1.0 INTRODUCTION

This Phase II Comprehensive Site Assessment Report (Phase II) has been prepared by KGSNE JV II, LLC (KGSNE) for the former American Tissue Mill site (also known as the former Temple Stuart factory) located 24 Holman Street in Templeton, Massachusetts (the Site) which was assigned release tracking number (RTN) 2-0000924. A Locus Plan depicting the approximate Site location is included as Figure 1-1.

This Phase II report has been prepared to meet the requirements set forth in in sections 310 CMR 40.0830 of the Massachusetts Contingency Plan (MCP). This Phase II report and has been prepared on behalf of the United States Environmental Protection Agency (EPA).

2.0 GENERAL SITE INFORMATION

The following sections describe the Site and surrounding properties and include summaries of ownership history and previous environmental investigations.

2.1 Site Location, Description, and Disposal Site Description

The Site is an approximately 23-acres former wood-ware and furniture factory, and later a storage facility for a paper manufacturing company. The developed portion of the property consists of paved and unpaved roads/driveways, a paved parking area, an empty warehouse constructed in approximately 1976, a derelict garage building constructed in approximately 1940, and a steel water tower. Several concrete foundations for building and other infrastructure are present. The undeveloped portion of the Site is located along the northeastern property boundary and consists of a heavily vegetated area formerly used as a landfill and wetland area.

The Site is bounded by an active railroad right-of-way along the western boundary, Route 202 and residential/undeveloped property to the north, and residential/undeveloped property to the east, and south.

The property is relatively flat with elevations ranging between 275 and 278 feet above mean sea level (AMSL), with the southern portion of the site located at elevations of 280 to 285 AMSL with a slope that is buttressed by a former building foundation separating the two tiers.

A Site Plan depicting pertinent Site features and the approximate Disposal Site limits is included as Figure 2-1.

Contaminants including polychlorinated biphenyls (PCBs), metals, and petroleum products (including free-phase petroleum) have been detected in soil and/or groundwater samples. One additional RTN has been linked to the primary RTN 2-0000924. Additional details are provided subsequently.

2.2 Site Ownership and Usage

According to Town of Templeton Assessor's office records, the Site is currently owned by MacVallee LLC. The Site is currently vacant.

2.3 Site Operations History

The Site was historically occupied by Holman & Harris to manufacture wooden pails, tubs and buckets from 1884 to 1909. Temple Stuart Company purchased the property and began manufacturing wooden furniture at the Site in 1910. Waste generated reportedly included crankcase oil, paint thinners, lacquers and glues. American Tissue Mills of MA (ATMM) purchased the property in 1992 and reportedly utilized the property for equipment and material storage until approximately 2000. The Site was first listed by Massachusetts Department of Environmental Protection (MassDEP) as a Location to be Investigated (LTBI) in January 1993 when a release of oil and hazardous materials was reported by ATMM, and RTN 2-0000924 was assigned.

2.4 Historical Investigations and Response Actions

A summary of historical Site investigations and removal actions is provided in this section. Several actions happened in conjunction with one another. A summary of historical sampling locations is provided on Figure 2-2.

2.4.1 August 1990 - Phase I ESA

A Phase I Environmental Site Assessment (ESA) was completed by ENSOL for ATMM in August 1990. Historical information showed that the Site was used for furniture manufacturing from 1910-1990 by Temple Stuarts, which included the use of lacquers, stains, glue, heating oil, and compressor oil. ENSOL noted there were three underground storage tanks (USTs) on the Site; one 10,000-gallon fuel oil UST, and two 500-gallon benzene USTs. ENSOL concluded there were three possible sources of contamination, including the three USTs, a historical septic field, and historical solid waste disposal on the Site.

As part of the Phase I ESA, 18 soil borings were advanced to 5 feet below ground surface (bgs) and six monitoring wells were installed and sampled. Low petroleum concentrations were detected in

soil and no volatile organic compounds (VOCs) or petroleum contamination was detected in groundwater. ENSOL concluded that there was no evidence of a release.

