<sup>1</sup>Radium-226 is assumed to be in equilibrium with Bismuth-214; thus, all radium-226 results are reported as equivalent to bismuth-214 results.

<sup>1</sup>Sample results were obtained utilizing an ORTEC DigiBASE Spectrometry FG-1 System utilizing a 3x3 Sodium Iodide (NaI) scintillator probe (together referred to as Multi-channel Analyzer) and operating with the peak energy window set for bismuth-214, assumed to be in equilibrium with radium-226. Thus, all radium-226 results are reported as equivalent to bismuth-214 results.
