Subject: Fw: Any news on the Soils QAPP?

And, here is the email from Warren approving the QAPP amendments. Ignore the bit about the strange results from two different labs. He was confusing this with another issue that he and the QA chemists were looking at for me that was going on at a different site ... thankfully.

Thanks,
Erik

I am approving the QAPP. I still take issue with one of the responses to comments but it is too minor to hold up the approval. On the Pines issue with the strange results from 2 different labs, I have reviewed some of the voluminous data and as per our conversation today, will avail myself of further expert advice from other analytical chemists in the agency and get back with you on the matter.
