**Subject: Phase II Targeted Brownfields Assessment  
Former AutoZone Site  
Dellwood, St. Louis County, Missouri  
EPA Region 7, START 4, Contract No. EP-S7-13-06, Task Order No. 0002.055  
Task Monitors: Todd Davis, Site Assessment Manager  
Randolph Brown, On-Scene Coordinator**

Dear Mr. Brown:

Tetra Tech, Inc. (Tetra Tech) is submitting the attached Phase II Targeted Brownfields Assessment report regarding the Former AutoZone site in Dellwood, Missouri. If you have any questions or comments pertaining to this submittal, please call the START Project Manager at (816) 412-1961.

Sincerely,

A handwritten signature in blue ink, appearing to read 'Ann Marie Pohlman'.

Ann Marie Pohlman  
START Project Manager

A handwritten signature in blue ink, appearing to read 'Ted Faile'.

Ted Faile, PG, CHMM  
START Program Manager

Enclosures

## EXECUTIVE SUMMARY

Tetra Tech, Inc. (Tetra Tech) was tasked by the U.S. Environmental Protection Agency (EPA) under the Superfund Technical Assessment and Response Team (START) Contract (EP-S7-13-06) to conduct a Phase I Targeted Brownfields Assessment (TBA), Phase II TBA, and Analysis of Brownfields Cleanup Alternatives (ABCA) at the Former AutoZone site (the site), an approximately 1.96-acre property at 9901 and 9947 West Florissant Avenue in Dellwood, Missouri. Phase II activities proceeded as specified in a site-specific Quality Assurance Project Plan (QAPP) developed by START and submitted to EPA in July 2018 (Tetra Tech 2018a).

In June 2018, Tetra Tech conducted a Phase I TBA of the site on behalf of the EPA. The following findings and opinions resulted from the TBA, primarily based on interviews, a site reconnaissance, previous investigations, and examination of historical documentation:

- Review of city directories identified the site address (9947 W Florissant Ave.) as an AutoZone from 2001 to at least as late as 2010. Improvements at the site were destroyed by fire in November 2014 due to civil unrest. Possible fill and grading associated with the fire at the former AutoZone property poses a recognized environmental condition (REC) to the site.
- Review of historical documents revealed that the New York Grill (9901 W Florissant Ave.) was built in 1978. Lead-based paint (LBP) and asbestos-containing building materials (ACBM) were likely used in construction of the restaurant.
- Tetra Tech completed a Tier 1 non-invasive vapor encroachment screen of the site. Even though the site is not listed on the vapor encroachment screen, a vapor encroachment condition (VEC) is posed to the site based on possible presence of soil and groundwater contamination because the site hosted an AutoZone that burned down during civil unrest. This poses a REC to the site.

Purposes of this Phase II TBA were to determine if historical activities at the site had impacted soils and groundwater. During this investigation at the site, soil and groundwater samples were collected for laboratory analysis. Surface soil sampling results were compared to (1) Missouri Risk-Based Corrective Action (MRBCA) Lowest Default Target Levels (LDTL) and (2) MRBCA Tier 1 Risk-based Target Levels (RBTL) for residential and non-residential land use, soil type 3, ingestion, inhalation (vapor emissions and particulates), and dermal contact. Subsurface and groundwater sampling results were compared to (1) MRBCA LDTLs and (2) MRBCA Tier 1 RBTLs for residential and non-residential land use, soil type 3, indoor inhalation of vapor emissions. Findings and conclusions are as follows:

- All six surface soil samples contained at least one volatile organic compound (VOC) at a concentration above the laboratory reporting limit. None of the samples contained a VOC at a concentration above an LDTL. Four surface soil samples contained at least one polycyclic aromatic hydrocarbon (PAH) at concentration exceeding a laboratory reporting limit.

One sample contained a benzo[a]pyrene concentration exceeding the LDTL and the residential RBTL. Five surface soil samples contained at least one total petroleum hydrocarbon (TPH) level above the laboratory reporting limit. No sample contained TPH at concentration above the LDTL. Five surface soil samples contained arsenic, barium, chromium, and lead concentrations exceeding laboratory reporting limits. Additionally, four surface soil sample results exceeded the LDTL for lead, and five sample results exceeded the LDTL and residential RBTL for arsenic; however, those concentrations of lead and arsenic were comparable to naturally occurring surface soil concentrations within St. Louis County, Missouri (U.S. Geological Survey [USGS] 2018).

- Nine of the 19 subsurface soil samples contained at least one VOC at a concentration above the laboratory reporting limit. No sample contained a VOC at concentration above an LDTL. Two subsurface soil samples contained at least one PAH at concentration above a laboratory reporting limit. No sample contained a PAH at a concentration above the LDTL. None of the 19 subsurface soil samples contained a TPH level above the laboratory reporting limit, and no sample contained TPH at a concentration above the LDTL. All subsurface soil samples contained concentrations of arsenic, barium, and chromium above laboratory reporting limits. Fourteen of 19 subsurface soil samples contained concentrations of lead above laboratory reporting limits. Additionally, all detected results for lead exceeded the LDTL, and 17 of the 19 sample results for arsenic exceeded the LDTL; however, those lead and arsenic concentrations were comparable to naturally occurring surface soil concentrations within St. Louis County, Missouri. No subsurface soil sample analyte concentration exceeded an RBTL.
- Results from groundwater samples were compared to MRBCA LDTLs and RBTLs. Two groundwater samples were collected from one soil boring location on site. Acetone and chloromethane, which are laboratory contaminants, were detected in sample GW-3; acetone was detected in GW-3-FD. Neither groundwater sample contained a site-related VOC at a concentration above a laboratory reporting limit or an LDTL. Neither groundwater sample contained a detectable PAH or TPH concentration. Sample GW-3 contained arsenic, barium, chromium, lead, and selenium at concentrations above laboratory reporting limits. Sample GW-3-FD contained barium, chromium, and selenium above laboratory reporting limits. Neither sample contained a Resource Conservation and Recovery Act (RCRA) metal at a concentration above an LDTL. In no groundwater sample did an analyte concentration exceed an RBTL.

Analytical results indicate detections of analytes at the former AutoZone site. However, follow-up action appears unwarranted to address subsurface soil and groundwater because no analyte concentration in subsurface soil and groundwater samples exceeded an RBTL. The benzo[a]pyrene concentration exceeded the residential RBTL in surface soil sample SS-5, collected at 9901 West Florissant Avenue (New York Grill). If future use of this portion of the site is to be for residential purposes, additional sampling is recommended. Further, asbestos sampling and an LBP survey should be completed prior to any renovation or demolition of the restaurant and/or storage outbuilding.

## **1.0 INTRODUCTION**

Tetra Tech, Inc. (Tetra Tech) was tasked by the U.S. Environmental Protection Agency (EPA) under the Superfund Technical Assessment and Response Team (START) Contract (EP-S7-13-06) to conduct a Phase I Targeted Brownfields Assessment (TBA), Phase II TBA, and Analysis of Brownfields Cleanup Alternatives (ABCA) at the Former AutoZone site (the site), an approximately 1.96-acre property at 9901 and 9947 West Florissant Avenue in Dellwood, Missouri. The site currently consists of a vacant lot with a partial concrete parking area (where the former AutoZone was located) and an operating restaurant (New York Grill) with a storage outbuilding and an asphalt parking area. The vacant lot is currently used by Missouri American Water to store equipment and supplies. The site has historically been occupied by a residence, restaurants, and an AutoZone. The most recent usage of the site was as a restaurant and AutoZone. According to the City of Dellwood representative, the restaurant and outbuilding are to be demolished, and the site is to be redeveloped into a senior living center.

In June 2018, Tetra Tech conducted a Phase I TBA of the site on behalf of EPA. The following findings and opinions resulted from the TBA, primarily based on interviews, a site reconnaissance, previous investigations, and examination of historical documentation:

- Review of city directories identified the site address (9947 W Florissant Ave.) as an AutoZone from 2001 to at least as late as 2010. Improvements at the site were destroyed by fire in November 2014 due to civil unrest. Possible fill and grading associated with the fire at the former AutoZone property poses a recognized environmental condition (REC) to the site.
- Review of historical documents revealed that the New York Grill (9901 W Florissant Ave.) was built in 1978. Lead-based paint (LBP) and asbestos-containing building materials (ACBM) were likely used in construction of the restaurant.
- Tetra Tech completed a Tier 1 non-invasive vapor encroachment screen of the site. Even though the site is not listed on the vapor encroachment screen, a vapor encroachment condition (VEC) is posed to the site based on possible presence of soil and groundwater contamination because the site hosted an AutoZone that burned down during civil unrest. This poses a REC to the site.

The following sections address the background and site history, describe Phase II TBA activities, present and evaluate analytical results, discuss findings, and offer conclusions.

### **1.1 PURPOSES**

Purposes of this Phase II TBA included a determination on whether historical activities at the site had impacted soil and groundwater. During this Phase II TBA, sampling of soil and groundwater occurred to

confirm or eliminate the RECs to the site (i.e., possible historical releases of contaminants) identified during a Phase I TBA in June 2018.

## **1.2 SPECIAL TERMS AND CONDITIONS**

No special terms or conditions were identified during the Phase II TBA.

## **2.0 BACKGROUND AND SITE HISTORY**

This section briefly describes the site (physical setting, site location and land use, and adjacent land use), and summarizes previous assessments.

