

April 20, 2015

Mr. Kevin Eichinger  
On-Scene Coordinator (OSC)  
U.S. Environmental Protection Agency (EPA), Region 4  
61 Forsyth Street, SW, 11th Floor  
Atlanta, Georgia 30303

**Subject:       Emergency Response Letter Report  
                  Sycamore Point Mercury  
                  Woodstock, Cherokee County, Georgia  
                  Contract Number (No.) EP-S4-14-03  
                  TDD No. TT-01-017**

Dear Mr. Eichinger:

The Tetra Tech, Inc. Superfund Technical Assessment and Response Team (Tetra Tech START) is submitting this emergency response (ER) letter report summarizing activities conducted from February 18, 2015 through March 20, 2015 at the Sycamore Point Mercury response in Cherokee County, Georgia. This report includes five enclosures. Enclosure 1 contains three figures illustrating the site locations, the site layout, and screening locations at 624 Apache Trail. Enclosure 2 contains the photographic log. Enclosure 3 contains tables that summarize the personal items disposed from each property. Enclosure 4 contains tables that summarize the clearance test results for each property, as well as the screening results for Ace Academy. Enclosure 5 contains the logbook notes.

## **SITE BACKGROUND**

Sometime in early February 2015, three adolescents (a female adolescent and male adolescent #1 and #2) reportedly discovered multiple containers of free elemental mercury in the basement of a residence owned by the grandparents of male adolescent #1; the residence was located at 624 Apache Trail in Woodstock, Georgia. According to available information, the adolescents played with the mercury and caused a release of the mercury inside the house and outside, throughout the property. The adolescents later went to school, where a teacher observed mercury in the hair of the female adolescent, and reported the incident to school officials. Several days after being notified by the school, the girl's parents took her to the emergency room, where her blood was drawn for testing of mercury concentrations. Results reportedly indicated the presence of mercury at concentrations exceeding health-based concentrations. Subsequently, doctors notified the Georgia Environmental Protection Division (GA EPD) and an incident report was filed with the National Response Center.

The U.S. Environmental Protection Agency (EPA) mobilized On-Scene Coordinator (OSC) Stephen Ball to the incident on February 18, 2015. Available information indicated that the mercury was contained in two separate containers approximately 64 ounces each in size and were stored in the house on Apache Trail. The actual amount of mercury in the containers prior to the spill is unknown.

## EMERGENCY RESPONSE ACTIVITIES

On February 18, 2015, OSC Ball mobilized to the incident along with Tetra Tech START to begin assessing the situation and obtaining access agreements for various properties that may have been impacted. The list below summarizes the properties involved (see Figure 1 in Enclosure 1):

- 2008 Longwood Drive, Woodstock, Georgia (grandmother of the female adolescent)
- 525 Sycamore Point, Woodstock, Georgia (residence of the female adolescent)
- 624 Apache Trail, Woodstock, Georgia (source house)
- 611 Apache Trail, Woodstock, Georgia (residence of male adolescent #2)
- 510 Cove Road, Canton, Georgia (residence of male adolescent #1; grandson of the source house owners)
- 8871 Knox Bridge Highway, Canton, Georgia (Ace Academy, school attended by the female adolescent and male adolescent #2)

OSC Ball experienced difficulties in obtaining access to potentially impacted properties from the beginning of the project. As a result, OSC Ball sought the support and assistance of various agencies and organizations to successfully gain access to each property, including GA EPD, the Georgia Department of Public Health, and the Cherokee County School District. The following subsections provide a summary of emergency response and removal activities conducted at each of these locations.

### 2008 Longwood Drive

On February 18, 2015, OSC Ball and Tetra Tech START met with the property owner at 2008 Longwood Drive, who is also the grandmother of the female adolescent involved in the spill of mercury at the source house (624 Apache Trail). Tetra Tech START screened the residence using a Lumex 915+ RA Mercury Vapor Analyzer (Lumex), which indicated no mercury vapor concentrations above EPA action levels.

### 525 Sycamore Point

On February 18, 2015, OSC Ball and Tetra Tech START met with the residents at 525 Sycamore Point, including the female adolescent involved in the original spill of mercury at the source house. Screening of the residence using a Lumex indicated mercury vapor concentrations that ranged from 10,000 to 15,000 nanograms per cubic meter ( $\text{ng}/\text{m}^3$ ) throughout most of the house and concentrations greater than 50,000  $\text{ng}/\text{m}^3$  identified in the female adolescent's bedroom, as well as in the washing machine located upstairs. In addition, the clothes of the male adolescent #2, who was present at 525 Sycamore Point during the screening, indicated concentrations greater than 50,000  $\text{ng}/\text{m}^3$ .

