Re: Quantem ID 210969

Quantem appreciates the opportunity to provide analytical testing services to you. Attached are your reports and other supporting documentation for the above referenced project.

Thank you for making Quantem your lab of choice. If you have any question concerning this or other reports please feel free to contact us at 800-822-1650.

We continually work to improve our service. Help us out by providing feed back on your experience at www.QuanTEM.com. Click on Service Survey and fill out the form. We look forward to hearing from you.

Respectfully,
Quantem Laboratories, LLC.

2033 Heritage Park Drive / Oklahoma City, OK 73120 / (405) 755-7272 / Fax (405) 755-2058

Sandy Baker, Analyst

8/22/2012

Date of Report

Unless otherwise noted, upon receipt the condition of the sample was acceptable for analysis.

Quantem is a NVLAP accredited TEM and PLM laboratory (Lab Code: 101959-0). This report relates only to the specific items tested. NVLAP accreditation applies only to analysis performed utilizing EPA/600/M4-82-020 and EPA/600/R-93/116 methods. This report may not be used to claim product endorsement by NVLAP or any other agency of the US Government. This report may not be reproduced except in full, without the written approval of the laboratory.

Re: Quantem ID 210913

Quantem appreciates the opportunity to provide analytical testing services to you. Attached are your reports and other supporting documentation for the above referenced project.

Thank you for making Quantem your lab of choice. If you have any question concerning this or other reports please feel free to contact us at 800-822-1650.

We continually work to improve our service. Help us out by providing feed back on your experience at www.QuanTEM.com. Click on Service Survey and fill out the form. We look forward to hearing from you.

Respectfully,
Quantem Laboratories, LLC.

2033 Heritage Park Drive / Oklahoma City, OK 73120 / (405) 755-7272 / Fax (405) 755-2058

Polarized Light Microscopy Asbestos Analysis Report

Quantem Lab No. 210913	Client: AMEC NOVI, MI
Account Number: B894	Doug Saigh
Date Received: 07/30/2012	46850 Magellan Drive Ste 190
Received By: Sherrie Leftwich	Novi, Michigan 48377
Date Analyzed: 08/07/2012	Project: Lake Linden C&H Power Plant Site
Analyzed By: Sandy Baker	Project Location: Torch Lake, Michigan (LLI01)
Methodology: CARB 435	Project Number: 3293-11-1440 Task 2300-Revised

Quantem Sample ID	Client Sample ID	Composition	Color / Description	Asbestos (%)	Non-Asbestos Fiber (%)	Non Fibrous
042	40-0205-SSXX	Homogeneous	Brown Soil	Asbestos Present Chrysotile 0.10 Amosite 0.40 1000 Point Count	NA	Sand
043	39-0006-SSXX	Homogeneous	Brown Soil	Asbestos Present Chrysotile 0.40 Amosite 0.20 1000 Point Count	NA	Sand
044	39-0602-SSXX	Homogeneous	Brown Soil	Asbestos Present Chrysotile 0.70 Amosite 0.30 1000 Point Count	NA	Sand
1.00% Total Asbestos						
045	39-0205-SSXX	Homogeneous	Brown Soil	Asbestos Present Chrysotile 0.40 Amosite 0.30 1000 Point Count	NA	Sand

Unless otherwise noted, upon receipt the condition of the sample was acceptable for analysis.

Quantem is a NVLAP accredited TEM and PLM laboratory (Lab Code: 101959-0). This report relates only to the specific items tested. NVLAP accreditation applies only to analysis performed utilizing EPA/600/M4-82-020 and EPA/600/R-93/116 methods. This report may not be used to claim product endorsement by NVLAP or any other agency of the US Government. This report may not be reproduced except in full, without the written approval of the laboratory.

Re: Quantem ID 210968

Quantem appreciates the opportunity to provide analytical testing services to you. Attached are your reports and other supporting documentation for the above referenced project.

Thank you for making Quantem your lab of choice. If you have any question concerning this or other reports please feel free to contact us at 800-822-1650.

We continually work to improve our service. Help us out by providing feed back on your experience at www.QuanTEM.com. Click on Service Survey and fill out the form. We look forward to hearing from you.

Respectfully,
Quantem Laboratories, LLC.

