

# Utilized the HazMat ID

# Hazard Categorization Uses

- **Identify containers with like contents**
- **Segregate based on hazard**
- **Sample based on screening results**

# Field Screening

# The Periodic Table

## metals

non-metals  
noble gases

# FIELD SCREENING TESTS

- EXPLOSIVE?
- CORROSIVE?
- WATER SOLUBLE?
- WATER REACTIVE?
- CYANIDE?
- OXIDIZER?
- HALIDE?
- OTHER TESTS
- DESCRIPTION
- SULFIDE?
- FLAMMABILITY?

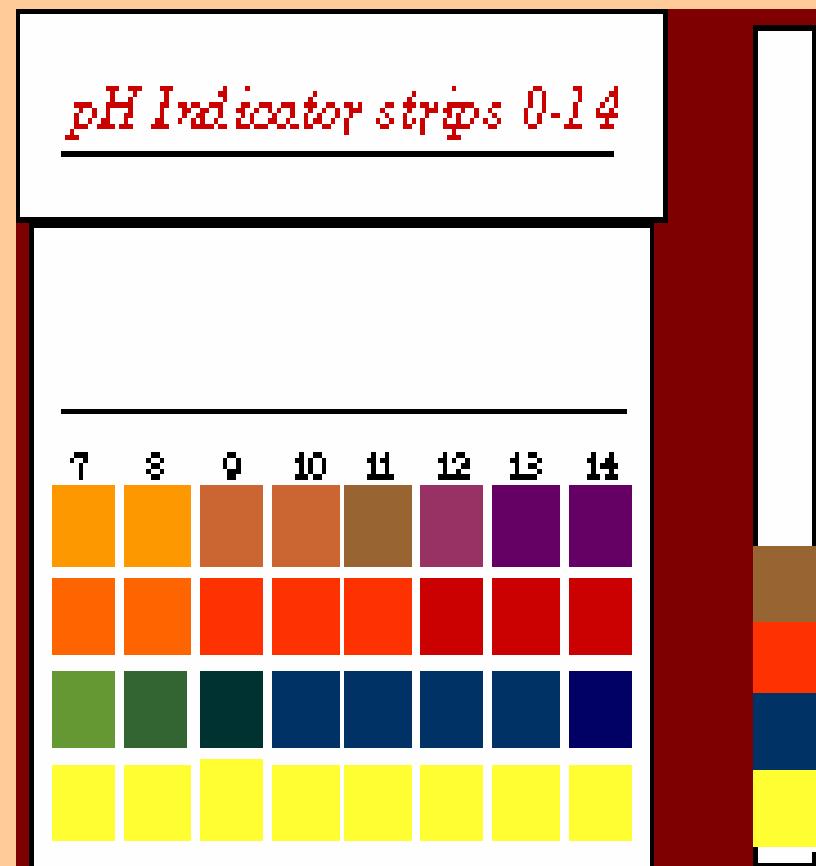

# Explosive?

- Consult ERG
- Hair pin test
- Other references
- Orange DOT label
- Nitro- compounds
- Explosives kits

# CORROSIVE

- pH paper
  - 0-6 Acid
  - 7 Neutral
  - 8-14 Base
- 
- Bleach?
  - High concentrations?

# pH of Common Items

	14.0	Strong Bases: NaOH, KOH, Ca(OH) <sub>2</sub>
	12.5	RCRA haz. waste
BASIC	12.0	Household ammonia
	10.0	Detergents and Baking Soda
	8.0	Seawater
	7.4	Blood
<u>NEUTRAL</u>	7.0	Pure water
	6.0	Rain
ACIDIC	4.0	Beer
	3.0	Orange juice, vinegar, wine, acid rain
	2.0	RCRA haz. waste/lemon juice, stomach acid
	1.0	Strong acids: HCl, HF, HI, H <sub>2</sub> SO <sub>4</sub> , HNO <sub>3</sub>
	0.0	Very acidic

# Recognition of Common Corrosives

## ACIDS

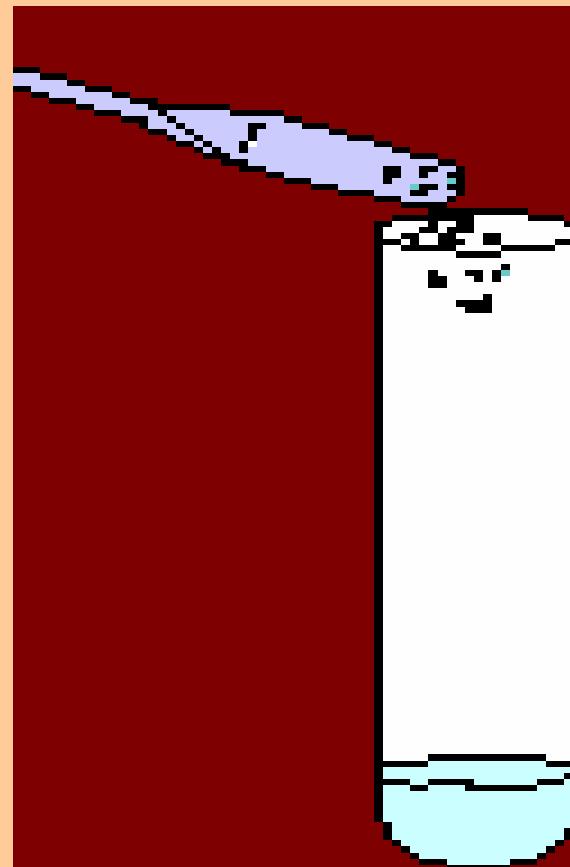

- Begin with Hydrogen “H”
- End in non-metal or nonmetal oxide
- Exceptions: Organic Acids (end in COOH), Phenol
- Examples: HCl,  $\text{H}_2\text{SO}_4$ ,  $\text{CH}_3\text{COOH}$ , HF,  $\text{HNO}_3$
- Usually liquids or a gas dissolved in water

## BASES

- Metal + Hydroxide (OH)
- Metal + Oxygen
- Active Metal (column 1-2 on periodic table)
- Exceptions: Ammonia ( $\text{NH}_3$ ), Amines, Carbonates
- Examples: NaOH,  $\text{K}_2\text{O}$ , Li, KOH,  $\text{Ca}(\text{OH})_2$ ,  $\text{NaHCO}_3$
- Usually solids or solids dissolved in water

# WATER SOLUBILITY

- DISSOLVES (Y/N)
- FLOAT (hydrocarbons)
- SINK (halogenated hydrocarbons)
- EMULSIFY (coffee creamer)
- REACTIVE—
  - HEAT
  - BUBBLES (flammable, toxic?)