Based on the screening results and discussions with the property owner and residents of the house, OSC Ball initiated a removal action at 525 Sycamore Point on Friday, February 20, 2015. Cleanup activities at this residence from February 20 through February 21 included:

- Removal of personal items and furniture from the female adolescent's bedroom; personal items were heated and vented in a tent constructed outside the house in an attempt to reduce mercury vapor concentrations. Wherever possible, items were returned to the owner when concentrations were reduced below EPA action levels.
- Removal of carpet from the female adolescent's bedroom and bathroom, as well as the adjacent upstairs hallway.

- Removal of the washing machine from the upstairs laundry room; in addition, the floor of the laundry room was scrubbed with Hg CS-102<sup>®</sup> solution and subsequently dried.
- Heating and venting of the female adolescent's bedroom in an attempt to reduce mercury vapor concentrations.

Clearance testing for the residence was conducted on Sunday, February 21, 2015. Based on Lumex screening conducted hourly from 1200 hours through 1600 hours, the residence was cleared for re-occupation. Personal items that could not be successfully heated and vented were inventoried and disposed in a roll-off container for offsite transportation and disposal, while those items that could be successfully treated were returned to the owners. Enclosure 3 provides a summary of the personal items disposed from this property. Enclosure 4 provides a table summarizing the results of clearance testing.

### 624 Apache Trail (Source House)

On February 22, 2015, OSC Ball and Tetra Tech START met with the property owners and residents at 624 Apache Trail. During the meeting, visible beads of elemental mercury were observed along the roadside of Apache Trail in front of the house, as well as on the driveway leading up to house and in the soil in the front yard. Screening of the residence using a Jerome<sup>®</sup> 431 Mercury Vapor Analyzer (Jerome) indicated mercury vapor concentrations that exceeded the instrument's high limit of 0.999 milligrams per cubic meter (mg/m<sup>3</sup>) at the front entrance to the kitchen on the upper level.

Based on the screening results and discussions with the property owner, OSC Ball initiated a removal action at 624 Apache Trail on the evening of Sunday, February 22, 2015, and mobilized Emergency and Rapid Response Services (ERRS) personnel to the residence to begin recovering visible beads of elemental mercury from areas along Apache Trail and outside the house. Cleanup activities were performed at this property from February 22 through March 20, and included:

#### **Paved Surfaces:**

- Testing of an innovative technology for the removal of mercury beads from paved surfaces using DeconGel<sup>®</sup>, which was applied to sections of the Apache Trail road surface and the driveway leading to the house; attempts made using DeconGel<sup>®</sup> during removal activities at this property were not successful.
- Use of mercury vacuums and wet/dry shop vacuums in combination with HgX<sup>®</sup> Mercury Decontaminant Powder (HgX) to clean up exterior paved surfaces impacted with mercury, including portions of the Apache Trail road surface and the driveway leading to the house.
- Use of zinc amalgamation powder and vacuums on portions of the Apache Trail road surface to assist in the removal of mercury beads.
- Application of Kilz<sup>®</sup> paint to portions of the driveway adjacent to the house to act as an encapsulant and provide a temporary work surface for the staging and screening of items removed from the house.
- Removal of approximately 2,000 square feet of concrete from portions of the driveway adjacent to the house, where visible beads of elemental mercury were observed. New concrete was poured in this area upon completion of other removal activities, including transportation and disposal.

### Residential Cleanup Activities:

- Removal of personal items and furniture from the entire house; personal items were heated and vented in tents constructed outside the house in an attempt to reduce mercury vapor concentrations. Whenever possible, items were returned to the owner when concentrations were reduced below EPA action levels.
- Removal of floor and ceiling tiles from the bottom level of the house, as well as the application of a floor-leveling compound and epoxy paint on the remaining floors and walls in an attempt to seal them and prevent further release of mercury vapor concentrations. In addition, small sections of stud-framed walls were removed from the western side of the bottom level of the house to facilitate the removal of large accumulations of elemental mercury discovered there.
- Numerous cycles of washing and vacuuming the floors with HgX solution, followed by the application and removal of Hg CS-102 solution. In addition, sulfur powder was spread over impacted areas and subsequently removed using a mercury vacuum.
- Use of negative air machines on the bottom level to remove air from the residence and reduce mercury vapor concentrations. In addition, torpedo heaters and commercial fans were used to heat and vent the house in combination with the negative air machines to reduce mercury vapor concentrations.
- Removal of the washing machine and dryer from the upstairs laundry room.
- Treatment of the exterior deck area with mercury decontamination solution, as well as the removal of stair treads and risers where visible beads of elemental mercury were observed.
- Installation of a commercial exhaust fan in a window on the bottom level of the residence for permanent future use to assist in clearing mercury vapors from the residence.
- Restoration of exterior areas where removal activities were performed, including the placement of stone and/or backfill in areas where minor excavation was performed, such as adjacent to the house and beneath the deck.

