RE: **Results of Follow Up Indoor Air and Outdoor Ambient Air Analyses & Additional Soil and Cinder Block Analyses.**
Nexus Church Building
3144 Cullman Avenue, Charlotte NC
WR Project Number: 03130430.03

Dear Mr. Craig,

As authorized by EnviroAnalytics Group, LLC (EAG) WithersRavenel (WR) has completed the collection of indoor air and outdoor ambient air samples from the Nexus Church building located at 3144 Cullman Avenue in Charlotte, NC. The samples were submitted to ESC Lab Sciences (ESC) where they were analyzed for 1,1 dichloroethene (1,1 DCE), cis 1,2 dichloroethene (cis 1,2 DCE), trans 1,2 dichloroethene (trans 1,2 DCE), tetrachloroethylene (PCE), trichloroethylene (TCE) and vinyl chloride (VC) by EPA Method TO 15 Selected Ion Method (SIM). WR also collected six shallow soil samples from locations adjacent to the rear loading dock located on the south side of the Nexus Church, and three samples of the deteriorated cinder block that partially comprise the loading dock. Each of these samples were analyzed for volatile organic compounds (VOCs) by EPA Method 8260/5035A. This report provides description and documentation of the sampling activities and the results of the laboratory analyses.

Documentation of Sampling Activities

Indoor Air and Outdoor Ambient Air Sampling

On February 4, 2016 WR representative Christopher Fay returned to the subject site to collect follow up samples of indoor air and outdoor ambient air. The first indoor and outdoor air sampling event was conducted in August 2015. WR met with Pastor Noah Manyika, who is the owner of the building at 3144 Cullman Avenue and leader of the Nexus Church. Pastor Manyika provided access to the inside of the building. WR then deployed three individually certified six-liter summa canisters each equipped with 24-hour flow controllers inside the building at the approximate locations shown in **Figure 1**. One of the canisters was placed on a table in the approximate center of the Fellowship Hall (sample ID IA-1 Fellowships). The remaining two canisters were placed side by side on a table located near the approximate

center of the sanctuary (sample IDs IA-2 Sanctuary and Dup Sanctuary). These are the same sampling locations WR utilized in August 2015. Following deployment of the canisters, WR and Pastor Manyika left the building and locked the door.

WR then deployed two individually certified six-liter summa canisters with 24-hour flow controllers at locations between five and fifteen feet from the southern and northern exterior walls of the building (sample IDs Ambient South and Ambient North). These are the same ambient air sampling locations to the north and south of the church that WR utilized in August 2015. The canisters were secured using chains and locks to inert features associated with the building to discourage theft of the canisters while they remained outside overnight. Photographs showing the locations of the deployed canisters are provided in **Attachment A**.

WR returned to subject site approximately 24 hours later on February 5, 2016 to close and retrieve the six summa canisters. Pastor Manyika provided access to the inside of the church and it appeared that the outdoor ambient air canister were not tampered with overnight. Copies of the WR field log book pages that document the sampling locations and starting and ending vacuum pressures for each canister are provided in **Attachment B**. WR then transported the samples under chain of custody to a FedEx location in Matthews NC where they were transported via priority overnight delivery to ESC for analysis.

Soil and Cinder Block Sampling

During the afternoon of February 4, 2016, WR collected six samples of shallow soils from locations adjacent to the rear loading dock that is attached to the south side of the Nexus Church, and one soil sample from beneath the loading dock. WR also collected three samples of the deteriorated cinder blocks that help comprise the loading dock. The purpose of this sampling activity was to determine if indications of past or recent releases of VOCs were evident in the analytical data for the samples.

WR used a properly decontaminated hand auger to collect the soil samples, and a stainless steel spoon to collect samples of deteriorated cinder block. Due to wetter than normal weather conditions in the Charlotte area during the winter of 2016, the water table was encountered at a depth of approximately 1.5 feet below ground at the time of sampling. Therefore, the soil sample from the 0.5 foot to 1.0 foot depth interval was submitted for analysis of VOCs. The field notes that document these sampling activities are provided in **Attachment B**. The soil samples were transported under chain of custody to Pace Analytical Laboratories (Pace) in Huntersville, NC for analysis.