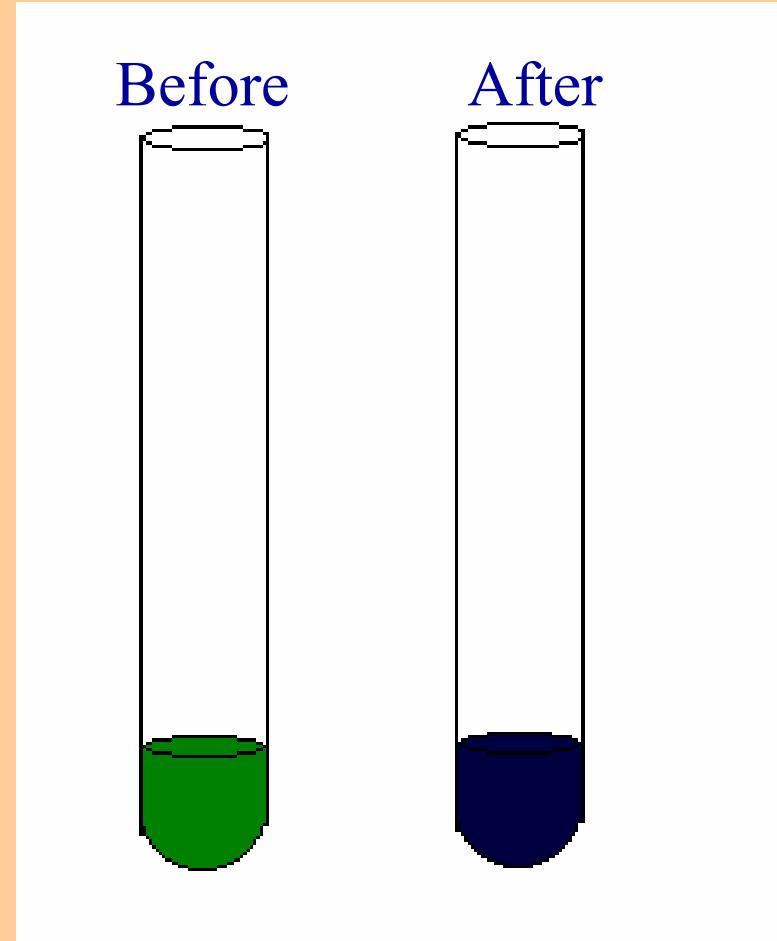

# REACTIVES

- Normally unstable-reacts violently
- Mixes with water to form toxic or flammable gases
- Capable of detonation at STP or if heated in confinement
- Contains cyanide or sulfide and generates toxic gases, vapors, or corrosive fumes

# CYANIDE

- Only if pH is greater than 7
- Use cyanide test by adding solid cyanide test test 2 to a test tube with 1/4 inch cyanide test 1
- Add a pea size (or  $\frac{1}{4}$  inch) amount of the unknown
- Add 3-5 drops of Acid Test solution
- Deep Prussian blue indicates cyanide

# TOXICITY

- Toxicity Characteristic Leaching Procedure (TCLP) identifies 39 chemicals to test for in wastes for their ability to leach out and contaminate ground water
- Acutely hazardous wastes: (1) Oral LD<sub>50</sub> less than 50 mg/kg, (2) a dermal LD<sub>50</sub> of less than 200 mg/kg, or (3) an inhalation LC<sub>50</sub> of less than 2 mg/kg.

# OXIDIZER TEST

- Use Potassium Iodide (KI) paper
- Acidify KI paper with 2-3 drops of acid test
- Hold paper over then touch unknown with paper
- Blue/black or purple color indicates an oxidizer

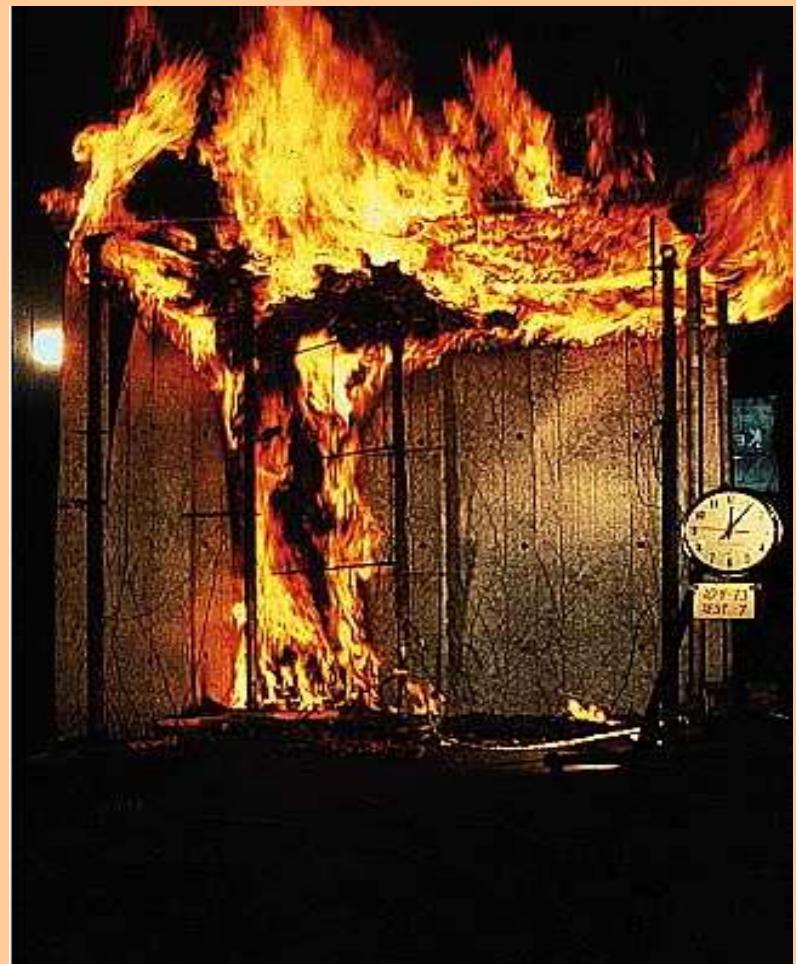

# SULFIDE TEST

- Wet Sulfide Test Paper (Lead Acetate) with a few drops of water
- Touch paper to acidified unknown on watch dish
- Color change from white to brown indicates sulfide (lead may cause a black or silver color)