### Soil Cleanup Activities:

- Excavation and disposal of soil from areas around the residence and along the driveway and Apache Trail road surface, where visible beads of elemental mercury were observed. Methods of removal included the use of shovels, syringes, and eye droppers, as well as the use of a trackhoe to scrape impacted areas.
- Lumex screening of headspace in composite soil samples collected from areas of the property to measure mercury vapor concentrations; areas indicating concentrations exceeding 6,000 ng/m<sup>3</sup> were targeted for additional excavation or removal activities. The table below briefly summarizes the screening results (see also Figure 3 in Enclosure 1):

Screening Area	Pre-Excavation Screening Result (ng/m <sup>3</sup> )	Post-Excavation Screening Result (ng/m <sup>3</sup> )
S-01	1,690	No excavation necessary
S-02	800	No excavation necessary
S-03	1,250	No excavation necessary
S-04	3,600	No excavation necessary
S-05	Beads observed	3,500
S-06	3,700	No excavation necessary
S-07	Beads observed	4,000

Screening Area	Pre-Excavation Screening Result (ng/m <sup>3</sup> )	Post-Excavation Screening Result (ng/m <sup>3</sup> )
S-08	Beads observed	5,000
S-09	3,200	No excavation necessary
S-10	4,000	No excavation necessary
S-11	8,000	2,200
S-12	4,800	No excavation necessary
S-13	3,600	No excavation necessary
S-14	5,000	No excavation necessary
S-15	4,000	No excavation necessary
S-16	1,900	No excavation necessary
S-17	8,000	1,400
S-18	1,350	No excavation necessary
S-19	Beads observed	1,900
S-20	Beads observed	5,000
S-21	800	No excavation necessary
S-22	1,000	No excavation necessary

- Discovery and removal of three mason jars containing a total of approximately 48 ounces of elemental mercury from a buried location in the backyard of the property; the location was eventually revealed to EPA by the male adolescent #2 involved in the original spill. In addition, minor amounts of soil were removed from this location to address small quantities of mercury beads observed there.

During the removal action, a total of approximately 75 fluid ounces of elemental mercury were recovered through cleanup efforts, including the three mason jars (approximately 48 fluid ounces total) recovered from the area in backyard of the property. While this amount does not equate to the 128 ounces reported by the property owner, it also does not account for the visible quantities of elemental mercury that were removed during soil cleanup and other site activities, where it was not feasible to recover the individual beads of elemental mercury.

Clearance testing for the residence was conducted on Sunday, March 15, 2015. Based on Lumex screening conducted hourly from 0930 hours through 1330 hours, the residence was cleared for re-occupation. Personal items that could not be successfully heated and vented were inventoried and disposed in a roll-off container for offsite transportation and disposal, while those items that could be successfully treated were returned to the owners. Enclosure 3 provides a summary of the personal items disposed from this property. Enclosure 4 provides a table summarizing the results of clearance testing.

## 611 Apache Trail

On February 24, 2015, OSC Ball and Tetra Tech START met with the property owner at 611 Apache Trail, where male adolescent #2 resides. Prior to arrival, the property owner indicated that he had already performed some cleanup efforts on his own, including the removal of furniture and carpeting from affected areas, as well as the washing machine and various clothing previously used by male adolescent #2. The property owner staged the removed carpet in a small trailer outside the house and other personal items were staged on the back deck of the house.

Screening of the residence, using a Lumex, indicated mercury vapor concentrations that averaged approximately 1,000 ng/m<sup>3</sup> throughout most of the house; the male adolescent #2's bedroom, where carpet had not yet been removed, indicated concentrations of approximately 2,000 ng/m<sup>3</sup>. Screening of the carpeting staged outside in a trailer, as well as the other personal items and washing machine staged on the back deck indicated much higher concentrations, most of which exceeded 50,000 ng/m<sup>3</sup>. Based on the screening results, OSC Ball recommended that the property owner remove the remaining carpet from the male adolescent #2's bedroom, and continue to heat and vent the house for another week. OSC Ball also recommended that the property owner properly dispose of all the removed carpet and contaminated personal items. The property owner agreed to the recommendations.