2.4.2 December 1991 – Environmental Audit

Tighe & Bond completed an Environmental Audit for ATMM in December 1991. Six additional borings were advanced, and four wells were installed and sampled for volatile organic compounds (VOCs), metals, and total petroleum hydrocarbons (TPH). Surface water samples were collected from the stream that flows adjacent to the toe of the Landfill Area and analyzed for VOCs only. The report documents multiple drums and containers, some obviously leaking, stored throughout the Site. The report identifies one 10,000-gallon fuel oil UST, one 10,000-gallon fuel oil above-ground storage tank (AST), two 500-gallon benzene USTs, and one 275-gallon fuel oil AST. Other potential sources of contamination identified in the report included four septic systems serving on the north portion of the Site. According to the report, the landfill was used to dispose of boiler ash, bricks, and other debris. Results of the investigation did not identify a significant release near the fuel oil UST or the septic systems. Barium was detected in a monitoring well in the Landfill Area (MW-9), and elevated concentrations of TPH (18,000 ppm) were detected in soil from a boring near the 10,000-gallon fuel oil AST (MW-13). The groundwater sample collected from this location did not contain elevated concentrations. A surface soil sample collected near an obviously leaking drum in the Landfill Area (L-1) contained 130,000 ppm TPH. The Environmental Audit report was submitted to MassDEP in April 1992 prompting the establishment of RTN 2-0000924.

2.4.3 1993 to 1994 – NAPL Discovery and STM

In March 1993, a Resource Conservation and Recovery Act (RCRA) inspection identified several drums and containers throughout the Site. In May 1993, MassDEP conducted a Site visit in response to a waiver application submitted in April. During the visit, 2 feet of non-aqueous phase liquid (NAPL) was present in MW-13, near the fuel oil AST. In July, MassDEP issued a letter to ATMM requesting a proposal for a Short-Term Measure (STM) to address the NAPL, surface soil contamination, and drums at the Site. Tighe & Bond submitted a STM proposal in August 1993 proposing the removal of contaminated surface soil, the screening/sorting of debris from the Landfill Area, the removal and disposal of drums/containers throughout the Site, and the installation of a passive oil recovery system in MW-13. The report states that the NAPL may be compressor oil released in a trench drain nearby in Building A, rather than heating oil from the 10,000- gallon AST.

Tighe & Bond submitted an STM Report in February 1994 which documented the removal of drums and storage containers. It also concluded that the NAPL was from the compressor/trench

area. Also in February 1994, Tighe & Bond submitted a letter regarding a Landfill Area investigation in which test pits indicated that the north and south landfill contained clean sand and one area contained miscellaneous debris.

An Interim Measure (IM) Proposal was submitted to MassDEP in March 1994 to address the NAPL. It proposed the installation of an oil scavenger in MW-13, demolition of a portion of Building A, and an excavation of 90 cubic yards of contaminated soil. This IM was denied as the soil volume was concluded to be underestimated. Similarly, the waiver application was denied since the NAPL was not controlled.

2.4.4 1994 to 2001 – Tier Classification

In May 1994, a Tier Classification was issued. The Site was officially classified as Tier 1A in October 1994. An Immediate Response Action (IRA) was initiated to assess the NAPL. In October 1999 the Tier Classification Permit expired. In March 2000, a Permit Extension Request was filed. MassDEP issued a conditional permit extension for the Site and established a deadline for the Phase II Response Action Outcome (RAO) to be completed by permit expiration in October 2001.

2.4.5 1995 - IRA

Tighe & Bond submitted an assessment-only IRA Plan to MassDEP in December 1994. A Status Report from March 1995 concluded that there was a true NAPL layer. In May 1995, an IRA Completion Statement was submitted presenting the limits of the plume area and proposed NAPL recovery be conducted via Release Abatement Measure (RAM).

2.4.6 1995 to 2001 - RAM

A RAM plan, which outlined a NAPL recovery system near MW-13, was submitted to MassDEP in August 1995 and approved in September. A Status Report in January 1996 indicated that no progress had been made and in June 1996, MassDEP requested a written commitment letter from ATMM, establishing an Interim Deadline for the RAM and Phase II (see Section 2.4.7 below for details on the Phase II). A commitment letter was signed later that month and proposed work on both the RAM and Phase II to begin in July, with completion of the Phase II by November, and the NAPL treatment system running by December. Two letters were submitted later in 1996 pushing back the deadline for the Phase II and RAM.

