Subject: Organic Data Validation (S4VEM)
Paint Waste Burial Site
50689 COVL9

This data package consisted of one (1) trip blank analyzed for trace volatile target analytes and twelve (12) soil samples analyzed for volatile target analytes.

Analyses were performed by Chemtex (CHX) according to Contract Laboratory Program (CLP) Statement of Work (SOW) SFAM01.1.

Data were validated according to ICF/ESAT SOP R3QA650 (Standard Operating Procedure for Organic Data Review and Data Validation Report Preparation). Electronic validation was performed by the Electronic Data eXchange & Evaluation System (EXES). The validation report has been assigned the Superfund Data Validation Level Stage_4_Validation_Electronic_Manual (S4VEM).

The following validation narrative is an evaluation of laboratory reported data based on the electronic data package available through the EXES Data Manager dated April 28, 2023 and additional information dated May 5, 2023.

Summary

No significant data quality outliers or technical deficiencies were identified that would require rejection of sample results. Calibration issues and blank contamination required estimation of sample results.

Minor Problems

Chloroethane failed criteria [Percent Difference (%D)] in the initial calibration verification. This analyte was not detected in associated samples. Quantitation limits are estimated and have been qualified "UJ" in affected samples.

An associated storage blank reported a concentration for acetone greater than the Contract Required Quantitation Limit (CRQL). Detected concentrations greater than twice the blank contamination may be estimated high and have been qualified "J+".

Notes

Detected concentrations for target analytes less than CRQLs are estimated and have been qualified "J".

Trip blank COVP1 was free from contamination that would qualify field samples.

Percent recoveries for Deuterated Monitoring Compounds (DMCs) 1,2-dichloroethane-_{d4} and 1,1,2,2-tetrachloroethane-_{d2} were outside upper control limits for volatile samples COVM3, COVM6 and COVM7 and COVM2, COVM4, COVM6, COVM7 and COVM8, respectively. Analytes associated with these DMCs in these samples were not detected; quantitation limits are not qualified based on these findings.

Tentatively Identified Compounds (TICs) are not reviewed by data validators. The validation qualifiers are applied by EXES electronic validation based on laboratory qualifiers. By definition, all compounds identified as TICs should be treated as tentative identifications and all reported results should be considered estimated.

No manual integrations were noted in the laboratory case narrative for either samples or standards in this SDG.

Sample calculation checks were performed. All calculated results had Relative Percent Differences (RPDs) less than 5% of the reported results. No sample data were qualified.

Validation qualifiers are only applied by the validator to field samples. Qualifiers may be applied by EXES electronic validation in addition to laboratory quality control samples.

Glossary of Organic Data Qualifier Codes

Validation Qualifiers	In order of descending precedence. Only one of these qualifiers may apply to any result.
R	The data are unusable. The sample results are rejected due to serious deficiencies in meeting QC criteria. The analyte may or may not be present in the sample.
UJ	The analyte was analyzed for, but was not detected. The reported quantitation limit is approximate and may be inaccurate or imprecise.
U	The analyte was analyzed for, but was not detected above the level of the reported sample quantitation limit
J	The result is an estimated quantity. The associated numerical value is the approximate concentration of the analyte in the sample.
J+	The result is an estimated quantity, but the result may be biased high.
J-	The result is an estimated quantity, but the result may be biased low.
Additional Qualifiers	Additional qualifiers may be combined with other qualifiers.
N	The analyte has been “tentatively identified” or “presumptively” as present.
C	The target Pesticide or Aroclor analyte identification has been confirmed by Gas Chromatography/Mass Spectrometry (GC/MS). This qualifier may be added to other qualifiers.
X	The target Pesticide or Aroclor analyte identification was not confirmed when GC/MS analysis was performed. This qualifier may be added to other qualifiers.

Subject: Organic Data Validation (S4VEM)
Paint Waste Burial Site
50689 COVN1

This data package consisted of one (1) trip blank analyzed for trace volatile target analytes and twelve (12) soil samples, including two (2) field duplicate samples, analyzed for volatile target analytes.

Analyses were performed by Chemtex (CHX) according to Contract Laboratory Program (CLP) Statement of Work (SOW) SFAM01.1.

Data were validated according to ICF/ESAT SOP R3QA650 (Standard Operating Procedure for Organic Data Review and Data Validation Report Preparation). Electronic validation was performed by the Electronic Data eXchange & Evaluation System (EXES). The validation report has been assigned the Superfund Data Validation Level Stage_4_Validation_Electronic_Manual (S4VEM).