Re: QuantEM ID 210967

QuantEM appreciates the opportunity to provide analytical testing services to you. Attached are your reports and other supporting documentation for the above referenced project.

Thank you for making QuantEM your lab of choice. If you have any question concerning this or other reports please feel free to contact us at 800-822-1650.

We continually work to improve our service. Help us out by providing feed back on your experience at www.QuanTEM.com. Click on Service Survey and fill out the form. We look forward to hearing from you.

Respectfully,
QuantEM Laboratories, LLC.

2033 Heritage Park Drive / Oklahoma City, OK 73120 / (405) 755-7272 / Fax (405) 755-2058

Polarized Light Microscopy Asbestos Analysis Report

Quantem Lab No.	210967	Client:	AMEC NOVI, MI

Re: QuantEM ID 211116

QuantEM appreciates the opportunity to provide analytical testing services to you. Attached are your reports and other supporting documentation for the above referenced project.

Thank you for making QuantEM your lab of choice. If you have any question concerning this or other reports please feel free to contact us at 800-822-1650.

We continually work to improve our service. Help us out by providing feed back on your experience at www.QuanTEM.com. Click on Service Survey and fill out the form. We look forward to hearing from you.

Respectfully,
QuantEM Laboratories, LLC.

Date of Report

Unless otherwise noted, upon receipt the condition of the sample was acceptable for analysis.

Quantem is a NVLAP accredited TEM and PLM laboratory (Lab Code: 101959-0). This report relates only to the specific items tested. NVLAP accreditation applies only to analysis performed utilizing EPA/600/M4-82-020 and EPA/600/R-93/116 methods. This report may not be used to claim product endorsement by NVLAP or any other agency of the US Government. This report may not be reproduced except in full, without the written approval of the laboratory.

Re: Quantem ID 212633

Quantem appreciates the opportunity to provide analytical testing services to you. Attached are your reports and other supporting documentation for the above referenced project.

Thank you for making Quantem your lab of choice. If you have any question concerning this or other reports please feel free to contact us at 800-822-1650.

We continually work to improve our service. Help us out by providing feed back on your experience at www.QuanTEM.com. Click on Service Survey and fill out the form. We look forward to hearing from you.

Respectfully,
Quantem Laboratories, LLC.

2033 Heritage Park Drive / Oklahoma City, OK 73120 / (405) 755-7272 / Fax (405) 755-2058

Transmission Electron Microscopy Asbestos Analysis Report

QuantEM Sample ID: 212633-001
Date Received: September 14, 2012
Received By: Joanna Mueller

Client: AMEC—Novi, MI
Account Number: B894
Client Sample ID: LLI01-07XX-AC01
Sample Volume: 498.75

Analyzed By: L. Armstrong / J. Mlekush

Analytical Method: ISO 10312
Instrument/ Mag.: JEOL 100CXII / 18,150X
Filter Type: 0.45µm 25 mm MCE

Number of Grid Openings: 71
Area Analyzed: 0.781 mm²
Grid Archival: 2181 A1 A2 A3 A4 A5
B1 B2 B3 B4 B5
C1 C2 C3 C4 C5

Analysis Summary

Analytical Sensitivity: 0.001 s/cc
Detection Limit: 0.003 s/cc

Number of primary asbestos structures: 0

Number of asbestos structures counted: 0

Number of asbestos structures >5µm: 0

Number of asbestos fibers & bundles >5µm: 0

Number of PCM equivalent asbestos structures: 0

Number of PCM equivalent asbestos fibers: 0

Total Concentration <0.003 s/cc

A handwritten signature in black ink, appearing to read "J. Mlekush", is written over a horizontal line.

(Reviewed and Approved)

Re: QuantEM ID 212845

QuantEM appreciates the opportunity to provide analytical testing services to you. Attached are your reports and other supporting documentation for the above referenced project.

Thank you for making QuantEM your lab of choice. If you have any question concerning this or other reports please feel free to contact us at 800-822-1650.

We continually work to improve our service. Help us out by providing feed back on your experience at www.QuanTEM.com. Click on Service Survey and fill out the form. We look forward to hearing from you.

Respectfully,
QuantEM Laboratories, LLC.