In June 1997, the NAPL treatment system started operating. Several RAM Status Reports were submitted between 1998 and 2000. All of them noted that system effluent was at an acceptable

level. The last Status Report in 2000 stated the 401,000 gallons of water had been treated and 38 gallons of NAPL had been recovered since the start of operation.

A RAM Modification Plan was submitted on November 6, 2000, proposing the excavation of 750 cubic yards of contaminated soil in the NAPL area. Excavation of soil had already begun prior to approval, and MassDEP issued conditional approval on November 30, 2000. Excavation was completed in December 2000. 500 cubic yards of soil were removed and transported from the site for disposal.

In February 2001, a RAM Completion Statement and Class A-2 Partial RAO were submitted for the NAPL release. Confirmatory sampling for extractable petroleum hydrocarbons (EPH) showed that soil and groundwater in the area were below the Method 1 Standards.

2.4.7 1995 to 2001 - Phase II & Phase III

In May 1995, a Phase II Scope of Work (SOW) was submitted at the same time as the RAM Plan, for additional test pitting and borings in the Landfill Area. In February 1997, a Phase II interim Report was submitted and indicated PCBs were detected in the landfill up to 3.6 ppm and in wetland sediments at 5 ppm. A dioxin sample from the landfill contained 9.96 ppt. No groundwater samples contained concentrations of contaminants that exceed Method 1 standards. A Method III Risk Assessment SOW was submitted to MassDEP in October 1997 and was approved in January 1998.

A letter from Tighe & Bond was received in January 2001 stating that an issue with the analytical lab has delayed dioxin results and the Phase II and III submittals would be delayed. MassDEP extended the deadline for the submittals.

On March 15, 2001, a Phase II Comprehensive Site Assessment and a Phase III Remedial Action Plan were submitted. The Phase II report concluded that there was a significant risk associated with soil and groundwater contamination in the Landfill Area and a Stage II Ecological Risk Assessment was required. The Phase III proposed additional sampling to confirm contaminant extent and the construction of an engineered barrier or cap to achieve a condition of No Significant Risk. The cost was estimated to be approximately $1 million.

2.4.8 2000 - EPA SI

In April 2000, the department received the EPA's Site Inspection (SI). A letter of No Further Remedial Action Planned (NFRAP) from EPA was issued for the Site.

2.4.9 2000 to 2001 - UST Removal IRA

In December 2000, the removal of an abandoned benzene UST was conducted. Elevated headspace levels up to 339 ppm were detected by the photoionization detector (PID) during removal, which prompted MassDEP notification and subsequently RTN 2-13599 was issued. An IRA was approved for the removal of the UST, removal of less than 50 cubic yards of soil and the screening of buildings and utilities for LEL. In January 2001, a notice of responsibility associated with RTN 2-13599 was issued to ATMM.

In February 2001 an IRA Plan was submitted for the UST Area. The plan proposed excavation of 50 cubic yards of soil and ex-situ bioremediation in a covered treatment cell to be constructed on a paved portion of the Site. No response from MassDEP was given and the IRA Plan was presumptively approved.

In May 2001, employees at ATMM started work proposed in the IRA without the knowledge or oversight of the Licensed Site Professional (LSP). Work was stopped after MassDEP's Emergency Response (ER) unit conducted a Site visit.

In June 2001, ATMM contacted ER and agreed to ship the soil off-Site for disposal rather than continue with the IRA as planned. A notice of noncompliance was issued to ATMM for the soil management violations observed in May. No further submittals for RTN 2-13599 or IRA completion documentation were included in MassDEP's electronic document system. Therefore, KGSNE cannot identify whether this IRA was formally closed or if a condition of No Significant Risk was achieved.

2.4.10 2001 to 2002 - Phase IV

October 2001 MassDEP established RAO and Phase IV deadlines. In January 2003, MassDEP issued a penalty to ATMM for failure to meet the deadline of the submittal of the Phase IV of August 2002.

2.4.11 2001 to 2004 - EPA Remedial Actions on the Site

EPA conducted a PA/SI in 2001 to evaluate the Site for a potential time critical removal action. Based on the PA/SI results, EPA issued an action memorandum to initiate a time-critical removal action.