Results of Laboratory Analyses

Indoor Air and Outdoor Ambient Air Results

The results of TO 15 SIM analysis on the six summa canister samples are summarized below:

Table 1: Follow Up Indoor Air and Outdoor Ambient Air Sampling Results
Nexus Church Building: 3144 Cullman Avenue, Charlotte NC

Sample ID	Sampling Apparatus	ESC Canister ID Number	Start Sampling Date (mm/dd/yy)	End Sampling Date (mm/dd/yy)	I,1 Dichloroethene	cis-1,2-Dichloroethene	trans-1,2-Dichloroethene	Tetrachloroethylene	Trichloroethylene	Vinyl chloride
					(ug/m ³)					
IA-1 FELLOWSHIPS	Six Liter Summa	13 SIM	2/4/16	2/5/16	<0.0793	<0.0793	<0.0793	56.7	3.10	<0.0511
IA-2 SANCTUARY	Six Liter Summa	1018 SIM	2/4/16	2/5/16	<0.0793	0.312	<0.0793	1.89	3.93	<0.0511
DUP SANCTUARY	Six Liter Summa	Not Recorded	2/4/16	2/5/16	<0.0793	0.376	<0.0793	2.20	4.77	<0.0511
AMBIENT AIR SOUTH	Six Liter Summa	1193 SIM	2/4/16	2/5/16	<0.0793	<0.0793	<0.0793	13.0	1.53	<0.0511
AMBIENT AIR NORTH	Six Liter Summa	895 SIM	2/4/16	2/5/16	<0.0793	<0.0793	<0.0793	2.2	<0.107	<0.0511

Notes: IA = Indoor air sample. See Figure 1 for sample locations.

Ambient = Outdoor ambient air sample. See Figure 1 for sample locations.

All samples were 24-hour composites.

ESC = ESC Lab Sciences: Certified laboratory that performed TO 15 SIM analyses.

Samples analyzed by EPA TO15 Selected Ion Method. See lab report for details.

These results are summarized by location in **Figure 1**, and the ESC analytical report and chain of custody record are provided in **Attachment C**.

According to an e-mail from on-site EPA representative Ken Rhame to EAG, the screening level established by EPA for TCE in ambient air at the Nexus Church is 8 ug/m³ (see copy of e-mail in **Appendix D**). All of the detected concentrations of TCE in the indoor and outdoor air samples shown in **Table 1** are below this screening level. According to the North Carolina Department of Environment and Natural Resources (NCDENR) Division of Waste Management the Residential Vapor Intrusion Screening Level for PCE is 8.34 ug/m³ and there is no currently established Screening Level for cis 1,2 DCE. The detected concentrations of PCE in the indoor air samples from the Sanctuary shown in **Table 1** are below this screening level. However, the indoor air sample from the Fellowship Hall, and the outdoor ambient air sample from the south of the building were above this level.

The presence of 13 ug/m³ of PCE and 3.1 ug/m³ of TCE in the outdoor ambient air collected just south of the church is unexpected given the results of the first sampling event in August 2015. However, upon further inspection of the area to the south of the church, WR noticed that the water table is exposed in the construction area where a retaining wall for a new rail line is being constructed (see Photo #s 5-7 in **Attachment A**). Previous analysis of groundwater

samples from monitoring wells PMW-20A & 20B located behind the Nexus Church indicated the presence of high concentrations of VOCs in this area. Therefore it is possible that the source of the PCE and TCE detected in the Ambient South sample is the exposed groundwater in the nearby construction area.

Similarly, the concentration of 56.7 ug/m³ of PCE in the indoor air sample from the Fellowship Hall is unexpected and questionable, in that two indoor air samples collected about 30 feet away in the Sanctuary were an order of magnitude lower in concentration. According to the WR representative who deployed the sampler, the doors to the Fellowship Hall were closed during the time of the indoor air sample collection, and the heating unit for the building was allowed to remain operational during the sampling period to prevent possible damage that could be caused by freezing of the plumbing within the building.