# FLAMMABILITY

- Place a pool the size of a 50 cent piece on watch dish
- Bring a lit match slowly towards the watch dish
- Ignites B4 the edge
- Ignites when touched
- Match acts as wick

# OTHER TESTS

- CGI - Combustible Gas Indicator
- PID - Photoionization Detector
- FID - Flame Ionization Detector
- Colorimetric Indicator (Drager) Tubes
- Oxygen Sensor

# Colorimetric Indicator Tubes

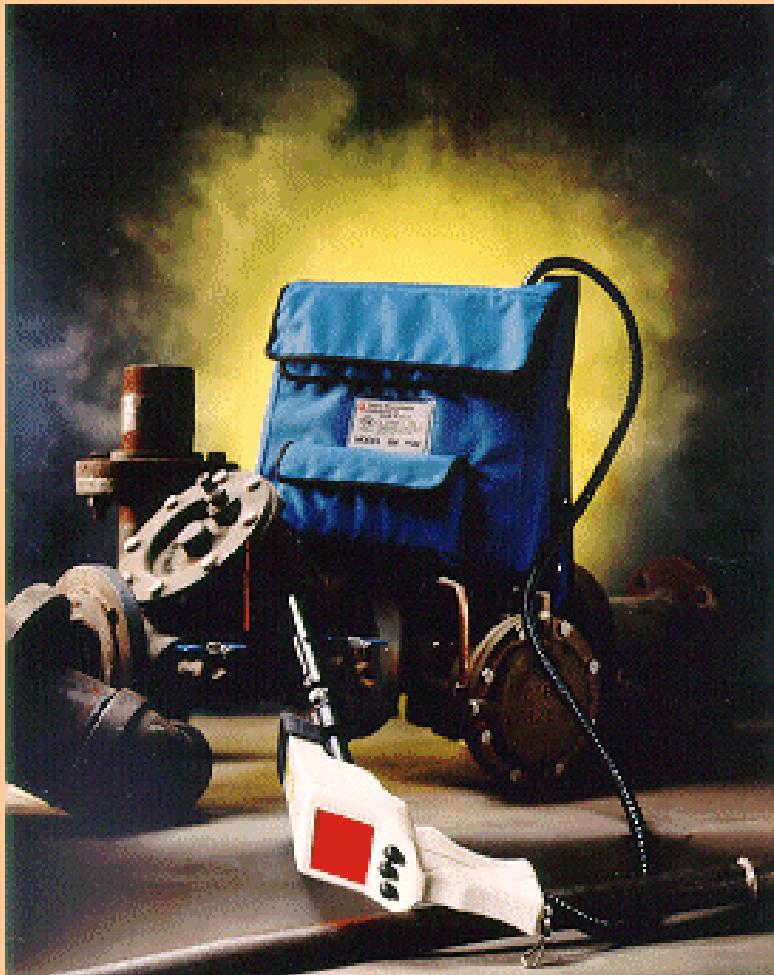

- Measures: Compounds or Family of Compounds
- Units: PPM or % for Quantitative Measurements
- Range: Varies; Example: 1 Compound - 5 Different Tubes With Different Ranges

# Photoionization Detector

- Measures: Organic and Inorganic Air Contaminants (Must have an Ionization Potential Below the Measuring Probe)
- Units: Indicates in PPM
- Range: .5 to 2000 ppm
- Probes: Hnu: 9.6eV, 10.2eV, and 11.7eV

# Flame Ionization Detector

- Measures: Organic Atmospheric Contaminants (Compounds That Will Burn In a Flame)
- Units: Indicates in PPM
- Range: .5 to 1000 ppm

