

# DataRAM 4000 Graphed Results

Air monitoring was conducted using DataRAM Particulate Monitors. Instantaneous (or real time) readings from the DataRAMs are presented as a blue line on the graphs. The numbers on the left axis of the graph show the concentration of particulate matter in the air at a given time (shown on the bottom axis of the graph). The air monitors were placed in a stationary location during the time period shown on the bottom of the graph. You will see “peaks” on the graph which represent times at which the smoke was blown in the direction of our monitor. The intensity of these peaks varies depending on the concentration of particulate matter in the air. The Time-Weighted Average (TWA) is presented on the top corner of the graphs. This line is an average of all the instantaneous readings over the monitoring period indicated at the bottom of the graph.

## Background Location Graphs

These graphs are data compiled from monitors placed upwind of the site.

## Background Location - PM2.5

October 24-25, 2017 19:34 - 10:11

1.42 mi 158.68° from Source

## Background Location - PM2.5

October 26, 2017 09:46 - 20:33

1.42 mi Heading 158.68° from Source

## Background Location - PM2.5

October 27 -28, 2017 08:40 - 03:59

1.42 mi Heading 158.68° from Source

# Background Location - PM2.5

October 29 -30, 2017 07:27 - 03:48

1.42 mi Heading 158.68° from Source

## Background Location - PM2.5

October 31, 2017 01:24 - 16:08

1.42 mi Heading 158.68° from Source

## Background Location - PM2.5

October 30 -31, 2017 03:51 - 01:20