As shown in Photo #1 in **Attachment A**, the Fellowship Hall appeared to have recently been used for some form of festivity as the tables were covered with plastic table clothes and centerpieces. Church members attending such festivities may have been wearing recently dry-cleaned clothes. Hence, the observed PCE concentrations in the Fellowship Hall may be a residual effect of recent use of the room by parishioners.

WR recommends collection and analysis of additional indoor and outdoor air samples, and a sample of the exposed groundwater in the construction area to the south of the church. Results of the additional samples will be used to evaluate the reproducibility of the current results, and possibly, to identify the source of VOCs in the nearby ambient air.

Soil and Cinder Block Analysis Results

Results of the analyses of the soil and cinder block samples are summarized below:

Table 2: Follow Up Soil and Cinder Block Sampling Results
Nexus Church Building: 3144 Cullman Avenue, Charlotte NC

CB = sample of cinder block that comprises loading dock behind Nexus Church. See Figure 2 for sample locations

Dup = duplicate soil sample

NA = Not applicable

ND = Not detected

ppm = parts per million

Samples analyzed by EPA 8260/5035A Volatile Organics. See lab report for details.

These results are summarized by location in **Figure 2**, and the Pace laboratory analytical report and chain of custody record are provided in **Attachment C**.

The analytical results for the soil samples indicate the presence of low concentrations of four VOCs within the shallow soils adjacent to and beneath the loading dock. None of the analytical results indicated the presence of high concentrations of VOCs, which might indicate the occurrence of a recent release of solvents. Rather the results are more indicative of low concentrations of VOCs that may represent residual signs of past releases of solvents when the site was in use by a previous industrial occupant. Regardless, the results do not suggest that there is an active high concentration source of VOCs in the near surface soils behind the church. It follows that the high concentrations of VOCs observed in the groundwater samples from nearby monitoring wells PMW-20A & 20B have been present underground for a long time, and have not been subject to the effects of weathering to which the near surface soils have been exposed.

Analysis of the deteriorated cinder block samples indicated only a trace concentration of one VOC (2-butanone). Like the nearby soils, it appears that the majority of VOCs that may have caused the deterioration of the cinder blocks shown in Photo #8 of **Attachment A** have weathered to non-detectable levels due to continued exposure to the elements over time.

WR appreciates the opportunity to be of assistance to EAG. Should you have any questions or comments regarding the contents of this report, please do not hesitate to contact us at 919-469-3340.

Sincerely,

All sample aliquots were received at the correct temperature, in the proper containers, with the appropriate preservatives, and within method specified holding times. All MDL (LOD) and RDL (LOQ) values reported for environmental samples have been corrected for the dilution factor used in the analysis. All Method and Batch Quality Control are within established criteria except where addressed in this case narrative, a non-conformance form or properly qualified within the sample results. By my digital signature below, I affirm to the best of my knowledge, all problems/anomalies observed by the laboratory as having the potential to affect the quality of the data have been identified by the laboratory, and no information or data have been knowingly withheld that would affect the quality of the data.

Abbreviations and Definitions

SDG	Sample Delivery Group.
MDL	Method Detection Limit.
RDL	Reported Detection Limit.
ND,U	Not detected at the Reporting Limit (or MDL where applicable).
RPD	Relative Percent Difference.
(dry)	Results are reported based on the dry weight of the sample. [this will only be present on a dry report basis for soils].
Original Sample	The non-spiked sample in the prep batch used to determine the Relative Percent Difference (RPD) from a quality control sample. The Original Sample may not be included within the reported SDG.
(S)	Surrogate (Surrogate Standard) - Analytes added to every blank, sample, Laboratory Control Sample/Duplicate and Matrix Spike/Duplicate; used to evaluate analytical efficiency by measuring recovery. Surrogates are not expected to be detected in all environmental media.
Rec.	Recovery.
SDL	Sample Detection Limit.
MQL	Method Quantitation Limit.
Unadj. MQL	Unadjusted Method Quantitation Limit.

