4) and LLI01-BERM-12-SSWC (240-13811-5) were analyzed for reactive cyanide in accordance with EPA SW-846 Method 7.3.3. The samples were prepared and analyzed on 08/27/2012.

The following samples were received outside of holding time: LLI01-BERM-08-SSWC (240-13811-1), LLI01-BERM-09-SSWC

Case Narrative

Client: AMEC Environment & Infrastructure, Inc.
Project/Site: HW LAKE LINDEN

TestAmerica Job ID: 240-13811-2

Job ID: 240-13811-2 (Continued)

Laboratory: TestAmerica Canton (Continued)

(240-13811-2), LLI01-BERM-10-SSWC (240-13811-3), LLI01-BERM-11-SSWC (240-13811-4), LLI01-BERM-12-SSWC (240-13811-5).

No other difficulties were encountered during the cyanide analyses. All quality control parameters were within the acceptance limits.

REACTIVE SULFIDE

Samples LLI01-BERM-08-SSWC (240-13811-1), LLI01-BERM-09-SSWC (240-13811-2), LLI01-BERM-10-SSWC (240-13811-3), LLI01-BERM-11-SSWC (240-13811-4) and LLI01-BERM-12-SSWC (240-13811-5) were analyzed for reactive sulfide in accordance with EPA SW-846 Method 7.3.4. The samples were prepared on 08/27/2012 and analyzed on 08/28/2012.

The following samples were received outside of holding time: LLI01-BERM-08-SSWC (240-13811-1), LLI01-BERM-09-SSWC (240-13811-2), LLI01-BERM-10-SSWC (240-13811-3), LLI01-BERM-11-SSWC (240-13811-4), LLI01-BERM-12-SSWC (240-13811-5).

No other difficulties were encountered during the sulfide analyses. All quality control parameters were within the acceptance limits.

PH

Samples LLI01-BERM-08-SSWC (240-13811-1), LLI01-BERM-09-SSWC (240-13811-2), LLI01-BERM-10-SSWC (240-13811-3), LLI01-BERM-11-SSWC (240-13811-4) and LLI01-BERM-12-SSWC (240-13811-5) were analyzed for pH in accordance with EPA SW-846 Method 9045C. The samples were analyzed on 08/24/2012.

The following samples were analyzed outside the method defined holding time because the request for the test was made after the holding time for the sample expired: LLI01-BERM-08-SSWC (240-13811-1), LLI01-BERM-09-SSWC (240-13811-2), LLI01-BERM-10-SSWC (240-13811-3), LLI01-BERM-11-SSWC (240-13811-4), LLI01-BERM-12-SSWC (240-13811-5). The results are reported.

No other difficulties were encountered during the pH analyses. All quality control parameters were within the acceptance limits.

PAINT FILTER

Samples LLI01-BERM-08-SSWC (240-13811-1), LLI01-BERM-09-SSWC (240-13811-2), LLI01-BERM-10-SSWC (240-13811-3), LLI01-BERM-11-SSWC (240-13811-4) and LLI01-BERM-12-SSWC (240-13811-5) were analyzed for paint filter in accordance with EPA SW-846 Method 9095A. The samples were analyzed on 08/30/2012.

No difficulties were encountered during the paint filter analyses. All quality control parameters were within the acceptance limits.

PERCENT SOLIDS

Samples LLI01-BERM-08-SSWC (240-13811-1), LLI01-BERM-09-SSWC (240-13811-2), LLI01-BERM-10-SSWC (240-13811-3), LLI01-BERM-11-SSWC (240-13811-4) and LLI01-BERM-12-SSWC (240-13811-5) were analyzed for percent solids in accordance with EPA Method 160.3 MOD. The samples were analyzed on 08/06/2012.

No difficulties were encountered during the % solids analyses. All quality control parameters were within the acceptance limits.

CASE NARRATIVE REVISED

Client: AMEC Environment & Infrastructure, Inc.

Project: H+C Power Plant, Lake Linden, MI

Report Number: 240-24831-1

Per client request, a Level IV Data Package has been added and reported.

With the exceptions noted as flags or footnotes, standard analytical protocols were followed in the analysis of the samples and no problems were encountered or anomalies observed. In addition all laboratory quality control samples were within established control limits, with any exceptions noted below. Each sample was analyzed to achieve the lowest possible reporting limit within the constraints of the method. In some cases, due to interference or analytes present at high concentrations, samples were diluted. For diluted samples, the reporting limits are adjusted relative to the dilution required.