2033 Heritage Park Drive / Oklahoma City, OK 73120 / (405) 755-7272 / Fax (405) 755-2058

Transmission Electron Microscopy Asbestos Analysis Report

Quantem Sample ID: 212845-001
Date Received: September 19, 2012
Received By: Joanna Mueller

Client: AMEC—Novi, MI
Account Number: B894
Client Sample ID: LLI01-05XX-AC03
Sample Volume: 509

Analyzed By: J. Mlekush

Analytical Method: ISO 10312
Instrument/ Mag.: JEOL 100CXII / 18,150X
Filter Type: 0.45µm 25 mm MCE

Number of Grid Openings: Not Applicable
Area Analyzed: Not Applicable
Grid Archival: **2189** A1 A2 A3 A4 A5
B1 B2 B3 B4 B5
C1 C2 C3 C4

Analysis Summary

Analytical Sensitivity: Not Applicable
Detection Limit: Not Applicable

Number of primary asbestos structures: **

Number of asbestos structures counted: **

Number of asbestos structures >5µm: **

Number of asbestos fibers & bundles >5µm: **

Number of PCM equivalent asbestos structures: **

Number of PCM equivalent asbestos fibers: **

Total Concentration

Not Analyzed. Too Dirty to Count.

Sample contained unacceptably excessive amount of particulate in excess of ISO10312 guidelines.

(Reviewed and Approved)

Re: QuantEM ID 212829

QuantEM appreciates the opportunity to provide analytical testing services to you. Attached are your reports and other supporting documentation for the above referenced project.

Thank you for making QuantEM your lab of choice. If you have any question concerning this or other reports please feel free to contact us at 800-822-1650.

We continually work to improve our service. Help us out by providing feed back on your experience at www.QuanTEM.com. Click on Service Survey and fill out the form. We look forward to hearing from you.

Respectfully,
QuantEM Laboratories, LLC.

Transmission Electron Microscopy Asbestos Analysis Report

Quantem Sample ID: 212847-001
Date Received: September 19, 2012
Received By: Joanna Mueller

Client: AMEC—Novi, MI
Account Number: B894
Client Sample ID: LLI01-08XX-AC01
Sample Volume: 475

Analyzed By: L. Armstrong

Analytical Method: ISO 10312
Instrument/ Mag.: JEOL 100CXII / 18,150X
Filter Type: 0.45 μ m 25 mm MCE

Number of Grid Openings: 74
Area Analyzed: 0.817 mm²
Grid Archival: 2178 D2 D3 D4 D5 E1 E2
E3 E4 E5 A6 A6 A8
A9 A10 B6

Analysis Summary

Analytical Sensitivity: 0.001 s/cc
Detection Limit: 0.003 s/cc

Number of primary asbestos structures: 3

Number of asbestos structures counted: 3

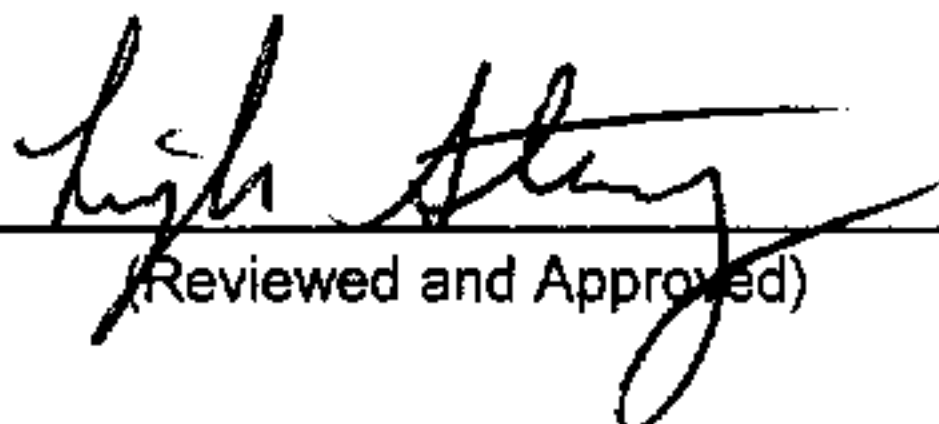

Number of asbestos structures >5 μ m: 0

Number of asbestos fibers & bundles >5 μ m: 0

Number of PCM equivalent asbestos structures: 0

Number of PCM equivalent asbestos fibers: 0

Total Concentration 0.003 s/cc

Re: QuantEM ID 212847

QuantEM appreciates the opportunity to provide analytical testing services to you. Attached are your reports and other supporting documentation for the above referenced project.