### **2.1 PHYSICAL SETTING**

The site is in St. Louis County in eastern Missouri. Soils at the site predominantly are Urban land-Harvester complex (U.S. Department of Agriculture [USDA] 2018). Urban land soils have generally been modified by disturbance of the natural layers. The Harvester series consists of moderately well-drained silt and clay loam material. Slopes range from 9 to 20 percent. The Fishpot-Urban land complex make up the rest of the soils on the site. The Fishpot series consists of somewhat poorly-drained stratified silty or clay loam. Slopes range from 0 to 5 percent (USDA 2018). The site is within the Central Lowland Groundwater Province and lies within the Mississippi River's 500-year floodplain. Geology in the region is generally characterized by crystalline, Precambrian rocks that underlie Paleozoic and younger sedimentary rocks (U.S. Geological Survey [USGS] 1997).

Groundwater in the site area likely flows south-southeast (following the topographic gradient) toward Maline Creek. Potable water in the site area is supplied by Missouri American Water via surface water intakes on the Mississippi and Missouri Rivers (Tetra Tech 2018b).

Runoff from precipitation at the site likely flows over paved surfaces toward the south-southeast, where it is directed into stormwater drains on the property and along West Florissant Avenue (Tetra Tech 2018b).

### **2.2 SITE DESCRIPTION AND FEATURES**

The site is at 9947 (former AutoZone) and 9901 West Florissant Avenue (New York Grill) in Dellwood, St. Louis County, Missouri. The site encompasses 1.96 acres and consists of a vacant lot with a partial concrete parking area (east and north of the former AutoZone building) on the northern portion, and an operating restaurant (New York Grill) with a storage outbuilding and an asphalt parking area on the southern portion. The vacant lot is currently used by Missouri American Water to store equipment and supplies.

The site is included on the Clayton, Missouri, U.S. Geological Survey (USGS) 7.5- minute topographic series map (USGS 2015) (see Appendix A, Figure 1). Coordinates at the approximate center of the site are 39.7473700 degrees north latitude and 90.2801510 degrees west longitude.

### **2.3 SITE HISTORY AND LAND USE**

The site currently consists of a vacant lot with a partial concrete parking area (east and north of the former AutoZone building) on the northern portion, and an operating restaurant (New York Grill) with a storage outbuilding and an asphalt parking area on the southern portion. The vacant lot is currently used by Missouri American Water to store equipment and supplies. The site has historically been occupied by a residence, restaurants, and an AutoZone. The site hosted an AutoZone from 2001 to 2014.

Improvements at the site were destroyed by fire in November 2014 due to civil unrest. Intended future use of the site is redevelopment consisting of a senior living center.

### **2.4 ADJACENT PROPERTY USE**

The site is bounded north by Taco Bell, east by West Florissant Avenue with Auto Spa Speedy Wash beyond, south by Fast Track Urgent Care, and west by residential properties.

### **2.5 SUMMARY OF PREVIOUS ASSESSMENTS**

This section summarizes a Phase I TBA, the only known previous environmental investigation at the site. In June 2018, Tetra Tech conducted the Phase I TBA of the site on behalf of EPA. Historical documentation in the Phase I TBA report indicates that the site at 9901 West Florissant Avenue was identified in the city directories as a residence from 1949 to 1958 and restaurants from 1986 to 2014. New York City Grill was listed as the restaurant in 2014. The site at 9947 West Florissant Avenue was identified in the city directories as an AutoZone from approximately 2001 to 2010. The Phase I TBA identified a REC associated with former presence of an AutoZone parts store on the site. The AutoZone was destroyed by fire in November 2014 due to civil unrest (Tetra Tech 2018b).

### **3.0 PHASE II TARGETED BROWNFIELDS ASSESSMENT ACTIVITIES**

The following sections describe the scope of the Phase II TBA, field exploration and methods, and associated quality assurance (QA)/quality control (QC) activities. START members Ann Marie Pohlman, Jenna Pratt, and Tetra Tech subcontractor, Bulldog Drilling out of Dupo, Illinois, performed sampling from September 11 through 12, 2018. Photographic documentation is in Appendix B. A copy of the site logbook with documented site activities is in Appendix C. Soil and groundwater samples were collected to identify contamination possibly present at the site. An objective was to characterize possible historical releases to the environment. Activities proceeded as specified in a site-specific Quality Assurance Project Plan (QAPP) for the Phase II TBA developed by START and submitted to EPA in July 2018 (Tetra Tech 2018a).

#### **3.1 SURFACE SOIL SAMPLING**

Surface soil samples were collected at five locations on the site. Two locations were within the former building (AutoZone) footprint, one was on the west side of the former building footprint, one location was on the west side of the storage outbuilding, and one location was on the east side of the restaurant (see Appendix A, Figure 2). Surface soil samples were collected within 0 to 2 inches below ground surface (bgs) by use of a stainless-steel garden trowel. A duplicate sample was collected at location SS-2 to be used as a QA/QC measure of total method precision.

At each sampling interval, three to five aliquots per composite sample were placed in a disposable aluminum pie pan, and a grab sample for analysis for volatile organic compounds (VOC) and total petroleum hydrocarbons (TPH) – gasoline range organics (GRO) was collected in accordance with EPA SW-846 Method 5035; approximately 5-gram plugs of soil (one plug per sample container) were collected by use of a disposable, tipless, plastic syringe, and transferred to two 40-milliliter (mL) vials preserved with sodium bisulfate, and one 40-mL vial preserved with methanol. In addition, one unpreserved 40-mL vial or similar container was packed with soil for percent solids determination. Remaining soil from each composite sample was homogenized and placed into two 8-ounce jars for analyses for TPH – diesel range organics (DRO), TPH – oil range organics (ORO), polycyclic aromatic hydrocarbons (PAH), and total Resource Conservation and Recovery Act (RCRA) metals (including mercury). Table 1 below lists soil sample information, coordinates, and collection dates and times.

### 3.2 SUBSURFACE SOIL SAMPLING

Bulldog Drilling advanced nine direct-push technology (DPT) soil borings into groundwater (anticipated at 15 to 20 feet bgs), or to geologic refusal (approximately 19 to 29 feet bgs), whichever occurred first. One boring was along the northern edge of the site, one boring was within the former building (AutoZone) footprint, one boring was at the northeast corner of the site, two borings were along the western portion of the former building footprint, one boring was along the eastern portion of the former building footprint, one boring was at the eastern portion of the site, one boring was west of the storage outbuilding at the southwest portion of the site, and one boring was east of the restaurant at the southeast portion of the site (see Appendix A, Figure 2). Continuous soil borings were collected at 4- and 5-foot depth intervals and screened by use of a photoionization detector (PID). PID readings and soil classifications such as color, type, and moisture content were documented in boring logs (see Appendix D). At each boring location, two soil samples were collected and submitted for laboratory analysis. Soil samples were collected within depth intervals inducing the highest PID readings. If no elevated readings were observed, collection occurred within intervals where visual impacts appeared or odors were detected. If no indications of contamination were found, the soil samples were collected within depth intervals selected by the START field team, including intervals within the capillary fringe (if groundwater was encountered) or within the bottom portion of the boring (if refusal was encountered). At sample location SB-3, sandy soils were encountered; at other sampling locations, clay was encountered. A duplicate sample was collected at boring location SB-7 (0-2 feet bgs) to be used as a QA/QC measure of total method precision.

At each sampling interval, a grab sample for analyses for VOCs and TPH-GRO was collected in accordance with EPA SW-846 Method 5035; approximately 5-gram plugs of soil (one plug per sample container) were collected by use of a disposable, tipless, plastic syringe, and transferred to two 40-mL vials preserved with sodium bisulfate, and one 40-mL vial preserved with methanol. Remaining soil was placed into two 8-ounce jars for analyses for TPH-DRO, TPH-ORO, PAHs, RCRA total metals (including mercury), and percent solids. Table 2 below lists soil sample information, including sample depths, coordinates, and collection dates and times.

**TABLE 2**

- TPH Total petroleum hydrocarbons
- VOC Volatile organic compound
- °N Degrees north
- °W Degrees west

### 3.3 GROUNDWATER SAMPLING

Groundwater sampling was attempted at all soil boring locations; however, groundwater was encountered only at SB-3/GW-3, where wet sands were encountered during drilling (see Appendix A, Figure 2).

Depth to groundwater at SB-3/GW-3 was 15.66 feet bgs. No groundwater samples were collected at the other locations (SB-1, SB-2, SB-4, SB-5, SB-6, SB-7, SB-8 or SB-9) because groundwater was not encountered prior to geologic refusal.

Groundwater samples were collected by use of a Geoprobe® Screen Point 16 sampling apparatus. At the sampling location where groundwater was encountered, the sampler was advanced to the bottom of the boring (about 28.5 feet bgs), and then the screen was exposed to the aquifer. After the screen was deployed at the bottom of the boring, about 1 gallon of water was purged through disposable polyethylene tubing by use of a peristaltic pump.

Samples for analyses for VOCs and TPH-GRO via SW-846 Method 8260 were collected into three 40-mL vials preserved with hydrochloric acid (HCl). Samples for analyses for TPH-DRO, TPH-ORO, and PAHs via SW-846 Method 8270 were collected in two unpreserved 1-liter (L) amber glass bottles. Samples for RCRA total metals analysis via SW-846 Method 6020 were collected in 1-L plastic bottles preserved with nitric acid (one container per sample).