ESC Lab Sciences is the only environmental laboratory accredited/certified to support your work nationwide from one location. One phone call, one point of contact, one laboratory. No other lab is as accessible or prepared to handle your needs throughout the country. Our capacity and capability from our single location laboratory is comparable to the collective totals of the network laboratories in our industry. The most significant benefit to our "one location" design is the design of our laboratory campus. The model is conducive to accelerated productivity, decreasing turn-around time, and preventing cross contamination, thus protecting sample integrity. Our focus on premium quality and prompt service allows us to be **YOUR LAB OF CHOICE**.

* Not all certifications held by the laboratory are applicable to the results reported in the attached report.

RE: Project: NEXUS RAIL SIDING
Pace Project No.: 92285439

Dear David Craig:

Enclosed are the analytical results for sample(s) received by the laboratory on February 04, 2016. The results relate only to the samples included in this report. Results reported herein conform to the most current TNI standards and the laboratory's Quality Assurance Manual, where applicable, unless otherwise noted in the body of the report.

Analyses were performed at the Pace Analytical Services location indicated on the sample analyte page for analysis unless otherwise footnoted.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Taylor Ezell
taylor.ezell@pacelabs.com

ANALYTICAL RESULTS

Project: NEXUS RAIL SIDING

Pace Project No.: 92285439

Sample: NX-2-0.5-1.0 Lab ID: 92285439002 Collected: 02/04/16 13:05 Received: 02/04/16 15:26 Matrix: Solid

Results reported on a "dry weight" basis and are adjusted for percent moisture, sample size and any dilutions.

ANALYTICAL RESULTS

Project: NEXUS RAIL SIDING

Pace Project No.: 92285439

Sample: DOCK-1 **Lab ID: 92285439006** Collected: 02/04/16 13:40 Received: 02/04/16 15:26 Matrix: Solid

Results reported on a "dry weight" basis and are adjusted for percent moisture, sample size and any dilutions.

REPORT OF LABORATORY ANALYSIS

This report shall not be reproduced, except in full,
without the written consent of Pace Analytical Services, Inc..

ANALYTICAL RESULTS

Project: NEXUS RAIL SIDING
Pace Project No.: 92285439

Sample: CB-3 Lab ID: 92285439010 Collected: 02/04/16 13:55 Received: 02/04/16 15:26 Matrix: Solid

Results reported on a "dry weight" basis and are adjusted for percent moisture, sample size and any dilutions.

QUALIFIERS

Project: NEXUS RAIL SIDING

Pace Project No.: 92285439

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above adjusted reporting limit.

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

PQL - Practical Quantitation Limit.

RL - Reporting Limit.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected.

Acid preservation may not be appropriate for 2 Chloroethylvinyl ether, Styrene, and Vinyl chloride.

A separate vial preserved to a pH of 4-5 is recommended in SW846 Chapter 4 for the analysis of Acrolein and Acrylonitrile by EPA Method 8260.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

ANALYTE QUALIFIERS

- 1g The internal standard response is below criteria. No hits associated with this internal standard. Results unaffected by high bias.
- 2g The sample was weighed and preserved in the laboratory from a soil jar. Sample was not preserved within 48 hours.
- C9 Common Laboratory Contaminant.
- F3 The recovery of the second source standard used to verify the initial calibration curve for this analyte is outside the laboratory's control limits. The result is estimated.
- M1 Matrix spike recovery exceeded QC limits. Batch accepted based on laboratory control sample (LCS) recovery.

Subject: Re: Additional Vapor Intrusion Work

Our screening levels for indoor air at the church property is 8 micrograms per cubic meter. This was established considering sensitive populations (women of child bearing age and children) present.

Hi Ken,

We are in the process of evaluating potential screening levels for the Church indoor air.

Please let me know which EPA screening level was referenced for TCE in the e-mail below.

Thanks,

Lucia Casabo