Thank you for making QuantEM your lab of choice. If you have any question concerning this or other reports please feel free to contact us at 800-822-1650.

We continually work to improve our service. Help us out by providing feed back on your experience at www.QuanTEM.com. Click on Service Survey and fill out the form. We look forward to hearing from you.

Respectfully,
QuantEM Laboratories, LLC.

2033 Heritage Park Drive / Oklahoma City, OK 73120 / (405) 755-7272 / Fax (405) 755-2058

Transmission Electron Microscopy Asbestos Analysis Report

QuanTEM Sample ID: 212847-001
Date Received: September 19, 2012
Received By: Joanna Mueller

Client: AMEC—Novi, MI
Account Number: B894
Client Sample ID: LLI01-15XX-AC02
Sample Volume: 533

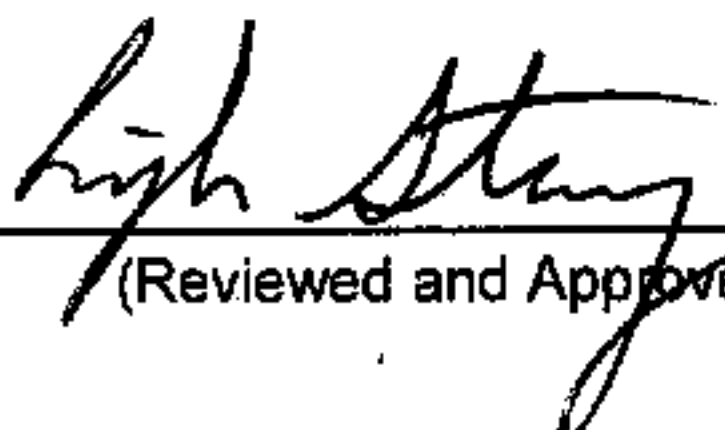

Analyzed By: L. Armstrong

Analytical Method: ISO 10312
Instrument/ Mag.: JEOL 100CXII / 18,150X
Filter Type: 0.45µm 25 mm MCE

Number of Grid Openings: 66
Area Analyzed: 0.726 mm²
Grid Archival: **2186** A1 A2 A3 A4 A5 B1 B2
B3 B4 B5 C1 C2 C3 C4

Analysis Summary

Analytical Sensitivity:	0.001 s/cc
Detection Limit:	0.003 s/cc
Number of primary asbestos structures:	0
Number of asbestos structures counted:	0
Number of asbestos structures >5µm:	0
Number of asbestos fibers & bundles >5µm:	0
Number of PCM equivalent asbestos structures:	0
Number of PCM equivalent asbestos fibers:	0
Total Concentration	<0.003 s/cc

Re: Quantem ID 213324

Quantem appreciates the opportunity to provide analytical testing services to you. Attached are your reports and other supporting documentation for the above referenced project.

Thank you for making Quantem your lab of choice. If you have any question concerning this or other reports please feel free to contact us at 800-822-1650.

We continually work to improve our service. Help us out by providing feed back on your experience at www.QuanTEM.com. Click on Service Survey and fill out the form. We look forward to hearing from you.

Respectfully,
Quantem Laboratories, LLC.

2033 Heritage Park Drive / Oklahoma City, OK 73120 / (405) 755-7272 / Fax (405) 755-2058

Transmission Electron Microscopy Asbestos Analysis Report

QuantEM Sample ID: 213324-001

Date Received: October 2, 2012

Received By: Joanna Mueller

Analyzed By: L. Armstrong

Analytical Method: ISO 10312

Instrument/ Mag.: JEOL 100CXII / 18,150X

Filter Type: 0.45µm 25 mm MCE

Client: AMEC—Novi, MI

Account Number: B894

Client Sample ID: LLI01-06XX-AC01

Sample Volume: 550 (Revised)

Number of Grid Openings: 64

Area Analyzed: 0.704 mm²

Re: Quantem ID 213371

Quantem appreciates the opportunity to provide analytical testing services to you. Attached are your reports and other supporting documentation for the above referenced project.