Each sample was labeled, packaged accordingly, and placed in a cooler maintained at or below a temperature of 4 degrees Celsius (°C) from time of collection until submittal for laboratory analyses. After completion of sampling, soil cores were placed back in their respective boreholes, which were then plugged with bentonite. A duplicate sample was collected at boring location SB-3 (GW-3-FD) to be used as a QA/QC measure of total method precision. To evaluate effectiveness of decontamination procedures for the Geoprobe sampling equipment, an equipment rinsate blank sample was collected. To assess field- or laboratory-introduced contamination, a field blank sample was collected. Table 3 below summarizes groundwater and aqueous QC samples collected during this Phase II TBA.

**TABLE 3**

**GROUNDWATER SAMPLE SUMMARY  
FORMER AUTOZONE, DELLWOOD, MISSOURI**

<b>Boring ID</b>	<b>Sample No.</b>	<b>Latitude (°N)</b>	<b>Longitude (°W)</b>	<b>Analyses</b>

	GW-3-FD			
Equipment Blank	Equipment Blank	NA	NA	
Field Blank	Field Blank	NA	NA	

Notes:

Latitude and longitude are based on North American Datum (NAD) 83.

DRO	Diesel-range organics	PAH	Polycyclic aromatic hydrocarbon
FD	Field duplicate	RCRA	Resource Conservation and Recovery Act
GRO	Gasoline-range organics	TPH	Total petroleum hydrocarbons
ID	Identification	VOC	Volatile organic compound
NA	Not applicable	°N	Degrees north
ORO	Oil-range organics	°W	Degrees west

On September 13, 2018, 25 soil samples (including two field duplicates), two groundwater samples (including one field duplicate), one equipment rinsate blank, and one field blank were submitted via FedEx to the Test America laboratory in Nashville, Tennessee, for arrival on September 14, 2018.

**3.4 DEVIATIONS FROM THE QAPP**

The approved QAPP specified collection of groundwater samples in addition to soil samples at each boring location. However, no groundwater samples were collected at SB-1, SB-2, SB-4, SB-5, SB-6, SB-7, SB-8, and SB-9 due to geologic refusal above the depth of groundwater. Another deviation from the QAPP was use of a peristaltic pump to collect the groundwater samples instead of a check valve. Another deviation was inclusion of mercury as an analyte with the other seven RCRA metals. These deviations are not expected to adversely affect results of the investigation.

The approved QAPP specified bulk collection of suspect ACBM to be submitted to a START-contracted laboratory for analysis for asbestos. In addition, paint-covered surfaces were to be screened for lead by use of an x-ray fluorescence (XRF) spectrometer to assess presence and determine quantity of LBP. However, contacts with the owner were unsuccessful to gain access for asbestos sampling and the LBP survey. Recommendation is to complete asbestos sampling and an LBP survey prior to any renovation or demolition of the restaurant and/or storage outbuilding.

## 4.0 PRESENTATION AND EVALUATION OF RESULTS

Section 4.0 discusses analytical results from samples collected during Phase II activities in September 2018. A copy of the analytical report provided by Test America, the associated chain-of-custody record, and a data validation report prepared by START are in Appendix E.

### 4.1 SURFACE SOIL SAMPLES

In Appendix F, Table F-1 summarizes laboratory results from surface soil samples analyzed for this investigation and compares the data to Missouri Department of Natural Resources (MDNR) Risk-Based Corrective Action (MRBCA) Lowest Default Target Levels (LDTL) and MRBCA Tier 1 residential and non-residential land use, soil type 3, Risk-based Target Levels (RBTL) for inhalation (vapor emissions and particulates), and dermal contact. All surface soil samples contained at least one VOC at a concentration above the laboratory reporting limit. No sample contained a VOC at a concentration above an LDTL. All surface soil samples except SS-2 and SS-2-FD contained at least one PAH at a concentration above a laboratory reporting limit. Sample SS-5 contained benzo[a]pyrene at a concentration of 0.738 milligrams per kilogram (mg/kg), exceeding the LDTL and the residential RBTL, both at 0.620 mg/kg.

All surface soil samples except SS-1 contained at least one TPH concentration above the laboratory reporting limit. No sample contained TPH at a concentration above the LDTL.

All surface soil samples contained concentrations of arsenic, barium, chromium, and lead above laboratory reporting limits, except SS-5, which was non-detect for arsenic. Additionally, all results for lead, except in SS-2-FD and SS-5, exceeded the LDTL, and arsenic was detected at concentrations above the LDTL and the residential RBTL in all samples except SS-5; however, those concentrations were comparable to naturally occurring surface soil concentrations within St. Louis County, Missouri. Detected arsenic concentrations in site surface soil samples ranged from 5.98 to 10.2 mg/kg; the LDTL and residential RBTL for arsenic is 3.89 mg/kg, and USGS reports typical arsenic concentrations in St. Louis County soils range from 4.091 to 17.435 mg/kg, with a mean of 10.561 mg/kg. Detected lead concentrations in site surface soil samples ranged from 1.75 to 19.3 mg/kg; the LDTL for lead is 3.74 mg/kg, and USGS reports typical lead concentrations in St. Louis County soils range from 15.241 to 118.770 mg/kg, with a mean of 40.950 mg/kg (USGS 2018). No other metal was detected at a concentration exceeding an LDTL.

No other surface soil sample analyte concentration exceeded an RBTL. A full analytical report of all soil sample results is in Appendix E.

#### **4.2 SUBSURFACE SOIL SAMPLES**

In Appendix F, Table F-2 summarizes laboratory results from subsurface soil samples analyzed for this investigation and compares the data to MRBCA LDTLs and MRBCA Tier 1 residential and non-residential land use, soil type 3, RBTLs for indoor inhalation of vapor emissions. Nine of the 19 subsurface soil samples contained at least one VOC at a concentration above the laboratory reporting limit. No sample contained a VOC at a concentration above an LDTL. Two subsurface soil samples—SB-2 (0-2) and SB-5 (0-2)—contained at least one PAH at concentration above a laboratory reporting limit. No sample contained a PAH at a concentration above the LDTL.

None of the 19 subsurface soil samples contained TPH levels above the laboratory reporting limit. No sample contained TPH at a concentration above the LDTL.

All subsurface soil samples contained concentrations of arsenic, barium, and chromium above laboratory reporting limits. All subsurface soil samples except SB-7 (11-13), SB-8 (7-9), SB-8 (9-11), SB-9 (7-9), and SB-9 (10-12) contained concentrations of lead above laboratory reporting limits. Additionally, all detected results for lead exceeded the LDTL, and 17 of the 19 sample results for arsenic exceeded the LDTL; however, those concentrations were comparable to naturally occurring surface soil concentrations within St. Louis County, Missouri. Arsenic concentrations in site subsurface soil samples ranged from 3.28 to 15.8 mg/kg; the LDTL for arsenic is 3.89 mg/kg, and USGS reports typical arsenic concentrations in St. Louis County soils range from 4.091 to 17.435 mg/kg, with a mean of 10.561 mg/kg. Detected lead concentrations in the subsurface soil samples ranged from 32.9 to 106 mg/kg; the LDTL for lead is 3.74 mg/kg, and USGS reports typical lead concentrations in St. Louis County soils range from 15.241 to 118.770 mg/kg, with a mean of 40.950 mg/kg (USGS 2018). No other metal was detected at concentration exceeding an LDTL.

No subsurface soil sample analyte concentration exceeded an RBTL. A full analytical report of all soil sample results is in Appendix E.

#### **4.3 GROUNDWATER SAMPLES**

In Appendix F, Table F-3 summarizes laboratory results from groundwater samples analyzed for this investigation and compares the data to MRBCA LDTLs and RBTLs. Two groundwater samples (GW-3 and GW-3-FD) were collected at one soil boring location (SB-3). Acetone and chloromethane, which are

laboratory contaminants, were detected in sample GW-3; acetone was detected in GW-3-FD. Neither groundwater sample contained a site-related VOC at a concentration above a laboratory reporting limit or an LDTL.

Neither groundwater sample contained a detectable PAH or TPH concentration.

Sample number GW-3 contained arsenic, barium, chromium, lead, and selenium at concentrations above laboratory reporting limits. Sample number GW-3-FD contained barium, chromium, and selenium at concentrations above laboratory reporting limits. Neither sample contained a RCRA metal at a concentration above an LDTL.

In no groundwater sample did an analyte concentration exceed an RBTL. A full analytical report is in Appendix E.

#### 4.4 QUALITY CONTROL SAMPLES

Results from soil and groundwater duplicate samples listed in Appendix F, Tables F-1, F-2, and F-3 indicated no major variances in method precision. Acetone and chromium were detected in the equipment rinsate blank and field blank at concentrations greater than method detection limits, but less than laboratory reporting limits. Trichlorofluoromethane and barium were detected in the equipment rinsate blank at concentrations greater than method detection limits, but less than laboratory reporting limits. Chloromethane was detected in the equipment rinsate blank at a concentration greater than the method detection limit, but less than the laboratory reporting limit. Chloromethane was detected in the field blank at a concentration above the laboratory reporting limit, at 1.97 micrograms per liter ( $\mu\text{g/L}$ ). Chloromethane results from both blanks were well below the LDTL of 18.3  $\mu\text{g/L}$ .