EPA conducted a time-critical removal action in 2003 and 2004 which included the disposal of containerized wastes, an asbestos abatement of each building, demolition of several structures,

and offsite disposal of several wastes including asbestos waste, oil wastes, caustics, herbicides, fuel oils, demolition debris, and 600 tons of PCB contaminated soil.

In October through December 2002, the EPA conducted PCB soil sampling in the Landfill Area. PCBs up to 230 ppm were detected in surficial soil. An Agency of Toxic Substances and Disease Registry (ATSDR) Health Consultation regarding the PCBs concluded there was no public health hazard because of the limited exposure on the Site. However, a Site walk conducted in April 2003 revealed signs of active recreation. MassDEP requested additional PCB sampling to delineate potential Imminent Hazard (IH) areas so that fencing could be installed. Additional PCB sampling of surficial soils was conducted in May 2003, and included sampling in the area to the east of the landfill, which had not previously been sampled. Elevated concentrations of PCBs ranging from 40 to 60 ppm were found east of the landfill along the boundary of an adjacent residential property.

EPA agreed to do residential PCB sampling around the area and to perform corrective actions if needed. They stated that dioxin sampling was not needed as the cost was high and PCB remediation would likely address areas of dioxin contamination. EPA concluded that PCB contamination is likely from an incinerator operated between 1920 and 1950.

2.4.12 2003 to 2007 - EPA Residential Removal

EPA conducted a second PA/SI and collected surface soil samples for PCB analysis from 35 residential properties in 2003. Additionally, two drinking water samples were collected from two residences that had a shallow dug well with wide casing. Drinking water samples were analyzed for VOCs, semi-volatile organic compounds (SVOCs), PCBs, and metals. No groundwater results exceeded the MCP Reportable Concentrations for groundwater categorized as GW-1 (RCGW-1) standards. However, 26 of the 35 properties had PCB levels in soil that required a Removal Action. EPA selected 10 of those properties for a subsurface investigation to determine vertical extent of PCB contamination. The EPA contractor advanced borings to 3 feet bgs and collected samples at each interval. The maximum concentration detected was 14 ppm at 1 foot bgs.

After an action memorandum was approved, EPA conducted a time-critical removal action between 2004 to 2007 to address PCB contamination in the residential areas. Over 16,000 tons of contaminated soil and debris were removed from residential properties. In November, three sediment samples from the swale running perpendicular to Route 202 and three samples from a drainage area on the western portion of the Site were collected. All samples had low PCB detections.

2.4.13 2022 - Phase I ESA

In 2022, Tighe & Bond performed a Phase I ESA at the Site. The Phase I identified one Recognized Environmental Concern (REC) which was the widespread presence of PCB, dioxin, and metal contamination, which remains a risk even with previous removal actions that reduced some PCB levels in accessible soils. The Phase I also noted several historical RECs (HRECs) including excavations done under the STM, the compressor oil release, and the benzene UST removal IRA.

3.0 2023 PHASE II FIELD INVESTIGATION PROGRAM

This section describes the environmental investigations performed by KGSNE as part of the Phase II investigation. The investigation included the collection of soil, groundwater, and concrete for field screening and laboratory analysis. Descriptions of investigation methods, observations, and field screening results are presented in the sections that follow.

3.1 Field Investigations and Technical Approach

The 2023 Phase II investigations were performed to build upon historical environmental data, and to address areas of concern identified previously. The 2023 Phase II investigation was performed in accordance with the EPA-approved Quality Assurance Project Plan Addendum (QAPPA) prepared by KGSNE in February 2023 and the QAPPA Update prepared by KGSNE in September 2023.

3.2 Soil Boring Advancement and Soil Sampling

Between February 27 and March 7 2023, KGSNE oversaw the advancement of 25 overburden soil borings. Soil samples were collected using 5-foot long dedicated Macro-Core® sampling sleeves, which were advanced continuously to 12 feet bgs. Soils were visually characterized by the KGSNE field personnel using the Burmister Method classification method.

The soil borings were advanced by Technical Drilling Services (TDS) of Sterling, Massachusetts using a track-mounted Geoprobe® 7822DT drill rig equipped with direct push technology (DPT) tooling. During drilling activities soil samples were logged for Site geology; analyzed for the presence of VOCs using headspace screening methods with an Ion Science Tiger LT PID; and collected for laboratory analysis of VOCs, SVOCs, volatile petroleum hydrocarbons (VPH), PCBs, metals, and per- and polyfluorinated substances (PFAS).