Thank you for making Quantem your lab of choice. If you have any question concerning this or other reports please feel free to contact us at 800-822-1650.

We continually work to improve our service. Help us out by providing feed back on your experience at www.QuanTEM.com. Click on Service Survey and fill out the form. We look forward to hearing from you.

Respectfully,
Quantem Laboratories, LLC.

2033 Heritage Park Drive / Oklahoma City, OK 73120 / (405) 755-7272 / Fax (405) 755-2058

Transmission Electron Microscopy Asbestos Analysis Report

QuantEM Sample ID: 213371-001
Date Received: October 3, 2012
Received By: Joanna Mueller

Client: AMEC—Novi, MI
Account Number: B894
Client Sample ID: LLI01-44XX-AC01
Sample Volume: 478

Analyzed By: L. Armstrong

Analytical Method: ISO 10312
Instrument/ Mag.: JEOL 100CXII / 18,150X
Filter Type: 0.45µm 25 mm MCE

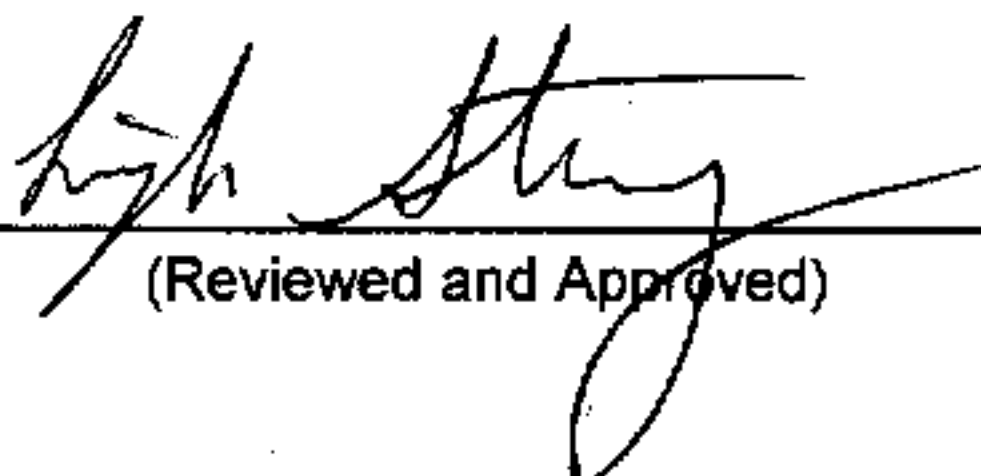

Number of Grid Openings: 74
Area Analyzed: 0.814mm²
Grid Archival: 2196 B9 B10 C6 C7 C8 C9
C10 D6 D7 D8 D9 D10
E6 E7 E8

Analysis Summary

Analytical Sensitivity: 0.001 s/cc
Detection Limit: 0.003 s/cc

Number of primary asbestos structures: 5
Number of asbestos structures counted: 5
Number of asbestos structures >5µm: 2
Number of asbestos fibers & bundles >5µm: 1
Number of PCM equivalent asbestos structures: 0
Number of PCM equivalent asbestos fibers: 0

Total Concentration 0.005 s/cc

Re: Quantem ID 213460

Quantem appreciates the opportunity to provide analytical testing services to you. Attached are your reports and other supporting documentation for the above referenced project.

Thank you for making Quantem your lab of choice. If you have any question concerning this or other reports please feel free to contact us at 800-822-1650.

We continually work to improve our service. Help us out by providing feed back on your experience at www.QuanTEM.com. Click on Service Survey and fill out the form. We look forward to hearing from you.

Respectfully,
Quantem Laboratories, LLC.

Re: Quantem ID 222676

Quantem appreciates the opportunity to provide analytical testing services to you. Attached are your reports and other supporting documentation for the above referenced project.

Thank you for making Quantem your lab of choice. If you have any question concerning this or other reports please feel free to contact us at 800-822-1650.

We continually work to improve our service. Help us out by providing feed back on your experience at www.QuanTEM.com. Click on Service Survey and fill out the form. We look forward to hearing from you.

Respectfully,
Quantem Laboratories, LLC.