### 510 Cove Road

On February 25, 2015, OSC Ball and Tetra Tech START met with the residents at 510 Cove Road, including male adolescent #1. Screening of the residence using a Lumex indicated mercury vapor concentrations that ranged from 20,000 to 40,000 ng/m<sup>3</sup>, with the highest readings obtained in male adolescent #1's bedroom.

Based on the screening results and discussions with the residents of the house, OSC Ball initiated a removal action at 510 Cove Road on Monday, March 2, 2015. Cleanup activities were performed at this residence from March 2 through March 4, and included:

- Removal of personal items and furniture from male adolescent #1's bedroom; personal items were heated and vented in a tent constructed outside the house in an attempt to reduce mercury vapor concentrations. Whenever possible, items were returned to the owner when concentrations were reduced below EPA action levels.
- Removal of carpet from male adolescent #1's bedroom, as well as the adjacent hallway and stairs.
- Removal of carpet, as well as some furniture and personal items, from the basement apartment.

Clearance testing for the residence was conducted on Wednesday, March 4, 2015. Based on Lumex screening conducted hourly from 1500 hours through 1900 hours, the residence was cleared for re-occupation. Personal items that could not be successfully heated and vented were inventoried and disposed in a roll-off container for offsite transportation and disposal, while those items that could be successfully treated were returned to the owners. Enclosure 3 provides a summary of the personal items disposed from this property. Enclosure 4 provides a table summarizing the results of clearance testing.

### 8871 Knox Bridge Highway (Ace Academy)

On February 20, 2015, OSC Ball and Tetra Tech START met with representatives from the GA EPD, the Georgia Department of Public Health, and the Cherokee County School District Supervisor of Maintenance at Ace Academy, where the female adolescent and male adolescent #2 attended school. OSC Ball was provided with a list of the classrooms, and Lumex screening for mercury vapor concentrations was conducted in each of them, along with the cafeteria, principal's office, bathrooms, and janitorial closets, as well as the lockers used by the female adolescent and male adolescent #2. Screening results, which are summarized in Enclosure 4, indicated no mercury vapor concentrations above EPA action levels.

## COMMUNITY INVOLVEMENT ACTIVITIES

Due to the large quantity of elemental mercury observed at the source house property (624 Apache Trail) and the potential for impacts at nearby properties, OSC Ball consistently worked with local residents to address their concerns and to assist with response and removal activities. The following list briefly summarizes these activities:

- OSC Ball mobilized two of EPA's Community Involvement Coordinators (CIC) to assist with community outreach to concerned residents along Apache Trail. Beginning February 23, the EPA CICs and Tetra Tech START offered Lumex screening to nearby residents. Screening results, which are briefly summarized in the table below, indicated no mercury vapor concentrations above EPA action levels.

Address	Maximum Mercury Concentration Observed (ng/m <sup>3</sup> )
613 Apache Trail	37
615 Apache Trail	44
616 Apache Trail	48
617 Apache Trail	28
618 Apache Trail	54
619 Apache Trail	21
621 Apache Trail	Declined monitoring
622 Apache Trail	149
623 Apache Trail	46
625 Apache Trail	Declined monitoring
626 Apache Trail	105
627 Apache Trail	Declined monitoring
628 Apache Trail	Declined monitoring
629 Apache Trail	Declined monitoring

- Coordinating with local residents to determine potential methods to gain access to other properties that may have been impacted as a result of the spill.
- EPA and Tetra Tech START investigated several reports from local residents regarding other potential areas where mercury may have been located, including a nearby boat dock.
  - Boat dock near the end of Apache Trail; no indications of mercury were identified.
  - School bus stop near the end of Apache Trail; no indications of mercury were identified.
  - Area in the backyard of 624 Apache Trail, where male adolescent #2 had buried three mason jars containing elemental mercury; the jars were recovered and contaminated soil was excavated.
- OSC Ball and EPA CICs worked to prepare and distribute a fact sheet summarizing response activities and plans for completion to keep local residents informed.
- Use of the EPA website ([http://www.epaosc.org/site/site\\_profile.aspx?site\\_id=9769](http://www.epaosc.org/site/site_profile.aspx?site_id=9769)) to provide updated information and photographs, regarding site activities for the public.