If additional soil matrix was required to obtain the minimum sample volume, additional soil was collected by advancing additional boring(s) within one foot of the initial boring to the same sampling interval and homogenized with matrix from the initial boring to form one homogenous

aliquot for laboratory analysis. Soil sample results are discussed in Section 5.1.2. Soil boring logs and associated monitoring well construction logs are included in Appendix A. Soil borings were backfilled using the soil cuttings generated from the boring. Soil boring locations are shown on Figure 3-1.

KGSNE also collected six surficial soil samples from the Northern Landfill Area. Samples were collected using a stainless-steel hand auger that was decontaminated between locations. The samples were advanced to 2 feet bgs and were homogenized in plastic bags before being classified and field screened. Surficial samples were analyzed for VOCs, PCBs, metals, and EPH. Surface soil logs are included in Appendix A. Surface soil locations are shown on Figure 3-1.

Soil samples collected for laboratory analysis were containerized into laboratory-supplied glassware immediately from the sample sleeve. Soil samples were retained on ice and transported via courier under chain-of-custody to Eurofins Northeast of Kingston, Rhode Island (Eurofins).

KGSNE remobilized to the Site on March 24th, 2023, to collect a second sample from boring 2023-SB-12 to evaluate potential imminent hazard (IH) condition arising from an elevated PCB concentration (362 mg/kg) in surface soil. KGSNE personnel collected a 0–1' sample from the approximate area of SB-12 with a decontaminated stainless-steel hand auger. PCB concentrations in the 0–1' interval were detected at 9.08 mg/kg, which is below the IH threshold, however a temporary fence was installed around the SB-12 area to prevent access to this contamination.

KGSNE remobilized to the Site between September 25 and September 27, 2023 to oversee the advancement of 50 overburden soil borings. The soil borings were advanced by GeoSearch, Inc of Sterling, Massachusetts using a track-mounted Geoprobe® 6620DT drill rig equipped with DPT tooling. Soil samples were collected using 5-foot long dedicated Macro-Core® sampling sleeves, which were advanced continuously to 3 feet bgs. During drilling activities soil samples were logged for Site geology and collected for laboratory analysis of PCBs. Soils were visually characterized by the KGSNE field personnel using the Burmister Method classification method.

The soil matrix from each boring was homogenized to form one homogenous aliquot for laboratory analysis. Soil samples collected for laboratory analysis were containerized into laboratory-supplied glassware immediately after characterization. Soil samples were retained on ice and transported via courier under chain-of-custody to Eurofins. Soil sample results are discussed in Section 5.1.2. Soil boring logs are included in Appendix A. Soil borings were backfilled using the soil cuttings generated from the boring. Soil boring locations are shown on Figure 3-2.

3.3 Monitoring Well Installation and Development

During the March 2023 drilling investigation, nine soil borings were completed as overburden groundwater monitoring wells (2023-MW-01 through 2023-MW-09). The monitoring well locations were selected based on review of existing historical information and data collected during previous investigations and field observations.

Monitoring wells were installed to a maximum depth between 12 and 15 feet bgs, with the objective of installing a well screen that intersected the water table. Monitoring wells were constructed using 2-inch diameter, Schedule 40 polyvinyl chloride (PVC) with 10-foot long 0.010-inch slotted screen. The borehole annulus surrounding each the monitoring well was filled with clean filter sand to 1 foot above the top of the well screen, then approximately 1 foot of bentonite chips, then brought to grade with a combination of filter sand and soil cuttings. Each monitoring well was completed with a flush-mounted road box set in concrete. The approximate locations of monitoring wells are shown on Figure 3-1. A summary of monitoring well construction details is presented on Table 3-1.

The newly installed groundwater monitoring wells were developed using surge and purge techniques using a submersible Whale® pump. The pump and associated tubing were surged along the length of the well screen. Once surging was completed, the Whale® pump was used to purge the wells to remove fine materials from the well screen and surrounding filter sand. Each monitoring well was developed until the extracted groundwater was visibly clear, or when approximately five well volumes had been removed, whichever occurred first. All groundwater purged during well development was returned to the ground around the wells.