Re: QuantEM ID 235862

QuantEM appreciates the opportunity to provide analytical testing services to you. Attached are your reports and other supporting documentation for the above referenced project.

Thank you for making QuantEM your lab of choice. If you have any question concerning this or other reports please feel free to contact us at 800-822-1650.

We continually work to improve our service. Help us out by providing feed back on your experience at www.QuanTEM.com. Click on Service Survey and fill out the form. We look forward to hearing from you.

Respectfully,
QuantEM Laboratories, LLC.

Qualifiers

Metals

Qualifier	Qualifier Description
U	Indicates the analyte was analyzed for but not detected.
F1	MS and/or MSD Recovery exceeds the control limits

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
α	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CNF	Contains no Free Liquid
DER	Duplicate error ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision level concentration
MDA	Minimum detectable activity
EDL	Estimated Detection Limit
MDC	Minimum detectable concentration
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
NC	Not Calculated
ND	Not detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative error ratio
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

Narrative

CASE NARRATIVE

Client: AMEC Environment & Infrastructure, Inc.

Project: Honeywell Lake Linden, MI

Report Number: 240-37798-1

Revision 1

This report was revised on 6/9/14 so the sample IDs could be corrected per the client's revised Chain of Custody sent on 6/9/14. The revised Chain of Custody is included at the end of the report.

With the exceptions noted as flags or footnotes, standard analytical protocols were followed in the analysis of the samples and no problems were encountered or anomalies observed. In addition all laboratory quality control samples were within established control limits, with any exceptions noted below. Each sample was analyzed to achieve the lowest possible reporting limit within the constraints of the method. In some cases, due to interference or analytes present at high concentrations, samples were diluted. For diluted samples, the reporting limits are adjusted relative to the dilution required.

TestAmerica Canton attests to the validity of the laboratory data generated by TestAmerica facilities reported herein. All analyses performed by TestAmerica facilities were done using established laboratory SOPs that incorporate QA/QC procedures described in the application methods. TestAmerica's operations groups have reviewed the data for compliance with the laboratory QA/QC plan, and data have been found to be compliant with laboratory protocols unless otherwise noted below.

The test results in this report meet all NELAP requirements for parameters for which accreditation is required or available. Any exceptions to NELAP requirements are noted in this report. Pursuant to NELAP, this report may not be reproduced, except in full, without the written approval of the laboratory.

Calculations are performed before rounding to avoid round-off errors in calculated results.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

All solid sample results are reported on an "as received" basis unless otherwise indicated by the presence of a % solids value in the method header.

This laboratory report is confidential and is intended for the sole use of TestAmerica and its client.

RECEIPT

The samples were received on 5/28/2014 10:00 AM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperatures of the 6 coolers at receipt time were 5.2° C, 5.2° C, 5.2° C, 5.4° C, 5.4° C and 5.4° C.

The samples were prepared on 05/29/2014 and 05/30/2014 and analyzed on 05/30/2014, 06/02/2014 and 06/03/2014.

Lead failed the recovery criteria low for the MS/MSD of sample LLI01-66SE-0502-SSXXMS/MSD (240-37801-12) in batch 240-133059.

The following samples required dilution prior to analysis: LLI01-27SE-0005-SSXX (240-37798-1)[10X], LLI01-27SE-0502-SSXX (240-37798-2)[10X], LLI01-31SW-0502-SSXX (240-37798-2)[5X], LLI01-20SE-0005-SSXX (240-37798-3)[10X], LLI01-20SE-0502-SSXX (240-37798-4)[10X], LLI01-19SE-0005-SSXX (240-37798-5)[10X], LLI01-39SW-0005-SSXX (240-37798-5)[5X], LLI01-19SE-0502-SSXX (240-37798-6)[10X], LLI01-39NE-0502-SSXX (240-37798-8)[5X], LLI01-01NE-0005-SSXX (240-37798-9)[5X], LLI01-26SW-0005-SSXX (240-37798-10)[10X], LLI01-01NE-0502-SSXX (240-37798-10)[5X], LLI01-45SW-0005-SSXX (240-37798-13)[10X], LLI01-45SW-0502-SSXX (240-37798-14)[10X], LLI01-45NW-0005-SSXX (240-37798-15)[10X], LLI01-34NE-0502-SSXX (240-37798-17)[5X], LLI01-44NW-0005-SSXX (240-37798-17)[50X], LLI01-64NW-0005-SSXX (240-37798-18)[2X], LLI01-44NW-0502-SSXX (240-37798-18)[2X], LLI01-44SW-0005-SSXX (240-37798-19)[10X], LLI01-36NE-0005-SSXX (240-37798-23)[10X], LLI01-36NE-0502-SSXX (240-37798-24)[5X], LLI01-36NW-0005-SSXX (240-37798-25)[5X], LLI01-36NW-0502-SSXX (240-37798-26)[10X], LLI01-35NE-0005-SSXX (240-37798-27)[10X], LLI01-35NW-0005-SSXX (240-37798-29)[5X] and LLI01-35NW-0502-SSXX (240-37798-30)[5X]. The reporting limits have been adjusted accordingly.