## WASTE DISPOSAL SUMMARY

The following table summarizes the wastes that were shipped offsite for transportation and disposal:

Waste Stream	Estimated Quantity	Disposal Method
Non-Hazardous Solid Waste (personal items and debris)	320 cubic yards <sup>a</sup>	Landfill (Subtitle D)
Non-Hazardous Soil (contaminated soil)	90 cubic yards	Landfill (Subtitle D)
RCRA Hazardous Waste (mercury-contaminated)	6 cubic yards	Landfill (Subtitle C)
Elemental Mercury	75 fluid ounces	Reclamation
Household Hazardous Waste	275 gallons	Landfill/Incineration

Notes: <sup>a</sup> Includes approximately 30 cubic yards of personal items removed from 525 Sycamore Point and 510 Cove Road  
RCRA – Resource Conservation and Recovery Act

## Restoration

Following removal activities at each residence, EPA met with the appropriate homeowner to discuss and complete restoration activities to ensure the residence was restored to living condition.

If you have any questions or need additional copies of this ER letter report, please contact me at 678-775-3098 or Brian Croft at 678-775-3113.

screened for contamination.

1450 - health department showed up

1515 - Meeting at Grandmother's house with health department

- Source location is Jake Smith's friend's house.

- Jake said he spilled it originally. It was a gallon plastic jar/container

- Jake and Tori (girlfriend) played with it and attempted cleaning it up

- Nolan status: 624 Apache Trail. Jake's friend's grandfather's house. This is the source location.

- 611 Apache Trail. Jake's house. Potentially contaminated

- Tori said small amount of mercury got on her scalp and it stayed for 1 day.

- (770) 899-9824 Nolan's phone #

- Mercury is downstairs in the basement and garage. Floor is tiled. This is at 624 Apache Trail.

Scale: 1 square = \_\_\_\_\_

2/18/15

1745 OSL Bull contacts Nolan to discuss the spill at his grand father's.

Nolan describes that his grandfather cleaned up the mercury. Declines EPA access.

OSL Bull contacts Timothy Smith who also refuses EPA access

TACOMA, WA

*Rite in the Rain*  
ALL-WEATHER WRITING PAPER

**Yes, Rite in the Rain**  
is a wood-based & recyclable  
paper, but unlike plain paper...  
**it won't turn to mush**  
when exposed to:

**USE WET OR DRY**  
*most pens stop writing when wet*

- ALL PENCILS
- RITE IN THE RAIN PENS
- WAX MARKERS
- CRAYONS
- OIL PASTELS / PAINT

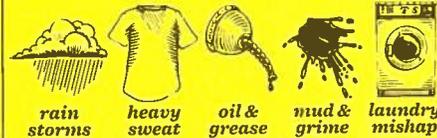

**WHEN DRY ONLY**  
*what you write won't wash off*

- PERMANENT MARKERS
- STANDARD BALLPOINTS

**WON'T WORK**  
*water-based inks bead off sheet*

- GEL PENS
- MOST HIGHLIGHTERS
- FOUNTAIN PENS
- WATER COLORS
- ACRYLIC PAINT

**ALL-WEATHER TOUGH!**

The Rite in the Rain story began nearly a century ago in the forests of the Great Northwest. Entrepreneur, Jerry Darling, recognized the logging industry's need for a durable material that could be written on and survive in poor weather conditions. Jerry developed a special coating that created a unique moisture shield on the hand-dipped sheets of paper that he and his wife, Mary, processed at their home. From humble beginnings our first all-weather paper was born! Over the many years we've perfected and patented our environmentally responsible coating process. Still located in Tacoma, our continued mission is to provide innovative products for professionals and enthusiasts who brave the outdoors.

**Outdoor writing products®  
for Outdoor writing people**

*All components of  
this product are recyclable*

***Rite in the Rain***

A patented, environmentally responsible, all-weather writing paper that sheds water and enables you to write anywhere, in any weather.

Using a pencil or all-weather pen, *Rite in the Rain* ensures that your notes survive the rigors of the field, regardless of the conditions.

