SUBJECT: MEADOWBROOK AVE VAPOR INTRUSION SITE, HATBORO, PA  
WORK ASSIGNMENT #SER00262 – TRIP REPORT

## BACKGROUND

The Environmental Protection Agency/Environmental Response Team (EPA/ERT) issued Work Assignment (WA) Number SERAS-262 to Lockheed Martin under the Scientific, Engineering, Response and Analytical Services (SERAS) contract to collect sub-slab soil gas, crawl space, indoor and ambient air samples as part of a vapor intrusion site investigation in a local elementary school. Crooked Billet Elementary School (Site) is located within the town of Hatboro, Pennsylvania (PA). A residential area borders the Site to the northwest, west and south. To the east of the Site is a mix of residential and commercial properties, and an industrial area is located to the northeast of the Site. Several EPA remedial sites are located in the vicinity of the subject school and are the primary impetus for this investigation. Prior to EPA cleanup activities, these sites had contaminated local public water supply wells with trichloroethene (TCE) and several other volatile organic compounds (VOCs).

The vapor intrusion sampling will provide data that will help EPA Region 3 personnel determine if there is the potential for adverse indoor air impact within the school.

All SUMMA<sup>®</sup> canister samples were analyzed for VOCs. The SUMMA<sup>®</sup> canister sampling and analysis were conducted following EPA Compendium Method TO-15, *Determination of Volatile Organic Compounds (VOCs) in Air Collected in Specially-Prepared Canisters and Analyzed by Gas Chromatography/Mass Spectrometry (GC/MS)*. Thirty-six SUMMA<sup>®</sup> samples plus one trip blank were collected and analyzed.

## OBSERVATIONS AND ACTIVITIES

SERAS sampling personnel mobilized to Site on March 12, 2015 to install eight sub-slab soil gas sampling wells. Ports were installed flush with the slab and capped with a Teflon<sup>®</sup> fitting that was removed during sampling operations. The ports were installed in accordance with SERAS standard operating procedure (SOP) #2082, *Construction and Installation of Permanent Sub-Slab Soil Gas Wells*.

On March 14 and 15, 2015, 24-hour sub-slab soil gas samples were collected from the installed wells. Indoor air samples were collected from 17 locations within the building. Crawl space air samples were collected from five locations: three from crawlspaces near the mechanical room in the basement, one from underneath the floor of the library, and one from a wall access panel in the girls' bathroom. Ambient air samples were

collected from two locations. A collocated sample was collected at each ambient location and from indoor air locations IA2 and IA7. Samples were collected using 6-liter (L) SUMMA<sup>®</sup> canisters fitted with individual flow controllers. Samples were collected following ERT/SERAS SOP #1704, *SUMMA Canister Sampling*. A 4 to 5-L time-weighted-average (TWA) sample was collected during a 24-hour sampling period. Field sampling worksheets are included in Appendix A. Sample locations on the ground floor are presented in Figure 1. Sample locations in the basement are presented in Figure 2.

The samples collected in the SUMMA<sup>®</sup> canisters were properly documented and delivered to the ERT/SERAS Laboratory for analysis. Sub-slab soil gas, crawl space, indoor and ambient air sample analysis was performed in accordance with EPA Method TO-15. Prior to sampling, the SUMMA<sup>®</sup> canisters and orifices were certified clean to meet the reporting levels for the analysis requested. Results for the TO-15 analysis were reported both in micrograms per cubic meter ( $\mu\text{g}/\text{m}^3$ ) and in parts per billion by volume (ppbv).

## RESULTS

A summary of the collected samples is presented in Table 1. Sample results are presented in Tables 2a through 2l in ppbv and Tables 3a through 3l in  $\mu\text{g}/\text{m}^3$ . Indoor air Regional Screening Levels (RSLs) are included in each table for comparison. The EPA Region 3 RSLs were not generated to represent health effect levels, action levels, or cleanup levels but rather as technical tools. If a chemical concentration exceeds an EPA RSL it requires further consideration by EPA and Agency for Toxic Substances and Disease Registry (ATSDR) toxicologists.

Sub-slab soil gas sample results are presented together with the indoor air samples collected in their respective locations, in in Tables 2a through 2l in ppbv and Tables 3a through 3l in  $\mu\text{g}/\text{m}^3$ . Sub-slab soil gas RSLs are increased from the indoor air RSLs by a magnitude of 10; however, results are not flagged relative to sub-slab soil gas RSLs.

Sample results for TCE and PCE by location on the ground floor are presented in Figure 3. Sample results for TCE and PCE by location in the basement are presented in Figure 4.

Complete analytical results are included in the Analytical Report, presented as Appendix B.

## FUTURE ACTIVITIES

There are no additional activities scheduled at this time.

### TESTING LABORATORIES INFORMATION

Analysis of Volatile Organic Compounds in Air by SERAS Method #1814 “*Analysis of Volatile Organic Compounds (VOCs) in SUMMA Canister Air Samples by Gas Chromatography/Mass Spectrometry (GC/MS)*”

ERT/SERAS Laboratory  
2890 Woodbridge Avenue  
Edison, NJ 08837

All analyses were performed according to our NELAP-approved quality assurance program. The test results meet the requirements of the current NELAP standards, where applicable, except as noted in the laboratory case narrative provided. Results are intended to be considered in their entirety and apply only to those analyzed and reported herein.