The following sample was diluted due to the nature of the sample matrix: LLI01-01NE-0502-SSXX (240-37798-10). Elevated reporting limits (RLs) are provided.

No other difficulties were encountered during the metals analysis. All other quality control parameters were within the acceptance limits.

APPENDIX B

Foundation Cleaning Site Walk Meeting Minutes

C&H Power Plant Site
Lake Linden, MI
Foundation Cleaning Site Walk Meeting Minutes
July 10, 2013

Attendees: Mike McGowan – AMEC
Liz Stieber – AMEC
Kurt Cunningham – AMEC
Andy Maguire – EPA
Amy Keranen – MDEQ
Dan Liebau – Weston
Christine Tufts – Weston
Tony Evans – Brandenburg

- All visible ACM will be removed
- Trees/concrete debris can be left onsite
 - Any contaminated concrete debris can be cleaned and left onsite
 - AMEC will discuss with the property owner about leaving the trees onsite and whether they can be left in piles or if they should be cut in smaller pieces or chipped
- Vertical walls of the concrete foundations/structures do not need to be cleaned
- The aboveground and belowground structures will not be entered to remove soil/debris
- Soil/debris will be removed from all trenches/pits < 2 ft deep
- Soil/debris will not be removed from the large pits/rock bins (> 2 ft deep)
 - Visible ACM will be removed prior to backfill
 - Soil cover will consist of demarcation fabric and a minimum of 2 ft of clean fill
 - Existing soil/debris may be repositioned within the trench/pit/rock bin to allow level placement of the demarcation fabric and the 2 ft soil cover
 - Soil/debris will not be transferred from one pit/rock bin to another
 - Additional fill (> 2 ft) may be placed in some areas to match the elevation of adjacent 2 ft cover in order to minimize the potential erosion
- Trees in the large pits/rock bins do not need to be removed but may be removed if it is easier to place the demarcation fabric
- If a trench is 2-5 ft deep with minimal debris at the bottom, Weston/AMEC field representatives will make a decision as to whether the debris will be removed or a soil cover will be placed on top.
- AMEC field representatives will mark a line a safe distance from the edge of the steep embankments (a minimum of 6 ft away) where the 2 ft excavation will stop with EPA/Weston agreement. AMEC will collect soil verification sidewall samples of the undisturbed soil adjacent to the steep embankment. Assuming the length is approximately 280 ft and the depth is 2 ft the sidewall of the excavation would be 560 ft². According to the 2002 MDEQ "Sampling Strategies and Statistic Training Materials for Part 201 Cleanup Criteria" this would require 5 sidewall verification samples. The verification samples will be biased toward any stained soil or evidence of contamination encountered; otherwise the samples will be collected approximately every 70 ft. In addition, a total of 4 additional samples will be collected from the sidewall adjacent to, and soil underneath, the copper concentrate bags. All samples will be collected 1 ft below ground surface and analyzed for antimony, arsenic, copper, iron, and lead.
- All debris piles within contaminated areas will be removed.

