**Subject: Emergency Response Trip Report
 Libby Creek Seep
 Libby, Lincoln County, Montana
 EPA Contract No. 68HE0820D001
 TD No. 63-2101-13**

Dear Mr. Bizyayev:

The Tetra Tech Inc. (Tetra Tech) Superfund Technical Assessment and Response Team (START) is submitting this Emergency Response Trip report generated for the Libby Creek Seep located in Libby, Lincoln County, Montana. This report summarizes field activities conducted at the site during the emergency response. The overall scope of this TDD, monitored by On-Scene Coordinator (OSC) Valeriy Bizyayev, was to provide sampling assistance, analytical services, and documenting on-site conditions with photographs. Specific elements of this TDD included conducting surface water and sediment sampling, generating site figures (Enclosure 1), generating summary of analyte detections (Enclosure 2), and presenting the findings of the validated laboratory data package (Enclosure 3), and maintaining files on the site-specific website.

SITE BACKGROUND

A complaint spill report was filed with Montana's Department of Environmental Quality on January 15, 2021. The complainant submitted photographs and described observing a substance coming out of the ground that had a strong chemical odor and produced a sheen and appeared to be running into Libby Creek. The seep location is near a historical landfill and a superfund site that operated between 1946 and 1969 as a lumber and plywood mill. START was tasked with collecting samples of the substance and provided the findings to determine any hazards it may pose to the human health and the environment.

PHYSICAL LOCATION

The area inspected is in Libby, Montana along the banks of Libby Creek which is a tributary of the Kootenai River. The initial seep complaint was located on the east side bank of Libby Creek at 48.3826125 degrees north latitude and 115.5348681 degrees west longitude (LCS01). Upon further investigation a second similar seep was observed approximately 150 yards downstream on the west side of Libby Creek at 48.3797340 degrees north latitude and 115.5336515 degrees west longitude (LCS02). The seeps seem to originate from the banks and the cause of the seep is unknown at this time. A historical landfill is identified on the east side of Libby Creek and a former lumber mill on the west side of Libby Creek.

EMERGENCY RESPONSE ACTIVITIES

At the request of EPA, Tetra Tech START procured a laboratory and traveled to the site on January 29, 2021, to collect surface water and sediment samples and document site conditions. START member met with EPA Remedial Project Manager (RPM) who directed START to the seep locations. At 1200 the team collected the first water and sediment grab sample (LCS01-SW-01, LCS01-SD-01) at the location identified in the complaint. At 1230, the RPM contacted OSC Bizyayev to report another seep on the west side of Libby Creek downstream approximately 150 yards downstream. The OSC decided to have START collect samples at the second location. The sampling team hiked to the second seep located on the west side of Libby Creek and around 1330 collected a surface water and sediment grab sample (LCS02-SW-01, LCS02-SD-01). Once arriving back to the vehicles, a surface water DRO container was discovered broken, possibly due to the steep bank incline traversed to get to creek access points. An additional sample container was collected before leaving the site and returning to the START office in Helena, Montana.

SAMPLE EXCEPTIONS

All samples were placed on ice after collection and delivery to the lab at around 0900 on Saturday, January 30, 2021. START requested analysis of volatile organic compounds (VOC), gasoline range organics, diesel range organics, semivolatile organic compounds (SVOC), pesticides, ammonia, nitrate, target analyte list metals, and pH.

The sediment samples were not analyzed for VOCs after sample preservation concerns resulting from frozen containers with high moisture content breaking in the laboratory freezer were discussed with OSC Bizyayev. This issue is discussed in the case narrative of the laboratory report.

Due to high moisture in the sediment samples, the lab was requested to dry a portion of the samples and report the true dry weight concentration of arsenic. The arsenic values for the dried aliquots were higher than the wet ones, likely due to variability in moisture across the sample, so the higher, dried values were reported in the summary tables.

ANALYTICAL RESULTS

A summary of detections is presented in enclosure 2. Analytes were screened against EPA removal management levels (RMLs, November 2020), regional screening levels (RSLs, November 2020), and Montana risk-based screening levels (RBSLs, May 2018).

| Analytes Detected Above Screening Levels | |
|--|----------|
| Surface Water | Sediment |
| Arsenic | Arsenic |
| Bis(2-ethylhexyl)phthalate | Iron |

Discrete grab samples were collected in the areas most visibly similar to the impacted area shown in photographs submitted by the complainant on January 15, 2021. They are not representation of the entire seep.

Mr. V. Bizyayev
February 17, 2021
Page 3

With the exception of two samples for total purgeable hydrocarbons that were non-detect for gasoline range organics (GRO), whose surrogate spikes had low recoveries due to interference in the sample matrix, all surrogates and spikes in the data set pass QC advisory limits and the data can be considered of overall high quality.

Please contact me if you have any questions regarding this trip report.

Sincerely,

A handwritten signature in black ink, appearing to read 'Ella Lunny', with a long, sweeping flourish extending to the right.

Ella Lunny

The analyses presented in this report were performed by Energy Laboratories, Inc., 3161 E. Lyndale Ave., Helena, MT 59604, unless otherwise noted. Any exceptions or problems with the analyses are noted in the Laboratory Analytical Report, the QA/QC Summary Report, or the Case Narrative. Any issues encountered during sample receipt are documented in the Work Order Receipt Checklist.