## 5.0 DISCUSSION OF FINDINGS AND CONCLUSIONS

In September 2018, START conducted a Phase II TBA at the site after a Phase I TBA by Tetra Tech in June 2018 had identified the following findings and opinions:

- Review of city directories identified the site address (9947 W Florissant Ave.) as an AutoZone from 2001 to at least as late as 2010. Improvements at the site were destroyed by fire in November 2014 due to civil unrest. Possible fill and grading associated with the fire at the former AutoZone property poses a REC to the site.
- Review of historical documents revealed that the New York Grill (9901 W Florissant Ave.) was built in 1978. LBP and ACBM were likely used in construction of the restaurant.
- Tetra Tech completed a Tier 1 non-invasive vapor encroachment screen of the site. Even though the site is not listed on the vapor encroachment screen, a VEC is posed to the site based on possible presence of soil and groundwater contamination because the site hosted an AutoZone that burned down during civil unrest. This poses a REC to the site.

START members Ann Marie Pohlman and Jenna Pratt completed Phase II TBA sampling activities on September 11 and 12, 2018. Nine soil borings were advanced by Tetra Tech subcontractor, Bulldog Drilling. Soil borings were screened by use of a PID, and two soil samples were collected from each boring based on screening results and judgment of field personnel. One groundwater sample was collected at one of the nine boring locations (SB-3). Samples were submitted to Test America via FedEx (on September 13, 2018), and analyzed for VOCs, TPH-GRO, TPH-DRO, TPH-ORO, PAHs, and RCRA total metals (including mercury).

Results from surface soil samples were compared to MRBCA LDTLs and MRBCA Tier 1 residential and non-residential land use, soil type 3, RBTLs for inhalation (vapor emissions and particulates), and dermal contact. All six surface soil samples contained at least one VOC at a concentration above the laboratory reporting limit. No sample contained a VOC at a concentration above an LDTL. Four surface soil samples contained at least one PAH at a concentration above a laboratory reporting limit. One sample contained a benzo[a]pyrene concentration exceeding the LDTL and the residential RBTL. Five surface soil samples contained at least one TPH level above the laboratory reporting limit. No sample contained TPH at a concentration above an LDTL. Five surface soil samples contained arsenic, barium, chromium, and lead concentrations above laboratory reporting limits. Additionally, four surface soil sample results exceeded the LDTL for lead, and five sample results exceeded the LDTL and residential RBTL for arsenic; however, those lead and arsenic concentrations were comparable to naturally occurring surface soil concentrations within St. Louis County, Missouri.

Results from subsurface soil samples were compared to MRBCA LDTLs and MRBCA Tier 1 residential and non-residential land use, soil type 3, RBTLs for indoor inhalation of vapor emissions. Nine of the 19 subsurface soil samples contained at least one VOC at a concentration above the laboratory reporting limit. No sample contained a VOC at a concentration above an LDTL. Two subsurface soil samples contained at least one PAH at a concentration above a laboratory reporting limit. No sample contained a PAH at a concentration above an LDTL. None of the 19 subsurface soil samples contained TPH levels above the laboratory reporting limit, and no sample contained TPH at a concentration above the LDTL. All subsurface soil samples contained concentrations of arsenic, barium, and chromium above laboratory reporting limits. Fourteen of 19 subsurface soil samples contained concentrations of lead above laboratory reporting limits. Additionally, all detected results for lead exceeded the LDTL, and 17 of the 19 sample results for arsenic exceeded the LDTL; however, those lead and arsenic concentrations were comparable to naturally occurring surface soil concentrations within St. Louis County, Missouri. No subsurface soil sample analyte concentration exceeded an RBTL.

Results from groundwater samples were compared to MRBCA LDTLs and RBTLs. Two groundwater samples were collected at one soil boring location on site. Acetone and chloromethane, which are laboratory contaminants, were detected in sample GW-3; acetone was detected in GW-3-FD. Neither groundwater sample contained a VOC at a concentration above a laboratory reporting limit or an LDTL. Neither groundwater sample contained detectable PAH or TPH concentrations. Sample number GW-3 contained arsenic, barium, chromium, lead, and selenium at concentrations above laboratory reporting limits. Sample number GW-3-FD contained barium, chromium, and selenium at concentrations above laboratory reporting limits. Neither sample contained a RCRA metal at concentration above an LDTL. In no groundwater sample did an analyte concentration exceed an RBTL.

No analyte concentration in subsurface soil or groundwater samples exceeded an RBTL. The benzo[a]pyrene concentration exceeded the LDTL and residential RBTL in surface soil sample SS-5.