TestAmerica Canton attests to the validity of the laboratory data generated by TestAmerica facilities reported herein. All analyses performed by TestAmerica facilities were done using established laboratory SOPs that incorporate QA/QC procedures described in the application methods. TestAmerica's operations groups have reviewed the data for compliance with the laboratory QA/QC plan, and data have been found to be compliant with laboratory protocols unless otherwise noted below.

The test results in this report meet all NELAP requirements for parameters for which accreditation is required or available. Any exceptions to NELAP requirements are noted in this report. Pursuant to NELAP, this report may not be reproduced, except in full, without the written approval of the laboratory.

Calculations are performed before rounding to avoid round-off errors in calculated results.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

All solid sample results are reported on an "as received" basis unless otherwise indicated by the presence of a % solids value in the method header.

This laboratory report is confidential and is intended for the sole use of TestAmerica and its client.

RECEIPT

The samples were received on 05/23/2013; the samples arrived in good condition, properly preserved and on ice. The temperature of the cooler at receipt was 4.1 C.

The samples were prepared on 05/24/2013 and analyzed on 05/28/2013, 05/30/2013, 05/31/2013, 06/03/2013 and 06/05/2013.

Iron was detected in method blank MB 240-87268/1-A at a level exceeding the reporting limit. If the associated sample reported a result above the MDL and/or RL, the result has been flagged. Refer to the QC report for details.

Antimony and Iron failed the recovery criteria low for the MS/MSD of sample LLI01-24SW-0005-SSXXMS/MSD (240-24831-17) in batch 240-87566. Copper and Lead failed the recovery criteria high.

Antimony and Copper failed the recovery criteria low for the MS/MSD of sample LLI01-24SW-0205-SSXXMS/MSD (240-24831-19) in batch 240-88585. Iron and Lead failed the recovery criteria high.

Antimony failed the recovery criteria low for the MS/MSD of sample LLI01-70NE-0205-SSXXMS/MSD (240-24831-41) in batch 240-88126. Iron failed the recovery criteria high.

The presence of the '4' qualifier in the data indicates analytes where the concentration in the unspiked sample exceeded four times the spiking amount. Refer to the QC report for details.

Samples LLI01-26NE-0005-SSXX (240-24831-23)[5X], LLI01-26NE-0502-SSXX (240-24831-24)[5X], LLI01-34SE-0502-SSXX (240-24831-27)[2X], LLI01-64NW-0205-SSXX (240-24831-34)[5X], LLI01-DUP4-XXXX-SSXX (240-24831-35)[5X], LLI01-72SW-0005-SSXX (240-24831-36)[5X], LLI01-72SW-0205-SSXX (240-24831-38)[5X], LLI01-70NE-0005-SSXX (240-24831-39)[5X], LLI01-31SW-0005-SSXX (240-24831-49)[5X] and LLI01-31SW-0502-SSXX (240-24831-50)[10X] required dilution prior to analysis. The reporting limits have been adjusted accordingly.

No other difficulties were encountered during the metals analysis. All other quality control parameters were within the acceptance limits.

The samples were analyzed on 05/24/2013.

Percent Moisture exceeded the RPD limit for the duplicate of sample LLI01-23SW-0005-SSXXDU (240-24831-51). Percent Moisture exceeded the RPD limit for the duplicate of sample LLI01-41SW-0205-SSXXDU (240-24831-6). Refer to the QC report for details.

No other difficulties were encountered during the % solids analysis. All other quality control parameters were within the acceptance limits.

DATA REPORTING QUALIFIERS

Client: AMEC Environment & Infrastructure, Inc.

Job Number: 240-24831-1

Lab Section	Qualifier	Description
Metals	B	Compound was found in the blank and sample.
	^	ICV,CCV,ICB,CCB, ISA, ISB, CRI, CRA, DLCK or MRL standard: Instrument related QC exceeds the control limits.
	U	Indicates the analyte was analyzed for but not detected.
	F	MS or MSD exceeds the control limits
	4	MS, MSD: The analyte present in the original sample is 4 times greater than the matrix spike concentration; therefore, control limits are not applicable.
	J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
General Chemistry	F	Duplicate RPD exceeds the control limit