The results as reported relate only to the item(s) submitted for testing. This report shall be used or copied only in its entirety. Energy Laboratories, Inc. is not responsible for the consequences arising from the use of a partial report.

If you have any questions regarding these test results, please contact your Project Manager.

Report Approved By:

CASE NARRATIVE

Tests associated with analyst identified as ELI-B were subcontracted to Energy Laboratories, 1120 S. 27th St., Billings, MT, EPA Number MT00005.

Samples were received 1/30/2021. Upon receipt, one container per sample for VOC analysis was placed in a freezer per client request. Due to the high moisture content in the samples, on Monday when the samples were processed, the containers in the freezer for VOC analysis were found with the glass container broken for LCS01-SD-01 and the lid expanded off the container for LCS02-SD-02. Client was contacted regarding this issue. Per email from Yuen-Chang (Didi) Fung, cancel VOC analysis on the sediment samples due to broken sample containers. abc 2/1/21

All samples were analyzed as-received then moisture corrected based on the percent moisture.

Sample LCS01-SD-01 had a moisture content of 96%. The four sample containers (excluding the broken VOC container) appeared similar in composition. The sample matrix appeared to be very hygroscopic. An aliquot of sample was dried, and the sample was a light, fine particulate.

When digested for metals, the sample was digested using 1 gram of sample. Because of the high percent moisture, the sample was re-digested 2/7/2021, using approximately 5 grams of sample. Per conversation with Yuen-Chang (Didi) Fung 2/9/2021, the dried aliquot of sample was digested to confirm the arsenic value. The report includes the arsenic values for the dry weight corrected analysis, and from the aliquot which was dried, then analyzed. This is designated in the PDF report package with a header of 3050 Extractable Metals-Dried.

| Analyses | Result | Units | Qualifiers | RL | MCL/ QCL | Method | Analysis Date / By |
|----------|--------|-------|------------|----|-------------|--------|--------------------|
|----------|--------|-------|------------|----|-------------|--------|--------------------|

PETROLEUM HYDROCARBONS-VOLATILE

- Gasoline Range Organics(GRO) are defined as all hydrocarbons eluting between 2-Methylpentane and 1,2,4-Trimethylbenzene.
- Total Purgeable Hydrocarbons are defined as the total hydrocarbon responses regardless of elution time.
- S=Surrogate recovery outside QC advisory limits due to sample matrix interference.

PETROLEUM HYDROCARBONS-SEMI-VOLATILE

| | | | | | | | |

PETROLEUM HYDROCARBONS-VOLATILE

- Gasoline Range Organics(GRO) are defined as all hydrocarbons eluting between 2-Methylpentane and 1,2,4-Trimethylbenzene.
- Total Purgeable Hydrocarbons are defined as the total hydrocarbon responses regardless of elution time.
- S=Surrogate recovery outside QC advisory limits due to sample matrix interference.

| Zinc | | 297 | mg/kg-dry | 3.7 | 144 | 75 | 125 | 2.2 | 20 | S | |
| - S= Spike recovery outside of QC advisory limits. The recovery in the Laboratory Control Sample was within QC advisory limits. This suggests that the Matrix Spike recover is due to matrix interference. | | | | | | | | | | | |

Qualifiers:

RL - Analyte Reporting Limit

ND - Not detected at the Reporting Limit (RL)

A - Analyte level was greater than four times the spike level - in accordance with the method, percent recovery is not calculated
N - Analyte concentration was not sufficiently high to calculate a Relative Percent Difference (RPD) for the serial dilution test

- Chain of custody present? Yes No
- Chain of custody signed when relinquished and received? Yes No
- Chain of custody agrees with sample labels? Yes No
- Samples in proper container/bottle? Yes No
- Sample containers intact? Yes No
- Sufficient sample volume for indicated test? Yes No
- All samples received within holding time?
(Exclude analyses that are considered field parameters such as pH, DO, Res Cl, Sulfite, Ferrous Iron, etc.) Yes No
- Temp Blank received in all shipping container(s)/cooler(s)? Yes No Not Applicable
- Container/Temp Blank temperature: °C See Comments
- Water - VOA vials have zero headspace? Yes No No VOA vials submitted
- Water - pH acceptable upon receipt? Yes No Not Applicable

Standard Reporting Procedures:

Lab measurement of analytes considered field parameters that require analysis within 15 minutes of sampling such as pH, Dissolved Oxygen and Residual Chlorine, are qualified as being analyzed outside of recommended holding time.

Solid/soil samples are reported on a wet weight basis (as received) unless specifically indicated. If moisture corrected, data units are typically noted as –dry. For agricultural and mining soil parameters/characteristics, all samples are dried and ground prior to sample analysis.

Radiochemical precision results represent a 2-sigma Total Measurement Uncertainty.

Contact and Corrective Action Comments:

Cooler 1 was received at 3.5 °C, Cooler 2 at 5.4 °C on ice. Sample for Dissolved Metals/Hardness was subsampled, filtered, and preserved to pH <2 with 2 mL of Nitric acid per 250 mL in the laboratory. According to 40CFR136, samples for Dissolved Metals should be filtered and preserved within 15 minutes of collection. 2/1/21 KK