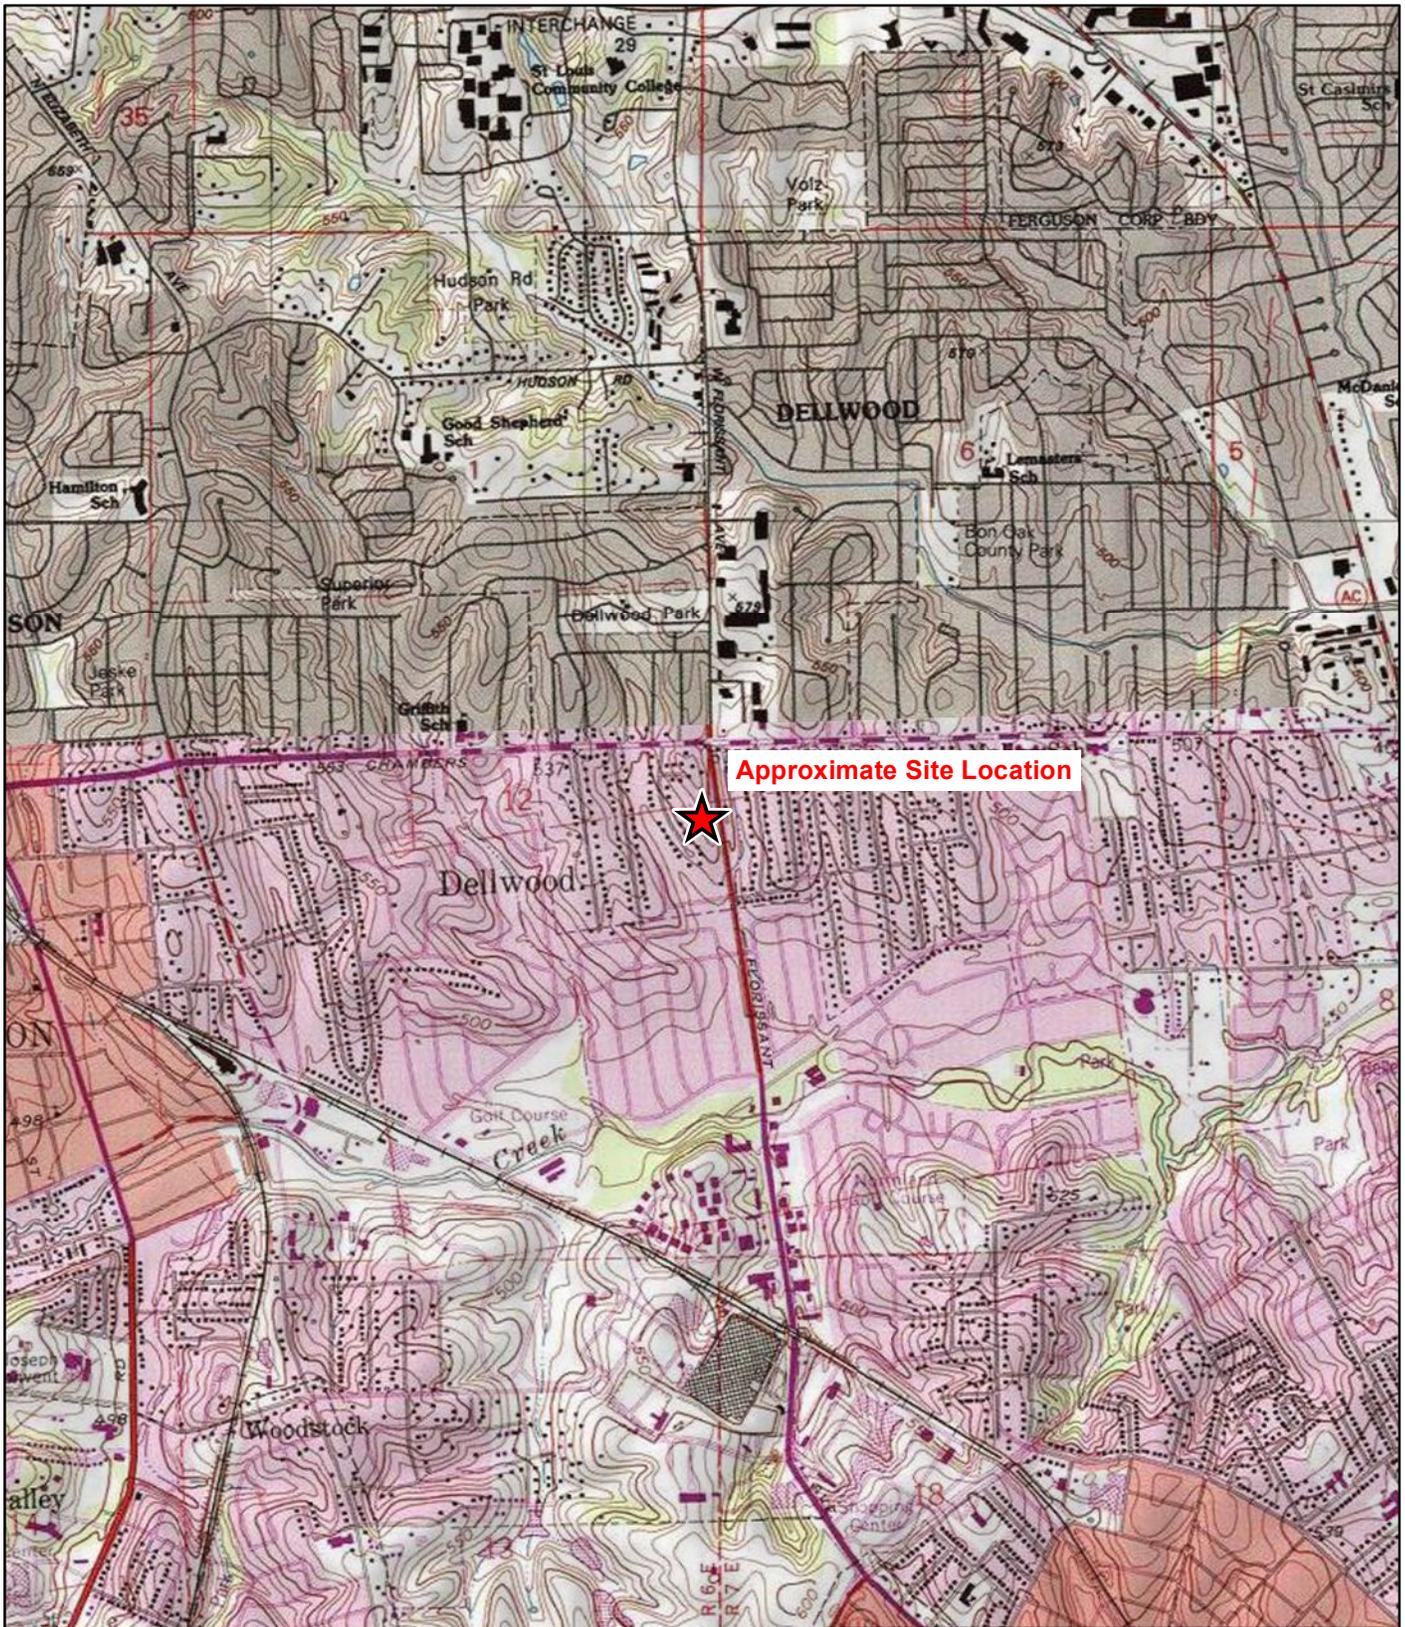

Analytical results indicate detection of analytes at the former AutoZone site. However, follow-up action appears unwarranted to address subsurface soil and groundwater contamination because no analyte concentration in subsurface soil and groundwater samples exceeded an RBTL. The benzo[a]pyrene concentration exceeded the residential RBTL in surface soil sample SS-5, collected at 9901 West Florissant Avenue (New York Grill). If future use of this portion of the site is to be for residential purposes, additional sampling is recommended. Further, asbestos sampling and an LBP survey should be completed prior to any renovation or demolition of the restaurant and/or storage outbuilding.

0753 START Pohlman at Fenton office. Print HASP and QAPP, pick up supplies needed for the project.

0951 Go to EPA to pick up PID, water level indicator and gloves.

1030 At Wal-Mart to pick up supplies - first aid kit, eyewash solution, and Sharpies.

1130 At Fenton office. Go through coolers and get supplies needed for sampling this week. Send START Jenna Pratt QAPP and HASP. Earlier, Pat with the St. Louis Economic Development Partnership called and stated the owner of vacant lot (former Autozone) is renting the space to Missouri American Water Company. Pat is going out later today to send me pictures of the lot.

1415 Fax AMP START Pohlman receives text pictures from Pat of the lot of former Autozone; vehicles, equipment, and other miscellaneous items are located on the lot, but is still accessible and sampleable. START will work around items to perform geoprobe sampling this week. Pat is unsure if owner will allow access for asbestos and LSP survey on Thursday. Pat will let me know by mid-day tomorrow. Load truck with all sampling supplies.

1550 End day at Fenton office. Unload truck at home.

9-10-18

*John Pohlman*

CLASS SCHEDULE

- former Autozone 103X 902514 0002.655 9-11-18
- 0743 Bulldog Drilling operator called START Pohlman to site say he is stuck in traffic and will be late.
- 0748 START Pohlman at 9947 W. Pleasant Ave. (Former Autozone site). Heavy equipment, pipes, and trucks are located on-site.
- 0759 START Pratt on site. Get ice and wait for drillers to arrive.
- 0900 Bulldog Drilling on site. Have START Pratt and Bulldog Drilling workers (Josh Edwards and Joe Shawn Goy.) review and sign HAZOP. Do tailgate Safety meeting also.
- 0928 Start SB-1. PID readings 0.0 ppb at all depths. Refusal at 27 feet bgs. Collected samples from 3 to 5 feet and 17 to 19 feet depths. No groundwater encountered; no groundwater sample collected. GPS Coordinates: ~~38.7476, -90.2801~~ 38.747637, -90.280406
- 1120 Start SB-2. PID readings 0.0 ppb at all depths. Refusal at 26.5 feet bgs. Collected samples from 0 to 2 feet and 11-13 feet depths. No groundwater encountered; no groundwater sample collected. GPS Coordinates: ~~38.7474, -90.2805~~ 38.747407, -90.280502
- 1210 Lunch
- 1235 Start SB-3. PID readings 0.0 ppb at all depths. Depth to refusal is 28.5 feet bgs. Collect samples at 0-2 feet and 21-23 feet depths. When putting dirt back down hole, START Pratt heard water. START Pohlman retrieved water level indicator and depth to groundwater is 15 feet, 8 inches. Bulldog Drilling installed temporary well and to let recharge for 24 hours. Will collect groundwater sample tomorrow. Bottom of well set is at 28.5 feet bgs. Driller stated about leeches of water in well. Will let set overnight to recharge.
- 1354 Start SB-4; PID readings 0.0 ppb at all depths. Depth to refusal is 19.5 feet bgs. Collected samples at 5-7 feet and

Former Auto Zone 603x9025140002.055 9-11-18

9-11 feet depth intervals GPS coordinates: 38.74745° - 90.279926

No groundwater encountered; no groundwater sample collected.

1440 Start SB-5; PID readings 0.0 ppb on all depths. Depth to refusal is 20 feet bgs. Collected samples at 0-2 feet and 18-20 feet depths. No groundwater encountered; no groundwater sample collected. GPS coordinates: ~~38.7476, -90.2799~~ 38.747593, -90.279879

After this location, Bulldog Drilling off site for the day. Will return tomorrow at 0800.

1538 Begin sample collection of SS-1. GPS coordinates: 38.7474, 38.747358, -90.2805, -90.2805. Collect sample at 1545.

1620 Begin sample collection of SS-2. Collect sample at 1620. Collect duplicate sample also SS-2-PD. GPS coordinates: 38.747198, 38.7475 and -90.2802. Go to Quick Trip and get ice. -90.280190

1650 START Pohlman and Kraft off-site and end day. Start Pohlman unloads vehicle and charges PID once home.

9-11-18

*[Handwritten signature]*

Former Autozone 103X 9025140002.055 9-12-19

0802 START Pohlman and Krutt on site. STREET Pohlman slips on way to site to get ice. Bulldog Drilling on site. Get ready and set up.

0835 Do tailgate Safety meeting.

0838 Start SB-6. PID readings 0.0 ppb at all depths. Depth to refusal is 24.5 feet bgs. Collect samples at 2-4 feet and 22-24 feet ~~into~~ depths. No groundwater encountered; no groundwater sample collected. GPS coordinates: ~~38.7472, -90.2805~~ or 38.747188, -90.280473

0932 Start SB-7; PID readings 0.0 ppb at all depths. Depth to refusal at 20 feet bgs. Collect samples at 0-2 feet, duplicate sample 0-2 feet (SB-7-PD) and 11-13 feet depths. No groundwater encountered; no groundwater sample collected. GPS coordinates: ~~38.7478, -90.2799~~ or 38.7472, -90.2799

1016 Start SB-8; PID readings 0.0 ppb at all depths. Depth to refusal is 24.5 feet bgs. Collect samples at 7-9 feet and 9-11 feet depths. No groundwater encountered; no groundwater sample collected. Finish at 1036. Performed bump test earlier this morning and air on PID and Vols were read; unit is working ok. Unit was calibrated on 9-10-19. GPS coordinates: ~~38.7470, -90.2803~~ or 38.746956, -90.280345

1129 Start SB-9. PID readings 0.0 ppb at all depths. Depth to refusal is 19 feet bgs. Collect samples at 7-9 and 10-12 feet depths. No groundwater encountered; no groundwater sample collected. GPS coordinates: ~~38.7470, -90.2798~~ or 38.746998, -90.279766

1215 Lunch

1245 Get ready to sample GW-3.

1307 Begin purging GW-3 location with G3 pump. Pump is really slow and water is really dirty. Well is not recharging fast.