The following validation narrative is an evaluation of laboratory reported data based on the electronic data package available through the EXES Data Manager dated April 28, 2023 and additional information dated May 5, 2023.

Field duplicates COVP7 and COVP8 of this SDG are paired to samples COVM6 and COVM1, which were analyzed in SDG COVL9. Comparison of these field duplicate pair is discussed in "Notes".

Summary

No significant data quality outliers or technical deficiencies were identified that would require rejection of sample results. Calibration issues, Deuterated Monitoring Compound (DMC) and blank contamination required estimation of sample results.

Minor Problems

Chloroethane failed criteria [percent Difference (%D)] in an initial calibration. This analyte was not detected in associated sample analyses; quantitation limits are estimated and have been qualified "UJ" in affected samples.

The percent recovery for DMC 2-butanone-d5 was outside upper control limits for volatile samples COVN1, COVN4, COVP5. Detected concentrations for associated analyte acetone in samples COVN1 and COVP5 may be estimated high and have been qualified "J+".

An associated method blank reported a concentration for acetone greater than the Contract Required Quantitation Limit (CRQL). The detected concentration reported for sample COVN4, which was less than the CRQL, has been reported at the CRQL and qualified "U". Detected concentrations greater than the CRQL may be estimated high and have been qualified "J+".

Notes

Detected concentrations for target analytes less than CRQLs are estimated and have been qualified "J".

Trip blank COVP2 reported a concentration for chloroform greater than the CRQL. The detected concentration for chloroform in sample COVP6, which was less than the CRQL, is reported at the CRQL and qualified "U". The detected concentration for chloroform in sample COVN6 is greater than 10X the blank concentration and is not qualified based on this finding.

The percent recovery for DMC 2-hexanone-d5 was outside upper control limits for volatile samples COVN1, COVP5. The percent recovery for DMC 1,1,2,2-tetrachloroethane-d2 was outside upper control limits for volatile samples COVN1, COVN5, COVP5, COVP7. Analytes associated with these DMCs in these samples were not detected; quantitation limits are not qualified based on these findings.

Due to high concentrations, samples COVN2 and COVP6 were reanalyzed at medium level for acetone. Acetone was reported from the medium level.

Tetrachloroethene failed criteria [percent Relative Standard Deviation (%RSD)] in the initial trace volatile calibration. This calibration was associated with the medium level analyses; tetrachloroethene was not reported from the medium level. No data were qualified based on this finding.

No detected concentrations for target compounds were reported in field duplicate pair COVM1/COVP8. No data were qualified based on field duplicate precision.

Results reported for field duplicate pair MCOAK0/MCOAK3 were comparable for all analytes except acetone. No data were qualified based on field duplicate precision.

Tentatively Identified Compounds (TICs) are not reviewed by data validators. The validation qualifiers are applied by EXES electronic validation based on laboratory qualifiers. By definition, all compounds identified as TICs should be treated as tentative identifications and all reported results should be considered estimated.

No manual integrations were noted in the laboratory case narrative for either samples or standards in this SDG.

Sample calculation checks were performed. All calculated results had Relative Percent Differences (RPDs) less than 5% of the reported results. No sample data were qualified.

Validation qualifiers are only applied by the validator to field samples. Qualifiers may be applied by EXES electronic validation in addition to laboratory quality control samples.

Glossary of Organic Data Qualifier Codes

Validation Qualifiers	In order of descending precedence. Only one of these qualifiers may apply to any result.
R	The data are unusable. The sample results are rejected due to serious deficiencies in meeting QC criteria. The analyte may or may not be present in the sample.
UJ	The analyte was analyzed for, but was not detected. The reported quantitation limit is approximate and may be inaccurate or imprecise.
U	The analyte was analyzed for, but was not detected above the level of the reported sample quantitation limit
J	The result is an estimated quantity. The associated numerical value is the approximate concentration of the analyte in the sample.
J+	The result is an estimated quantity, but the result may be biased high.
J-	The result is an estimated quantity, but the result may be biased low.
Additional Qualifiers	Additional qualifiers may be combined with other qualifiers.
N	The analyte has been “tentatively identified” or “presumptively” as present.
C	The target Pesticide or Aroclor analyte identification has been confirmed by Gas Chromatography/Mass Spectrometry (GC/MS). This qualifier may be added to other qualifiers.
X	The target Pesticide or Aroclor analyte identification was not confirmed when GC/MS analysis was performed. This qualifier may be added to other qualifiers.