# SensIR—Solid/Liquid ID of Covalently bonded (non-metals) compounds (mainly organics)

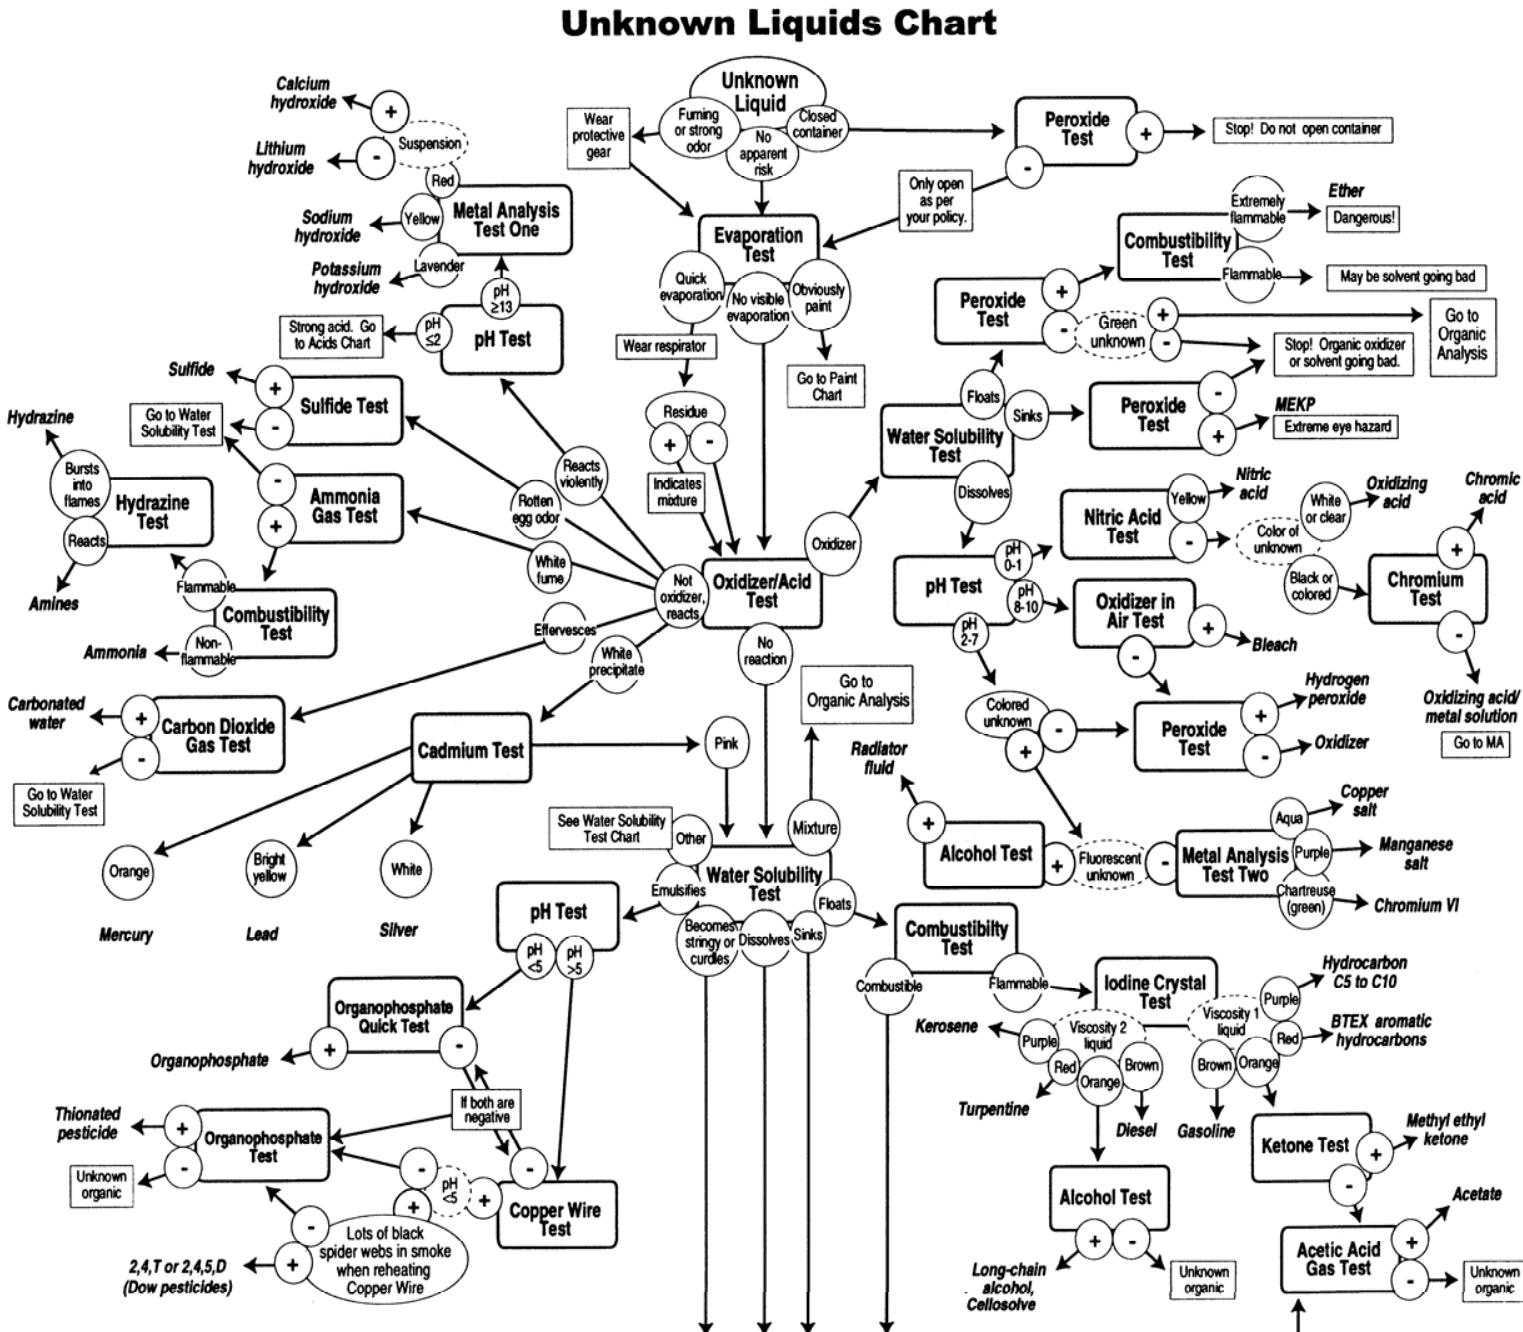

# Summary

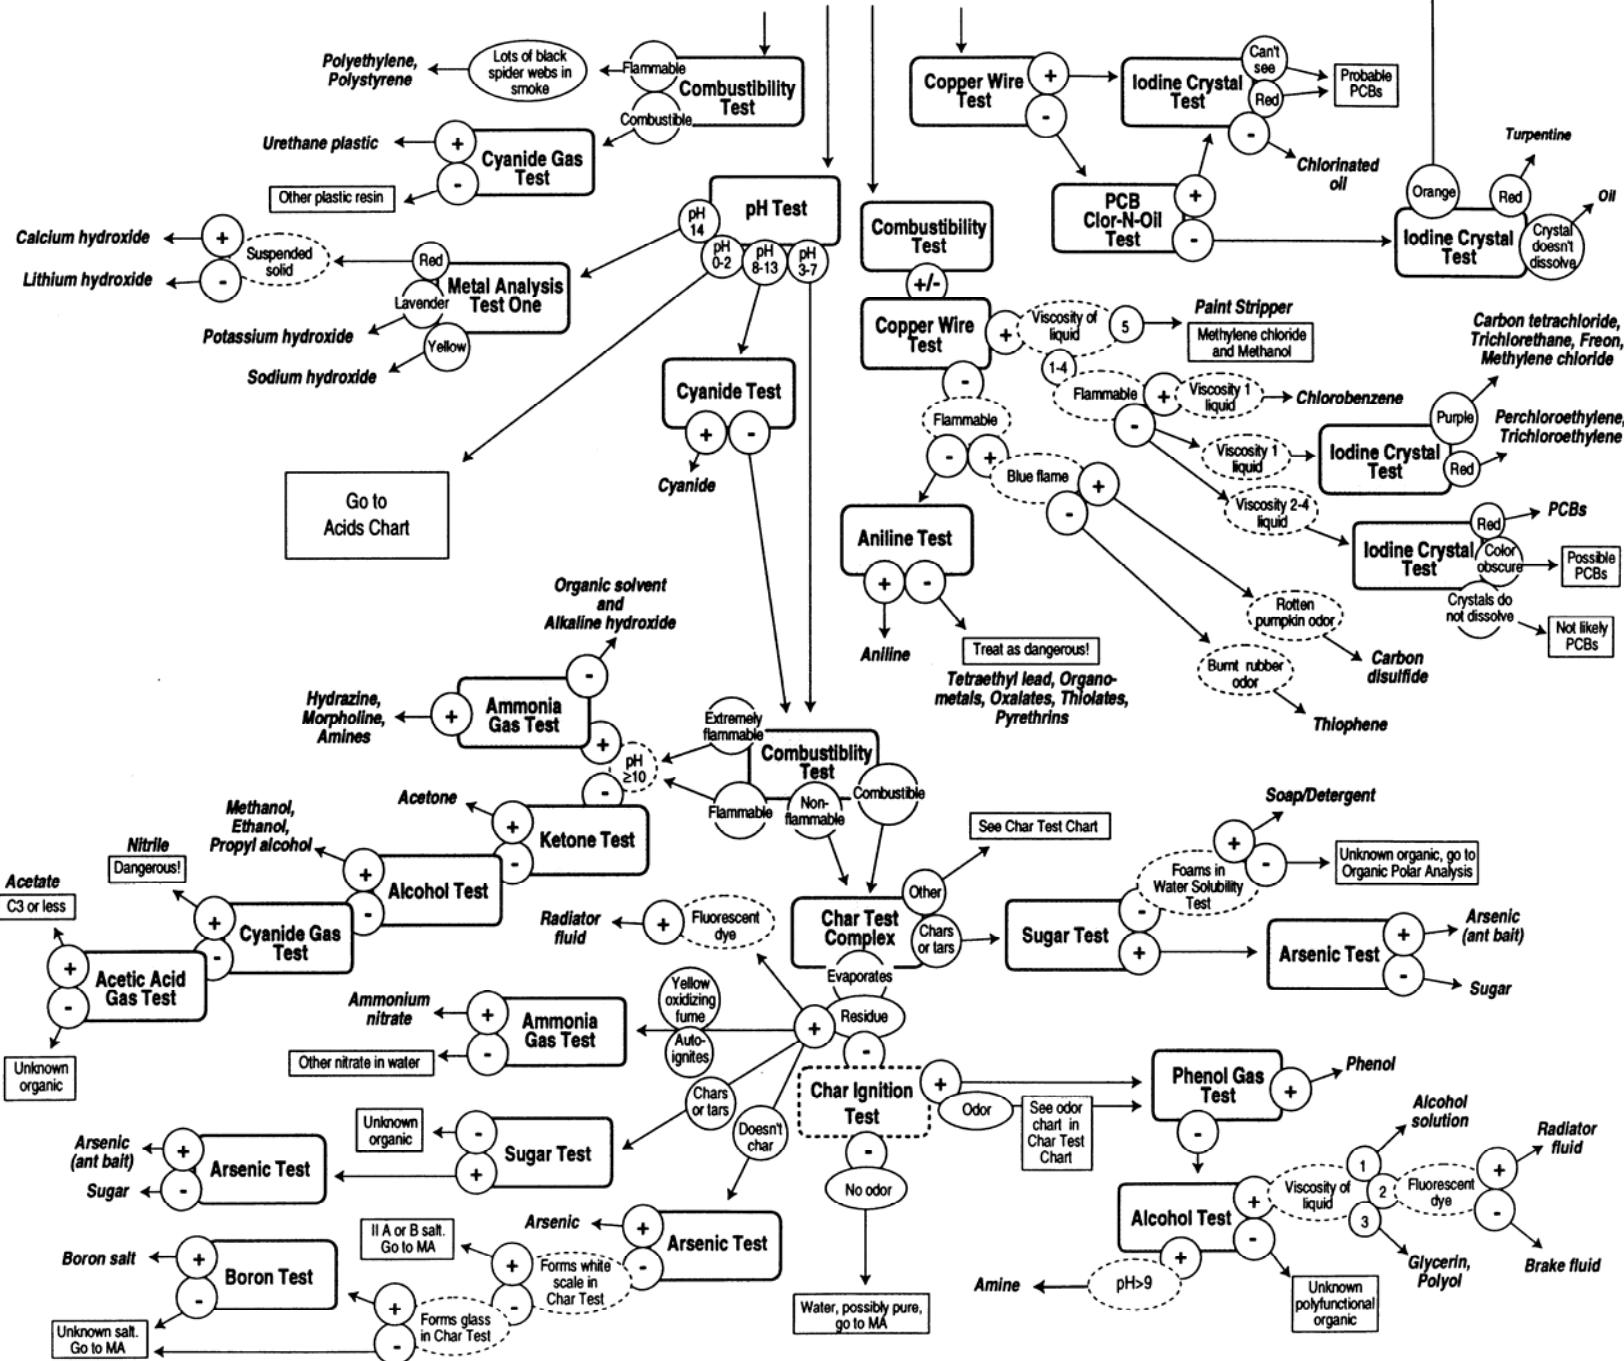

- Separate into the 9 DOT Classes
- Separate acids and bases
- Separate oxyacids from non-oxyacids
- Separate oxidizers from flammables
- Separate water reactives from water based solutions
- Multiple Classes are a separate class