Former Auto Zone 103X 9025 14.0002.055 9-12-18

1334 Collect equipment rinse & blank sample

1340 Collect SS-03. ~~GPS coordinates: 38.74731, -90.2801 AM~~

1400 Collect SS-04. ~~GPS coordinates: 38.7470, -90.2803 AM~~

1415 Collect SS-05. ~~GPS coordinates: 38.7470, -90.2798 AM~~

1424 Collect GW-3 and GW-3-FD (field duplicate) samples after purging 1 gallon of water. Water is cloudy, not clear.

1512 Collect FB sample.

1550 At Quik Trip. Buy ice and ice down samples.

1625 START Pohlman and Pratt off site. End day.

GPS coordinates of SS-03: 38.747275, -90.280084

GPS coordinates of SS-04: 38.746958, -90.280337

GPS coordinates of SS-05: 38.746997, -90.279777

9-12-18

Ann  
Pohlman

Former Antizone 103X9025140002.055 9-13-18

0806 START Pohlman at QuikTrip in Fenton to buy ice to ship samples today.

0815 START Pohlman at Fenton office to ship samples to Test America today for Project #: 49014172. START Pohlman labeled and taped all soil samples, checked water samples and filled out Chain of custody for all samples. START Pohlman cleaned out truck full of supplies and left them at Tetra Tech office. Will need to put supplies away and take PID and water level indicator to UPA on Monday.

1600 Drop samples off at Fed-EX in Fenton to ship to Test America in Nashville, TN. End day.

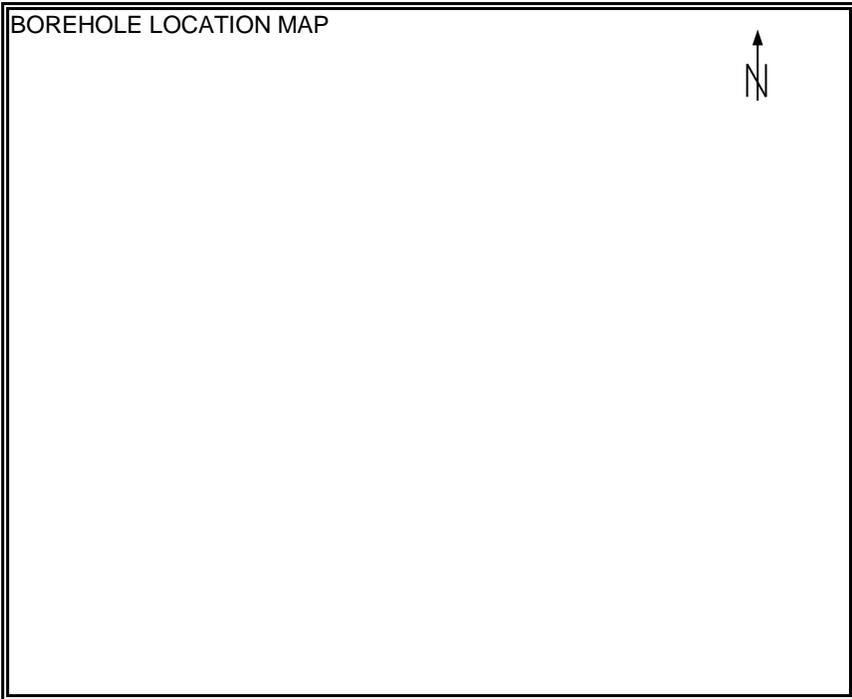

*John*  
9-13-18

## Narrative

### Job Narrative 490-159244-1

#### Comments

No additional comments.

#### Receipt

The samples were received on 9/14/2018 10:20 AM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperature of the cooler at receipt was 3.6° C.

#### Receipt Exceptions

1 SOBI vial broken in lab - SB-2 0-2' (490-159244-7)

#### GC/MS VOA

Method(s) 8260B: The method blank for analytical batch 490-543507 contained Acetone above the method detection limit. This target analyte concentration was less than half the reporting limit (1/2RL); therefore, re-extraction or re-analysis of samples was not performed.

Method(s) 8260B: Insufficient sample volume was available to perform a matrix spike/matrix spike duplicate (MS/MSD) associated with analytical batch 490-544809.

Method(s) 8260B: Insufficient sample volume was available to perform a matrix spike/matrix spike duplicate (MS/MSD) associated with analytical batch 490-544990.

Method(s) 8260B: The laboratory control sample (LCS) for analytical batch 490-545407 recovered outside control limits for the following analytes: trans-1,2-Dichloroethene. These analytes were biased high in the LCS and were not detected in the associated samples; therefore, the data have been reported.

Method(s) 8260B: The laboratory control sample duplicate (LCSD) for analytical batch 490-545407 recovered outside control limits for the following analytes: 1,2-Dichlorobenzene, 1,3-Dichlorobenzene and 1,4-Dichlorobenzene. These analytes were not reported from the associated samples.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

#### GC/MS Semi VOA

Method(s) 8270C: Insufficient sample volume was available to perform a matrix spike/matrix spike duplicate (MS/MSD) associated with preparation batch 490-543591 and analytical batch 490-543785.

Method(s) 8270C: Surrogate recovery for the following sample was outside the upper control limit: SB-6 2-4' (490-159244-15). This sample did not contain any target analytes; therefore, re-extraction and/or re-analysis was not performed.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

#### Metals

Method(s) 6020A: The method blank for 490-543559 contained Chromium above the method detection limit (MDL). Associated samples were not re-analyzed because results were less than the reporting limit (RL) OR practical quantitation limit (PQL).

Method(s) 6020A: The continuing calibration verification (CCV) associated with batch 490-544895 recovered above the upper control limit for Chromium. The samples associated with this CCV were Batch QC for the affected analytes and passed; therefore, the data have been reported. The following samples are impacted: (LCS 490-543559/2-A), (LCSD 490-543559/3-A), (MB 490-543559/1-A)

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

#### Organic Prep

No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

## Qualifiers

### GC/MS VOA

Qualifier	Qualifier Description
B	Compound was found in the blank and sample.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
*	LCS or LCSD is outside acceptance limits.

### GC/MS Semi VOA

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

### Metals

Qualifier	Qualifier Description
B	Compound was found in the blank and sample.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
F1	MS and/or MSD Recovery is outside acceptance limits.
^	ICV,CCV,ICB,CCB, ISA, ISB, CRI, CRA, DLCK or MRL standard: Instrument related QC is outside acceptance limits.

## Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
α	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

## COOLER RECEIPT FORM

Cooler Received/Opened On 09-14-2018 @ 10:20

Time Samples Removed From Cooler 17:10 Time Samples Placed In Storage 17:40 (2 Hour Window)

1. Tracking # 8867 (last 4 digits, FedEx) Courier: FedEx  
IR Gun ID 14740456 pH Strip Lot N/A Chlorine Strip Lot N/A 040518K KD 09-14-2018  
2. Temperature of rep. sample or temp blank when opened: 31.6 Degrees Celsius

3. If Item #2 temperature is 0°C or less, was the representative sample or temp blank frozen? YES NO... NA

4. Were custody seals on outside of cooler? YES...NO... NA

If yes, how many and where: 1 (front)

5. Were the seals intact, signed, and dated correctly? YES...NO... NA

6. Were custody papers inside cooler? YES...NO... NA

I certify that I opened the cooler and answered questions 1-6 (initial) KD

7. Were custody seals on containers: YES  NO and intact YES...NO... NA

Were these signed and dated correctly? YES...NO... NA

8. Packing mat'l used?  Bubblewrap  Plastic bag  Peanuts  Vermiculite  Foam Insert  Paper  Other None

9. Cooling process:  Ice  Ice-pack  Ice (direct contact)  Dry ice  Other None

10. Did all containers arrive in good condition (unbroken)? YES...NO... NA

11. Were all container labels complete (#, date, signed, pres., etc)? YES...NO... NA

12. Did all container labels and tags agree with custody papers? YES...NO... NA

13a. Were VOA vials received? YES...NO... NA

b. Was there any observable headspace present in any VOA vial? YES... NO...NA

14. Was there a Trip Blank in this cooler? YES... NO...NA If multiple coolers, sequence # \_\_\_\_\_

I certify that I unloaded the cooler and answered questions 7-14 (initial) KD

15a. On pres'd bottles, did pH test strips suggest preservation reached the correct pH level? YES...NO... NA

b. Did the bottle labels indicate that the correct preservatives were used YES...NO... NA

16. Was residual chlorine present? YES... NO...NA

I certify that I checked for chlorine and pH as per SOP and answered questions 15-16 (initial) KD

17. Were custody papers properly filled out (ink, signed, etc)? YES...NO... NA

18. Did you sign the custody papers in the appropriate place? YES...NO... NA

19. Were correct containers used for the analysis requested? YES...NO... NA

20. Was sufficient amount of sample sent in each container? YES...NO... NA

I certify that I entered this project into LIMS and answered questions 17-20 (initial) KD

I certify that I attached a label with the unique LIMS number to each container (initial) KD

21. Were there Non-Conformance issues at login? YES... NO... Was a NCM generated? YES... NO...# \_\_\_\_\_

11. Were all container labels complete (#, date, signed, pres., etc)? YES...NO...NA YES

12. Did all container labels and tags agree with custody papers? YES...NO...NA YES

13a. Were VOA vials received? YES...NO...NA NO

b. Was there any observable headspace present in any VOA vial? YES...NO...NA NA

Larger than this.