ERT/SERAS Laboratory is certified by the New Jersey Department of Environmental Protection, NELAP Laboratory Certification ID # 12023 for VOC analysis in air.

## Introduction

SERAS personnel, in response to WA# SERAS-262, provided analytical support for environmental samples collected from the Meadowbrook Avenue Site in Hatboro, PA as described in the following table. The support also included QA/QC, data review and preparation of an analytical report containing analytical and QA/QC results.

The samples analyzed at SERAS were treated with procedures consistent with those specified in SERAS SOP #1000, *Sample Receiving, Handling and Storage*.

Chain of Custody #	Number of Samples	Sampling Date	Date Received	Date Analyzed	Matrix	Analysis/ Method	Laboratory	Data Package
03-031615-104935-0001	19	03/15/15	03/16/15	03/17-22/15	Indoor Air	VOC/SERAS SOP# 1814	ERT/SERAS	AA031
	1				Blank			
	8				Soil Gas			
	5				Crawlspace Air			
	4				Ambient Air			

## Case Narrative

Sampling was conducted as per the site-specific Quality Assurance Project Plan (QAPP) and analyzed by the analytical methods as stated in the QAPP. The laboratory reported the data to three significant figures. Any other representation of the data is the responsibility of the user. Data were validated using a Stage 4 validation done manually (S4VM) in accordance with the “Guidance for Labeling Externally Validated Data for Superfund Use.” All data validation flags have been inserted into the results tables.

For compounds whose reporting limits (RLs) exceeded the project action limits, the laboratory reported estimated (J) concentrations if the compound concentrations exceeded the method detection limit (MDL) but were less than the RL. It should be noted that these data should be used with caution since the SUMMA canisters are certified to only 0.0200 ppbv. Any concentrations less than this value are reported to alert the end user of their possible presence in the sample.

### VOCs in Air Package AA031

The required benchmarks could not be achieved for 1,2-dibromoethane for samples 262-0009 through 262-0037 since the method detection limit (MDL) is greater than the project action limit.

The following samples and analyte concentrations are qualified estimated (J) since the RL exceeded the project action limits: Chloroform for samples 262-0009 and 262-0027; carbon tetrachloride for samples 262-0009, 262-0010, 262-0014, 262-0015, 262-0027 and 262-0029; trichloroethene for 262-0009, 262-0015, 262-0027 and 262-0029; and 1,4-dichlorobenzene for 262-0027. Samples 262-0009, 262-0010, 262-0014, 262-0015, 262-0027 and 262-0029 could not be analyzed using the full 1-liter volume due to their high moisture content.

Trip blank, 262-0036, contained the following analytes with concentrations that exceeded the RLs: acetone, methyl isobutyl ketone (MIBK), 2-hexanone, styrene, 1,1,2,2-tetrachloroethane, 1,2,4-trimethylbenzene, 1,2-dichlorobenzene and naphthalene. Reported results for acetone in samples 262-0013, 262-0016, 262-0017, 262-0025, 262-0026, 262-0028 and 262-0032; methyl isobutyl ketone in samples 262-0001, 262-0004, 262-0007, 262-0011, 262-0013, 262-0016, 262-0019, 262-0022, 262-0023, 262-0025 and 262-0028; 2-hexanone in samples 262-0004, 262-0007 and 262-0037; styrene in samples 262-0001, 262-0011, 262-0012, 262-0016, 262-0019, 262-0021, 262-0022, 262-0035 and 262-0037; 1,2,2-tetrachloroethane in sample 262-0034; 1,2,4-trimethylbenzene in samples 262-0001, 262-0004, 262-0011, 262-0012, 262-0013, 262-0016 through 262-0025, 262-0028, 262-0030 through 262-0035 and 262-0037; and naphthalene in samples 262-0003, 262-0005, 262-0011, 262-0012, 262-0013, 262-0016, 262-0017, 262-0019, 262-0021 through 262-0024, 262-0026, 262-0027 262-0030 through 262-0035 and 262-0037 are qualified non detect (U). The RLs of these samples were raised to the concentrations found in the samples since the sample results were less than five times the trip blank concentration.

For the continuing calibration verification of 3/18/15, chloromethane, 2-hexanone and naphthalene exceeded percent difference (%D) criterion. Reported results for chloromethane in samples 262-0011, 262-0012, 262-0013, 262-0016 through 262-0026; 2-hexanone in sample 262-0036; and naphthalene in samples 262-0025 and 262-0036 are qualified estimated (J).

The area for internal standard bromochloromethane exceeded QC limits for dilution run of sample 262-0002. The reported result for acetone in this sample is qualified estimated (J).

For the replicate analysis of sample 262-0021, 2-butanone and tetrahydrofuran exceeded relative percent difference (RPD) criterion. These compounds are qualified estimated (J) in this sample.

---

*The results presented in this report only relate to the samples analyzed. All results are intended to be considered in their entirety. The Environmental Response Team/Scientific, Engineering, Response and Analytical Services laboratory is not responsible for utilization of less than the complete report.*
