

Doug Fox, On-Scene Coordinator
EPA Region III
Philadelphia, PA

and forward key analytical results to the Region.

II. ACTIONS

- A. Guardian continued facility maintenance and boiler operation; pumping water from 700 and 400 as needed and preparing totes for shipping for disposal.
- B. Guardian continued to be prepared for any hazardous materials spill control during dismantlement operations and continues to be on call for after-hours emergencies.
- C. Guardian continued site maintenance and boiler operations week days and also over the weekend.
- D. Guardian and Tetra Tech continued to inspect the waste storage areas containing drums and totes and addressing any leaking containers found.
- E. Guardian loaded 58 totes into 5 trucks, GES (2) and EPA Remedial contractor Black & Veatch (3) for offsite disposal. GES has completed shipment of totes under their disposal contract; they shipped a total of 402 totes under their contract.
- F. Guardian performed weed control around site for maintenance purposes.
- G. Guardian cleaned out of the east carbon filter.
- H. Nine ISO containers of trichlorobenzenes were shipped offsite to enter the stream of commerce.
- I. START continued conducting air monitoring throughout the facility. Volatile organic compounds (VOC's) remained at or below 1.0 parts per million (ppm) at the perimeter of the facility.
- J. START continued maintenance and review of the vessel inventory status, drum database, disposal logs, and analytical database.
- K. Pioneer continued demolition operations and removing process equipment from the plant.

III. FUTURE ACTIVITIES

- A. The OSC will continue to coordinate with the Region and DNREC regarding removal of chemicals from the site. The OSC will continue coordinating with off-site facilities.
- B. START will continue to review data and monitor worker health and safety.
- C. EPA and its contractors will continue to prioritize, plan, and implement future removal activities.