14. Was there a Trip Blank in this cooler? YES...NO...NA NO If multiple coolers, sequence # \_\_\_\_\_

I certify that I unloaded the cooler and answered questions 7-14 (initial) KD

15a. On pres'd bottles, did pH test strips suggest preservation reached the correct pH level? YES...NO...NA NA

b. Did the bottle labels indicate that the correct preservatives were used YES...NO...NA YES

16. Was residual chlorine present? YES...NO...NA NA

I certify that I checked for chlorine and pH as per SOP and answered questions 15-16 (initial) KD

17. Were custody papers properly filled out (ink, signed, etc)? YES...NO...NA YES

18. Did you sign the custody papers in the appropriate place? YES...NO...NA YES

19. Were correct containers used for the analysis requested? YES...NO...NA YES

20. Was sufficient amount of sample sent in each container? YES...NO...NA YES

I certify that I entered this project into LIMS and answered questions 17-20 (initial) KD

I certify that I attached a label with the unique LIMS number to each container (initial) KD

21. Were there Non-Conformance issues at login? YES...NO...NA NO Was a NCM generated? YES...NO...NA NO

## COOLER RECEIPT FORM

Cooler Received/Opened On 9/14/2018 @ 1020

Time Samples Removed From Cooler 17:10 Time Samples Placed In Storage 17:40 (2 Hour Window)

1. Tracking # 8878 (last 4 digits, FedEx) Courier: FedEx  
IR Gun ID 17610176 pH Strip Lot N/A Chlorine Strip Lot N/A

2. Temperature of rep. sample or temp blank when opened: 4.6 Degrees Celsius

3. If Item #2 temperature is 0°C or less, was the representative sample or temp blank frozen? YES NO...NA

4. Were custody seals on outside of cooler? YES...NO...NA

If yes, how many and where: 1 (Front)

5. Were the seals intact, signed, and dated correctly? YES...NO...NA

6. Were custody papers inside cooler? YES...NO...NA

I certify that I opened the cooler and answered questions 1-6 (initial) 2.2

7. Were custody seals on containers: YES NO and Intact YES...NO...NA

Were these signed and dated correctly? YES...NO...NA

8. Packing mat'l used? Bubblewrap Plastic bag Peanuts Vermiculite Foam Insert Paper Other None

9. Cooling process: Ice Ice-pack Ice (direct contact) Dry ice Other None

10. Did all containers arrive in good condition (unbroken)? YES...NO...NA

11. Were all container labels complete (#, date, signed, pres., etc)? YES...NO...NA

12. Did all container labels and tags agree with custody papers? YES...NO...NA

13a. Were VOA vials received? YES...NO...NA

b. Was there any observable headspace present in any VOA vial? YES...NO...NA

Larger than this.

14. Was there a Trip Blank in this cooler? YES...NO...NA If multiple coolers, sequence # KD

I certify that I unloaded the cooler and answered questions 7-14 (initial) KD

15a. On pres'd bottles, did pH test strips suggest preservation reached the correct pH level? YES...NO...NA

b. Did the bottle labels indicate that the correct preservatives were used YES...NO...NA

16. Was residual chlorine present? YES...NO...NA

I certify that I checked for chlorine and pH as per SOP and answered questions 15-16 (initial) KD

17. Were custody papers properly filled out (ink, signed, etc)? YES...NO...NA

18. Did you sign the custody papers in the appropriate place? YES...NO...NA

19. Were correct containers used for the analysis requested? YES...NO...NA

20. Was sufficient amount of sample sent in each container? YES...NO...NA

I certify that I entered this project into LIMS and answered questions 17-20 (initial) KD

I certify that I attached a label with the unique LIMS number to each container (initial) KD

21. Were there Non-Conformance issues at login? YES...NO... Was a NCM generated? YES...NO...#

**Tetra Tech, Inc.**  
**DATA VALIDATION REPORT**  
**LEVEL II**

Site: Former Auto Zone Site

Laboratory: TestAmerica Laboratories (Nashville, Tennessee)

Data Reviewer: Harry Ellis, Tetra Tech, Inc. (Tetra Tech)

Review Date: October 10, 2018

Sample Delivery Group (SDG): J159244

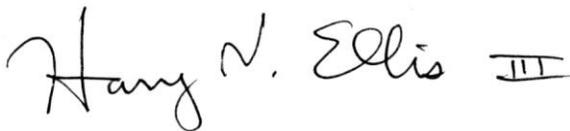

Sample Numbers: SB-1 3-5', SB-1 17-19', SB-2 0-2', SB-2 11-13', SB-3 0-2', SB-3 21-23', SB-4 5-7', SB-4 9-11', SB-5 0-2', SB-5 18-20', SB-6 2-4', SB-6 22-24', SB-7 0-2', SB-7-FD 0-2', SB-7 11-13', SB-8 7-9', SB-8 9-11', SB-9 7-9', SB-9 10-12', SS-1, SS-2, SS-2-FD, SS-03, SS-04, SS-05, GW-3, GW-3-FD, RB, and FB

Matrix / Number of Samples: Twenty-three Soil Samples, one Water Sample, Three Field Duplicates and Two Blank Samples

The data were qualified according to the U.S. Environmental Protection Agency (EPA) Region 7 documents entitled "Contract Laboratory Program National Functional Guidelines for Superfund Organic Methods Data Review", dated January 2017, and "Contract Laboratory Program National Functional Guidelines for Superfund Inorganic Methods Data Review", also dated January 2017. In addition, the Tetra Tech document "Review of Data Packages from Subcontracted Laboratories" (February 2002) was used along with other criteria specified in the applicable methods.

The review was intended to identify problems and quality control (QC) deficiencies that were readily apparent from the summary data package. The following sections discuss any problems or deficiencies that were found, and data qualifications applied because of non-compliant QC. The data review was limited to the available field and laboratory QC information submitted with the project-specific data package.

I, Harry Ellis, certify that all data validation criteria outlined in the above-referenced documents were assessed, and any qualifications made to the data accorded with those documents.

10 October 2018

## DATA VALIDATION QUALIFIERS

- U** — The analyte was not detected above the reported sample quantitation limit.
- J** — The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte in the sample.
- UJ** — The analyte was not detected above the reported sample quantitation limit, which is estimated.
- R** — The sample results are rejected due to serious deficiencies in the ability to analyze the sample and meet QC criteria. Presence or absence of the analyte cannot be verified.

## DATA ASSESSMENT

Sample delivery group (SDG) J159244 included twenty-three (23) environmental soil samples, one (1) environmental groundwater sample, and five (4) quality control (QC) samples (two soil field duplicates, one groundwater field duplicate, one rinsate blank and one field blank). Samples were analyzed for volatile organic compounds (VOC) by EPA SW-846 Method 8260B, polynuclear aromatic hydrocarbons (PAH) by EPA SW-846 Method 8270C, total petroleum hydrocarbons (TPH) as gasoline range organics (GRO), diesel range organics (DRO), and oil range organics (ORO) by EPA SW-846 Methods 8260B and 8270C, and metals by EPA SW-846 Methods 6020A, 7470A, and 7471B. The following summarizes the data validation that was performed.

### VOLATILE ORGANIC COMPOUND ANALYSES

#### I. Holding Time and Chain of Custody (COC) Requirements

The samples were received by the laboratory and analyzed within the established holding time of 14 days from sample collection to analysis. No data were qualified.

#### II. Matrix Spike/Matrix Spike Duplicate (MS/MSD)

Due to insufficient sample volume, no MS/MSD analyses were performed on these samples. Duplicate LCS analyses provided adequate data on precision and accuracy, so no qualifications were applied for this data gap.

#### III. Blanks

The aqueous laboratory (method) blank yielded a low concentration of the common laboratory contaminant acetone. The similar concentrations in the aqueous samples were qualified as artifacts and flagged "U". The soil laboratory blanks yielded no detectable analytes, so no further qualifications were applied.

After those qualifications, the rinsate and field blanks yielded low concentrations of chloromethane (methyl chloride). The only other detection of that analyte, in sample GW-3, was qualified as a handling artifact and flagged "U".

#### IV. Laboratory Control Sample (LCS)

Almost all percent recoveries from the duplicate LCS analyses and all relative percent differences (RPD) were within established control limits. The only exceptions were the dichlorobenzene isomers in one pair of soil LCS. The LCSD recoveries of these analytes were slightly below the acceptable range. However, the LCS recoveries and the average recoveries were within the acceptable range. Therefore no qualifications were applied.

#### V. Surrogates

All surrogate recoveries were within their QC limits. No qualifications were applied.

## VI. Comments

Some detected concentrations were less than their reporting limits (“RL”). These low-concentration results were qualified as estimated (flagged “J”).

Most field duplicate results were reasonably similar. However, in both soil field duplicate pairs the solvents carbon disulfide and toluene yielded excessive differences. Due to these uncertainties as to the true concentrations of these analytes at those location, the concentrations for carbon disulfide and toluene in both soil field duplicate pairs were qualified as estimated and flagged “J”.

## VII. Overall Assessment of Data

Overall data quality is acceptable, with no major qualifications applied. All data are usable as qualified for their intended purposes.

# **POLYNUCLEAR AROMATIC HYDROCARBON ANALYSES**

## I. Holding Time and Chain of Custody (COC) Requirements

The samples were received by the laboratory and analyzed within the established holding time of 14 days from sample collection to extraction and 40 days to analysis. No data were qualified.

## II. Matrix Spike/Matrix Spike Duplicate (MS/MSD)

Due to insufficient sample volume, no MS/MSD analyses were performed. The TPH MS/MSD analyses, which use the same analytical method, yielded acceptable results. No qualifications were applied for these data gaps.