Rite in the Rain

2-27-15

0800 START BU & TT on site, and OSC  
and 6 ERRS

Tasks for the day include

- prepping the road for decon gel
- removing mercury from under the stairs to the deck
- drying decon gel on driveway near garage

1430 Mr. Mortus gives permission to conduct removal at 510 Love Rd

1700 - Decon Gel applied to roadway in front of residence

- 10' x 10' area near garage is covered with decon gel
- Approximately  $\frac{1}{3}$  cup of mercury recovered from under steps; along with 6 bags of mercury contaminated soil

1800 the gel is setting up on the road but not really on the driveway. OSC Ball decides to encapsulate the mercury on the driveway with latex paint and dispose at the end of the job

Scale: 1 square =

*By Jason*  
2-27-15

2-28-15

0800 START BU & TT on site. OSC Ball and 6 ERRS

0830 - ERRS begins applying paint to the driveway and continues free mercury removal under the stairs.

- START & OSC search for reported hidden mercury behind neighbors house but do not find any.

- START & OSC search for mercury at 515 Cherokee Mills Rd but find no elevated levels

- Property management group for 510 Love Rd signs access agreement.

0945 ERRS completes painting of driveway

1315 - ERRS begins removing decon gel from roadway.

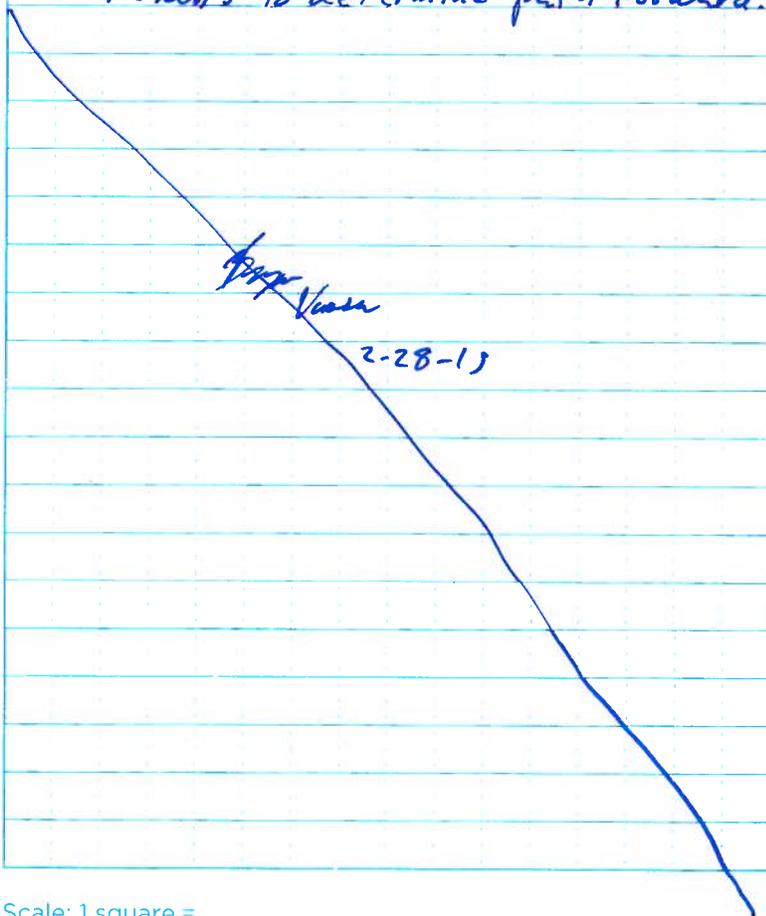

- START begins a test for transmissible mercury on the road, driveway, and yard. START dons yellow booties and then tyvek booties. Tyvek booties are changed between sampling areas.

Scale: 1 square =

and then screened by START with  
the Lunex, inventoried, and photographed

1145 ERRS has completed ~90% of gross  
decon in the basement living area.  
Most bags have screened  
>50,000 ng/m<sup>3</sup> without waiting  
the typical 15 minutes. Those  
bags are being inventoried and  
disposed of. Items identified  
by the homeowner as sentimental  
or deemed during inventory to  
be potential heirlooms or sentimental  
items are being saved to discuss  
disposal with the homeowner.

0800 START BV, TT, and BC on site.

GERRS and OSC Ball are onsite

0830 START and EPA screen the house at 624 Apache Trail.

0915 ERRS begins removing items from the garage again.

0930 EPA OSC Ball, EPA Glenn Adams, and START BV attend a conference call to discuss cleanup alternatives  
- Sulfur with sweeping agitation is recommended for cleaning the road.

1100 Arrive at Gwinnett County School Bus Yard and screen buses that transport kids that were involved in the spill. All buses were clean. Bus 532 was screened as specifically requested by a neighbor on Apache Trail.

1400 OSC Ball coordinates with ATSDR regarding the maximum cleanup level for 510 Love Rd.