- Workers will keep a minimum of 6 ft away from the SE edge of the stamp mill foundation that is collapsing into Torch Lake during foundation cleaning activities.
- The former pump house will be cleaned to the extent possible and the brick debris alongside the structure will be removed. Soil/Debris inside the structure will be removed to a depth which would allow the placement of a 2 ft soil cover that would match the surrounding grade. Demarcation fabric will be placed prior to backfill.
- Brace or shore certain locations, as necessary, to prevent migration of backfill into the subsurface structures

Subject: C&H Site - Foundation Cleaning Workplan Approval

All,

EPA has completed its review of the *C&H Power Plant Site Foundation Cleaning Site Walk Meeting Minutes July 10, 2013* as revised on 8/23/13. EPA approves this plan and any deviation from the plan should be done in consultation with EPA. Also, EPA fully expects for this work to begin as soon as possible so that this work can be completed in during the current mobilization.

If you have any questions, please feel free to contact me at 312-882-4297.

Thanks,

Jacob Hassan
OSC Region 5

Subject: RE: C&H Site - Foundation Cleaning

Hello Andy,

I've added a biased sampling approach for the sidewall along the shore, and additional sampling by the copper concentrate bags. Let me know if you have additional comments.

Thanks,

Michael J. McGowan

Mike,

Thanks for incorporating all of the comments. The sampling strategy seems acceptable but since we're sampling to document contamination left in place, it would be more appropriate to take a biased sampling approach. Dividing the wall into 70 ft intervals is acceptable however biasing the sample location within the intervals where there is likely to be contamination (ie. staining, soil beneath the copper concentrate bags, etc.) and documenting as such would be more appropriate than a straight interval approach. These are all discrete samples being analyzed for metals I assume?

Once we get this sampling approach acceptable, I can approve the Foundation Cleaning Plan.

Mike,

With regards to approving the foundation cleaning, I sent this message last week. Have you incorporated the comments and addition into the plan? If so, after we take a look at the final version including a sampling plan for the embankments, I think we can approve the foundation cleaning plan.

Andy Maguire
U.S. EPA - Region 5

Subject: RE: C&H Site - Foundation Cleaning

Mike,

Attached is a version of the notes with EPA comments/changes(tracked). They are very minor with just one addition.

With the comments/additions and we agree to a sample plan for the steep embankments the foundation cleaning plan should be good.

Thanks!

Andy Maguire
U.S. EPA - Region 5

APPENDIX C

Standard Operating Procedure – Underground Utility Corridors

Background

Seven underground utility corridors have been discovered during site activities located approximately one to two feet below grade. The corridors vary in size and are constructed of brick or concrete and typically extend from one building foundation to another. Some corridors contain piping of various sizes that may have been used as water, steam or electrical conduits. The approximate locations of the utility corridors are shown on Figure 3.4 of the Soil Assessment Summary and Soil Removal Plan. The locations shown on the figure are based on field observations and historical Site maps.

Construction Activities

All entrances to the utility corridors are below grade. There is the potential of breaking through known and unknown utility corridors during construction activities. Every effort will be made during site construction activities to prevent the opening of a utility corridor. Precautions may include limiting travel of heavy machinery over known utility corridors and/or placement of metal sheeting over areas of known utility corridors where heavy machinery is expected to travel. All known utility corridors will be properly marked and all openings flagged to warn Site workers.

Utility corridor breakthroughs will be addressed in the following steps:

Step 1: The utility corridor will be inspected to determine the orientation of the corridor. The known entrances will be blocked (metal sheeting, plywood, or other approved materials), then backfilled to prevent access.

Step 2: Based on the orientation of the corridor an attempt will be made to determine the length of the corridor.

Step 3: In areas where the utility corridor breakthrough openings are less than 3 ft by 3 ft, the soil will be peeled back and a barrier (metal sheeting, plywood, or other approved materials) will be placed over the opening and approximately 2 ft of fill will be placed over it. If a large opening does not facilitate the placement of a barrier over the top, the opening in the utility corridor will be backfilled to grade. Metal sheeting will temporarily be placed over the backfill during the remainder of construction activities.

Step 4: The point of the break-through of the corridor and the ends of the corridor (if known) will be recorded using a handheld GPS unit and placed on project drawings.

When determining how to address utility corridors the following assumptions/practices will be used:

- Utility corridors will not be opened up to remove any soil/debris or to facilitate backfill.
- Potential asbestos containing materials visually identified within a utility corridor will not be sampled, analyzed, or abated. However, coordinates will be obtained by a handheld GPS and locations will be shown on project record drawings.
- Utility corridors are not considered foundations and will not be “cleaned” prior to backfill.