## III. Blanks

The laboratory (method) blank and the field blanks yielded no detectable PAH, so no qualifications ere applied.

## IV. Laboratory Control Sample (LCS)

All percent recoveries from the LCS analyses were within established control limits. No qualifications were applied.

## V. Surrogates

All surrogate recoveries were within QC limits. The exception was one (of three) surrogates in sample GW5. No qualifications were applied.

## VI. Comments

Some detected concentrations were less than their RLs. These low-concentration results were qualified as estimated (flagged “J”).

Field duplicate results were similar, so no qualifications were applied.

## VII. Overall Assessment of Data

Overall data quality is acceptable, with no significant applied. All data are usable as reported for their intended purposes.

### **TOTAL PETROLEUM HYDROCARBON ANALYSES**

#### I. Holding Time and Chain of Custody (COC) Requirements

The samples were received by the laboratory and analyzed within the established holding times. No data were qualified.

#### II. Matrix Spike/Matrix Spike Duplicate (MS/MSD)

All MS/MSD results were within limits. No qualifications were applied.

#### III. Blanks

The laboratory (method) blanks and field blanks yielded no detectable concentrations of TPH, so no qualifications were applied.

#### IV. Laboratory Control Sample (LCS)

All percent recoveries from the LCS analyses were within established control limits. No qualifications were applied.

#### V. Surrogates

All surrogate recoveries were within QC limits. No qualifications were applied.

#### VI. Comments

Some detected concentrations were less than their RLs. These low-concentration results were qualified as estimated (flagged "J").

Field duplicate results were quite similar, so no qualifications were applied.

## VII. Overall Assessment of Data

Overall data quality is acceptable, with few qualifications applied. All data are usable as qualified for their intended purposes.

## METALS ANALYSES

### I. Holding Time and Chain of Custody (COC) Requirements

The samples were received by the laboratory and analyzed within the established holding time of 6 months from sample collection to analysis. No data were qualified.

### II. Matrix Spike/Matrix Spike Duplicate (MS/MSD)

In the MS/MSD analyses performed on sample SB-7 11-13', barium and chromium yielded recoveries above acceptance limits and selenium recoveries below limits. The barium and chromium results may be due to sample heterogeneity or to matrix interference, while the selenium results are due to matrix interference. Due to these irregularities, the results for barium, chromium, and selenium in that sample were qualified as estimated and flagged "J" or "UJ", as appropriate. All other MS/MSD results were within acceptable ranges so no further qualifications were applied.

### III. Blanks

The aqueous laboratory blank yielded low concentrations of barium and chromium. The similar concentrations of these metals in the field blanks were qualified as laboratory artifacts and flagged "U". The groundwater concentrations of barium and chromium were considerably higher than the blank, so no further qualifications were applied. With these qualifications applied, all field and laboratory blank results were nondetected, so no further qualifications were applied.

### IV. Laboratory Control Sample (LCS)

All percent recoveries from the LCS analyses were within established control limits. No qualifications were applied.

### V. Comments

Some detected concentrations (including all for silver) were less than their RLs. These low-concentration results were qualified as estimated (flagged "J").

Almost all field duplicate results were quite similar. The exception was lead in the pair from SS-2, with a more than 10-fold difference in concentrations. Due to this uncertainty in the true concentration of lead at that location, the lead concentrations in both portions of that sample were qualified as estimated and flagged "J".

### VI. Overall Assessment of Data

Overall data quality is acceptable, with no major qualifications applied. All data are usable as qualified for their intended purposes.

Public reporting burden for this collection of information is estimated to average 1.50 hours per response, including the time for reviewing instructions, searching data sources, gathering and maintaining the data needed, and completing and reviewing the collection of information. Send comments regarding this burden estimate, or any other aspect of this collection of information, including suggestions for reducing this burden, to the Environmental Protection Agency, Office of Environmental Information, Code 2822T, Washington, DC 20460 and to the Paperwork Reduction Project, Office of Management and Budget, Washington, DC 20503. DO NOT RETURN your form to either of these addresses. Send your completed form to the address provided by the issuing office.

**PART I- PROPERTY INFORMATION**

**COOPERATIVE AGREEMENT RECIPIENT INFORMATION**

**1. Cooperative Agreement Recipient Name** (State/Tribe for Section 128(a) Cooperative Agreements; requestor/contractor for TBAs):

City of Dellwood

**2. Cooperative Agreement Number** (contract number for TBAs):

**3. What type of cooperative agreement funding is being used for this property?**

- Assessment
- Section 128(a) – State and Tribal Response
- Revolving Loan Fund
- TBA (EPA Regions Only)
- Cleanup

**4. For Assessment, Cleanup, and Revolving Loan Fund cooperative agreements, what type of funding is being used at this property?**

- Hazardous Substance
- Petroleum
- Both

**5a. Indicate if this form is the initial or Updated Form:**

- Initial Form
- Updated Form

**5b. If "Updated Form," what's the ACRES Property ID?**

**PROPERTY BACKGROUND INFORMATION**

**6. Property Name:** Former AutoZone

**7a. Street Address:** 9947 and 9901 West Florissant Avenue **7b. City:** Dellwood

**7c. County:** St. Louis **7d. State:** MO **7e. Zip code:** 63136

**8. Size (in acres):** 1.96 **9. Parcel Number(s):** 11G110942

**STATE & TRIBAL BROWNFIELDS/VOLUNTARY RESPONSE PROGRAM INFORMATION**

**10. State & Tribal Program Enrollment** (If the property is not enrolled in a state program, check Property Not Enrolled check box):

Date of Enrollment: \_\_\_\_\_ ID Number (if applicable): \_\_\_\_\_  Property Not Enrolled in a State or Tribal Program

**PROPERTY GEOGRAPHIC INFORMATION** (EPA Brownfields Program, or its contractors, will provide complete latitude/longitude information if cooperative agreement recipients are unable)

**11a. Latitude**  
(use 00.000000 decimal degree format):

38.74737

**11b. Longitude**  
(use -000.000000 decimal degree format):

-90.280151

**11c. Horizontal Collection Method:**

Global Positioning Method- Unspecified Parameters

**23.** Number of Redevelopment Jobs Leveraged: \_\_\_\_\_

**24.** Future Use and Estimated Acreage (check all that apply; For properties with multi-story buildings only, please indicate also the square footage for each type of reuse (e.g. a three story building with first floor commercial and remaining floors residential).

- Multi-story building
- Greenspace      \_\_\_\_\_ acres      \_\_\_\_\_ sq. ft.       Commercial      \_\_\_\_\_ acres      \_\_\_\_\_ sq. ft.
- Industrial      \_\_\_\_\_ acres      \_\_\_\_\_ sq. ft.       Residential      1.96 acres      \_\_\_\_\_ sq. ft.

**25.** Actual Acreage(s) and Type(s) of Greenspace Created: \_\_\_\_\_ senior living facility

**PART II- ENVIRONMENTAL ACTIVITIES (continued)**

**ANECDOTAL PROPERTY INFORMATION** (as available for all cooperative agreement types)

**26. Property Highlights:**

The site is 1.96-acres and currently consists of a vacant lot and partial concrete parking area (former AutoZone) and an operating restaurant (New York Grill) with an outbuilding and asphalt parking area. Plans for the site include the restaurant and outbuilding being demolished and the property redeveloped into a senior living center. Improvements at the AutoZone were destroyed by fire in 2014. Possible fill and grading associated with the fire pose a REC, and a VEC is posed to the site based on possible presence of soil and groundwater contamination associated with the fire at the former AutoZone. Historical documents revealed that the New York Grill was built in 1978. LBP and ACBM were likely used in construction of the restaurant. During the Phase II TBA, soil sampling results detected PAHs and RCRA metals above MDNR Default Target Levels. In addition, Benzo[a]pyrene was detected above the residential RBTL in one surface soil sample.

**PROPERTY PHOTOGRAPH INFORMATION**

27. Indicate whether photographs are available:  Yes  No 28. Indicate whether video is available:  Yes  No

**PART III- ADDITIONAL PROPERTY INFORMATION**

**PROPERTY HISTORY INFORMATION**

**29. Property Description / History / Past Ownership:**

Historical documentation identifies the site as an AutoZone parts store from 2001 to 2014. The building burned in 2014. New York Grill is still in operation.

**30. Predominant Past Use(s)** (check all that apply; For properties with multi-story buildings only, please indicate also the square footage for each type of reuse (e.g. a three story building with first floor commercial and remaining floors residential):

- Multi-story building
- Greenspace \_\_\_\_\_ acres \_\_\_\_\_ sq. ft.  Commercial 1.96 acres \_\_\_\_\_ sq. ft.
- Residential \_\_\_\_\_ acres \_\_\_\_\_ sq. ft.  Industrial \_\_\_\_\_ acres \_\_\_\_\_ sq. ft.

**OWNERSHIP & SUPERFUND LIABILITY** (Mandatory for Cleanup and RLF Cooperative Agreements)

**31a. Ownership Entity:**

- Government (Tribal, State, Local)  Private

**32a. During the life of the cooperative agreement, did ownership change?**

- Yes  No

**31b. Current Owner:**

\_\_\_\_\_ New York Grill

**32b. If "yes," did Superfund federal landowner liability protections factor into the ownership change?**

- Yes  No  Unknown

**PART IV- APPROVALS**