# **FIELD IDENTIFICATION OF UNKNOWN MATERIALS**

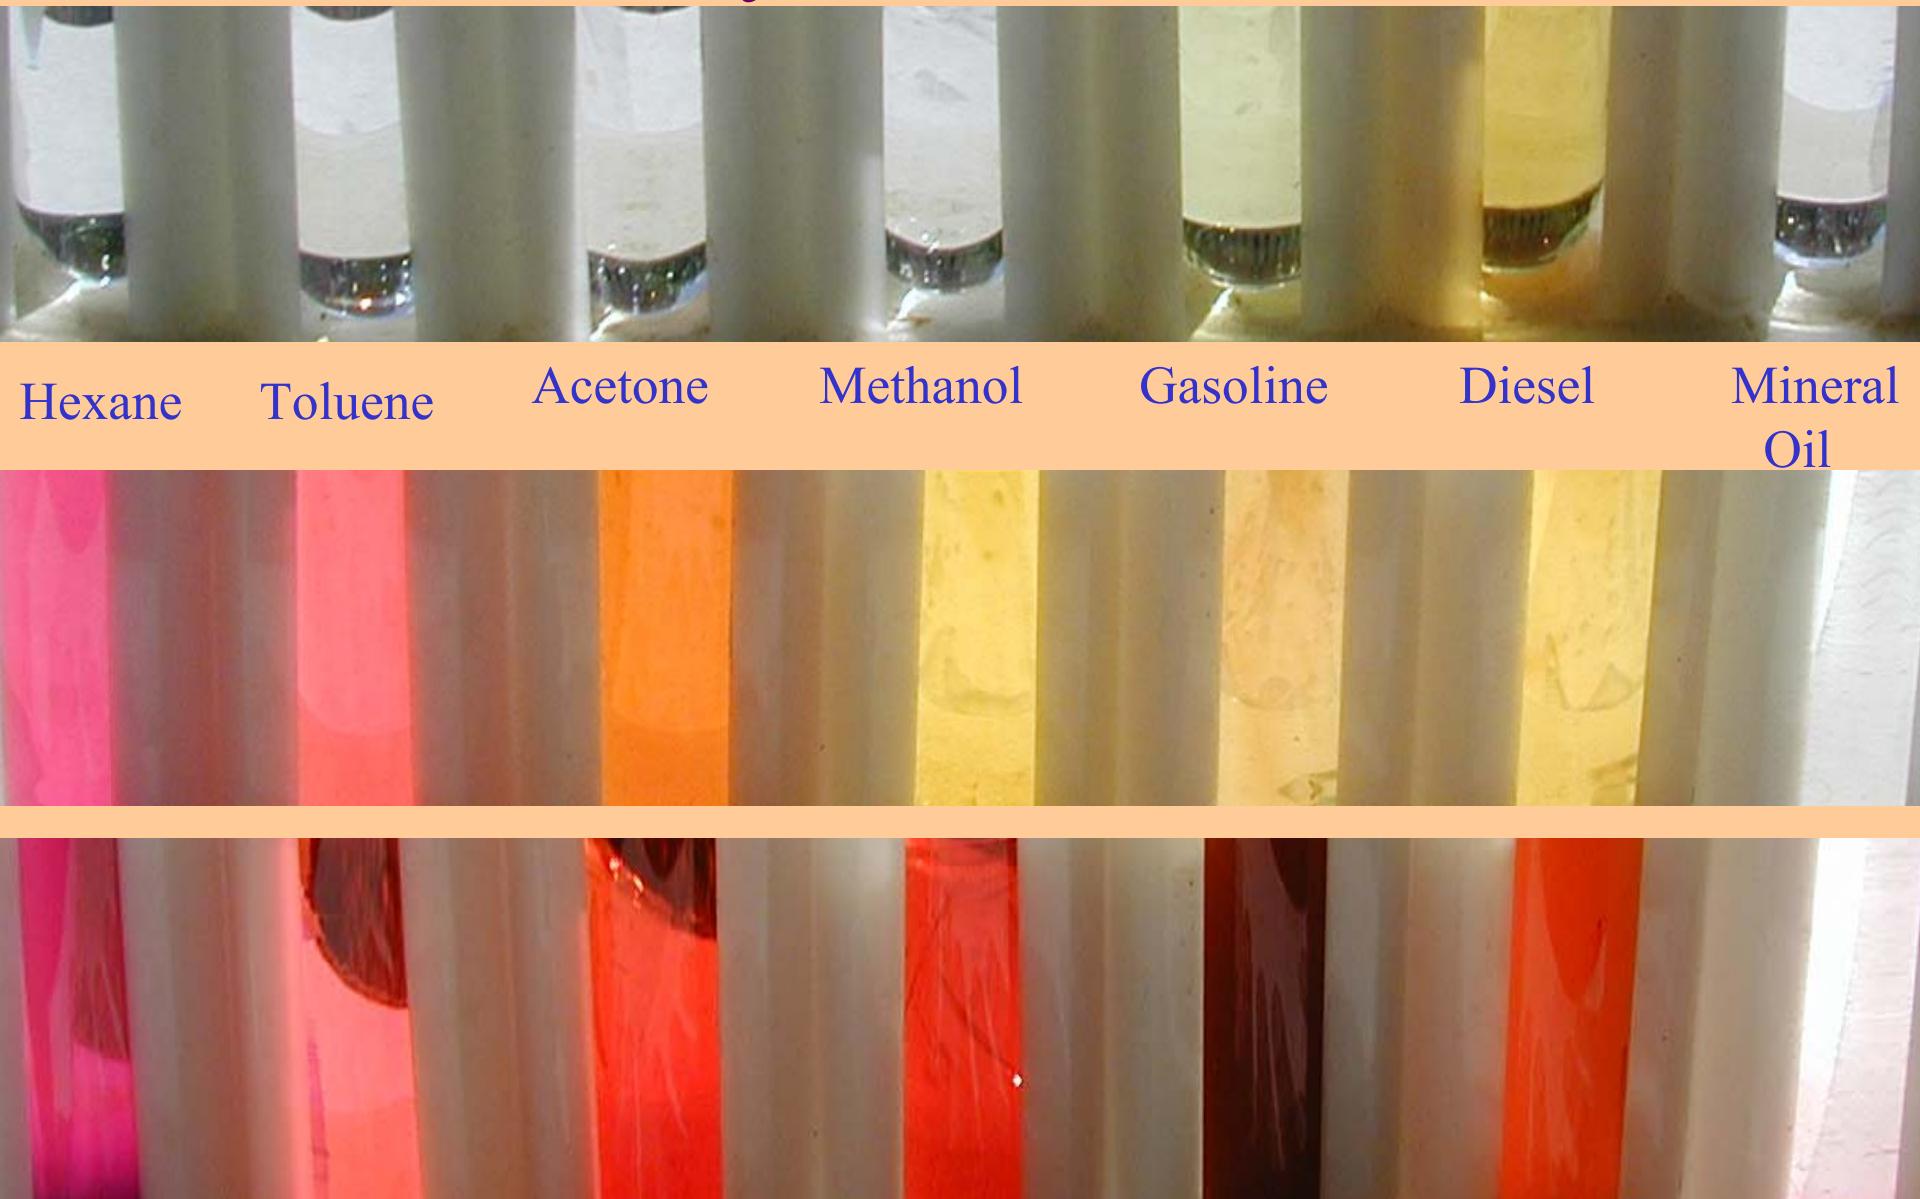

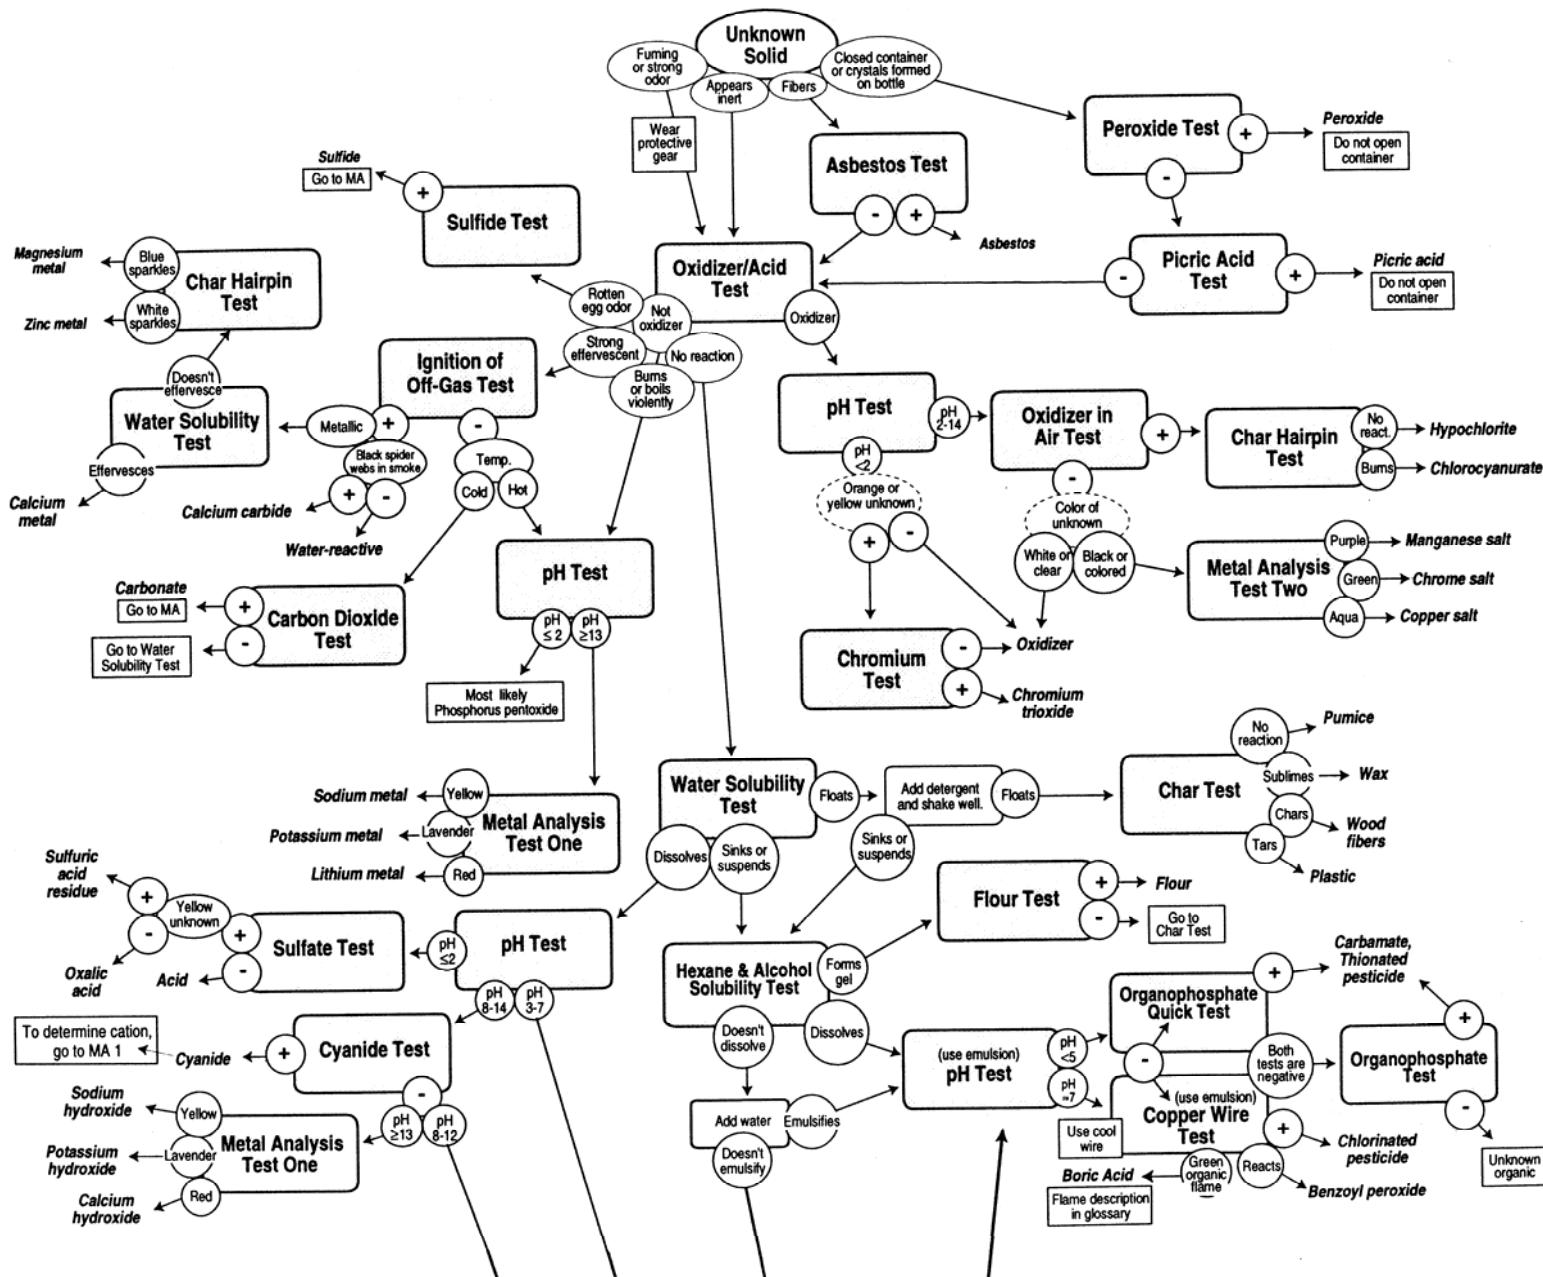

# HazCat® Chemical Identification System

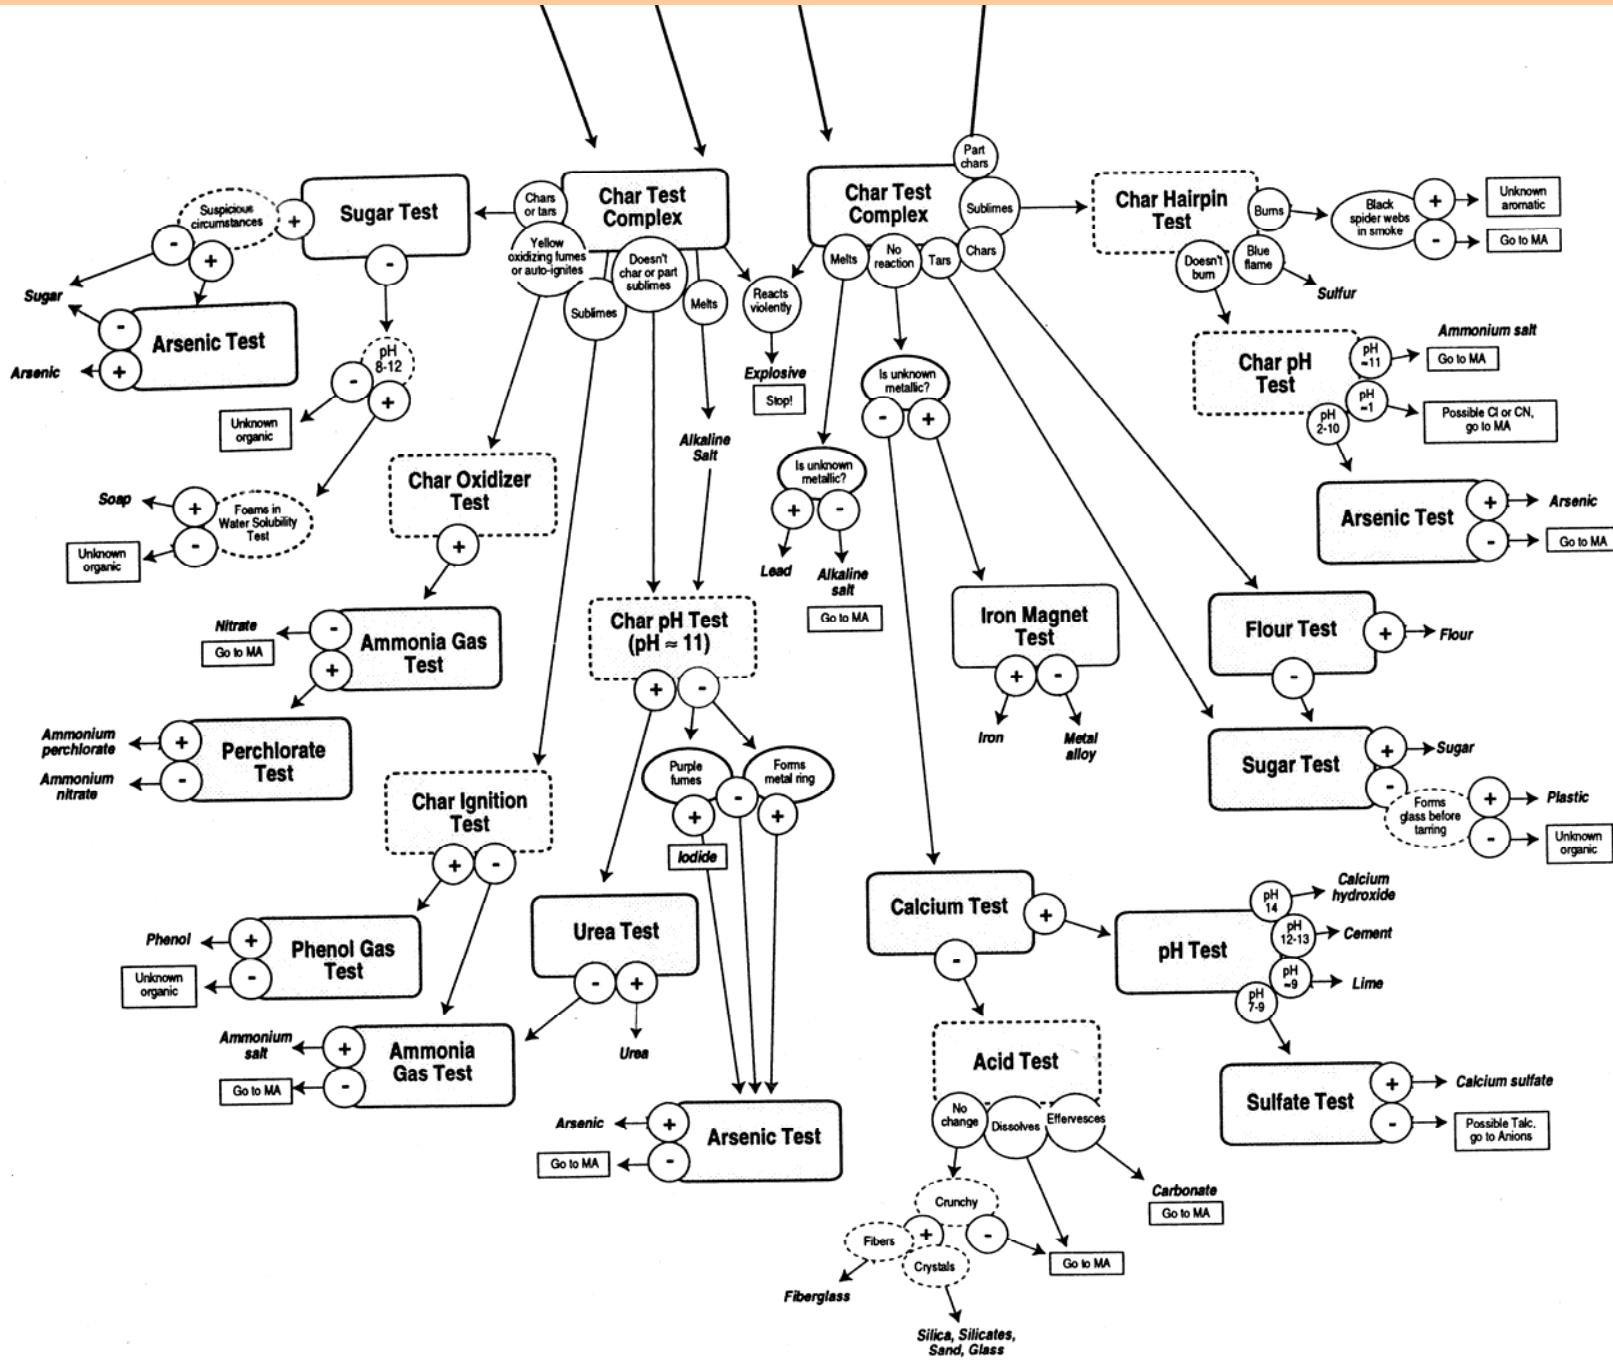

# Iodine Crystal Test Results

## Unknown Solids Chart

## HazCat® Chemical Identification System

# CONCLUSION

- If properly applied the HazCat(TM) flowchart can assist in identifying materials in the field
- The large number of compounds and mixtures makes it difficult to always identify the unknown material
- Reference materials can also assist in the identification of materials in the field