During development of 2023-MW-02, the top 1.5 feet of PVC riser pipe became detached from the rest of the riser and was pulled out of the well. The filter sand subsequently fell into the opening and filled the well to 8.5 feet bgs, which was above the water table. TDS returned to the Site during groundwater sampling and drilled a new well 1 foot south of the original location. The well was then sampled directly without being developed.

3.4 Monitoring Well Elevation and Geographic Survey

On March 7, 2023 KGSNE surveyed eight monitoring wells for elevation data using a laser level. MW-02 was not included in the survey as this well had to be redrilled after surveying. Reference point elevations of the monitoring wells (top of PVC) were surveyed relative to an arbitrary benchmark elevation of 100 feet. The benchmark was chosen to be the top of a fire hydrant on the southwest side of the Site, near Holeman Street. This survey information was used in conjunction with groundwater depth information collected during groundwater sampling activities to

determine groundwater elevations and create a groundwater contour map (Figure 3-3). During Phase II investigations, the depth to groundwater at the Site ranged from approximately 1.75 to 10.5 feet bgs. Based on the information gathered during the Phase II investigation, groundwater flow appears to be to the south/southwest toward Elm Street. This flow direction is consistent with historical evaluations of groundwater flow direction.

3.5 Groundwater Sampling

On March 30 and 31, 2023, KGSNE collected groundwater samples from the nine newly installed wells. All groundwater samples were collected using the EPA low-flow groundwater sampling protocols. Groundwater geochemical parameters (pH, turbidity, temperature, dissolved oxygen, specific conductivity, and oxidation reduction potential) were continuously monitored during well purging using YSI ProDSS water quality meter sonde and a separate Geotech turbidity meter. Low flow groundwater sampling field logs are included in Appendix B. All low flow samples were collected using peristaltic pumps and dedicated HDPE tubing.

Groundwater samples were containerized into laboratory-supplied bottles, retained on ice, and transported via courier under chain-of-custody to Eurofins for analysis of VOCs, SVOCs, VPH, PCBs, metals and PFAS.

3.6 Supplemental PCB Concrete Investigation

On September 27, 2023, KGSNE collected 30 concrete samples from the former building foundations to try to identify the source of PCB contamination in soil and establish data for potential removal actions. Locations were laid out in a 40-foot grid across Building C and the northern portion of Building A. Using a rotary impact hammer drill, KGSNE drilled 0.5-inch-deep holes in the concrete and collected the concrete dust. Samples were containerized into laboratory-supplied glassware, retained on ice, and transported via courier under chain-of-custody to Eurofins. Locations of the concrete samples is shown on Figure 3-4.

4.0 DATA USABILITY EVALUATION

Nobis Group (Nobis), under a USEPA contract as a subcontractor to KGSNE, performed a Tier 1 Stage 2A manual data review (S2AVM) on the organic and inorganic analytical data collected during the TBA. The Tier 1 Stage 2A manual data review was performed in accordance with the Region 1 - EPA New England Environmental Data Review Supplement for Region 1 Data Review Elements and Superfund Specific Guidance/Procedures (September 2020); USEPA's National Functional Guidelines for Organic Superfund Methods Data Review (November 2020); USEPA's National Functional Guidelines for Inorganic Superfund Methods Data Review (November 2020);

the Program Quality Assurance Project Plan (Program QAPP) (RFA# 12263), dated October 2022, the QAPPA (February 2023) for the American Tissue Mill Site, which appends the October 2022 Program QAPP, and the QAPPA Update (September 2023).

Overall, samples were qualified for blank contamination, duplicate exceedances, duplicate imprecision, surrogate recovery, and dual column precision.

Concrete samples had reporting limits for non-detect PCB results that exceeded the project action limit (PAL) in three samples due to required sample dilutions.

Groundwater results for five PFAS compounds in four monitoring wells were rejected due to low surrogate recovery. Results for benzidine, phenol, and pyridine were rejected in several wells due to low LCS/LCSD recoveries. Non-detect reporting limits (RLs) for hexachlorobenzene exceeded the PAL of 1 ug/L in all groundwater samples. Sample RLs ranged from 4.8 to 5.43 ug/L.

In soil, benzidine results in several samples were rejected due to MS/MSD recovery and/or low LCS/LCSD recovery. Non detect results for several PFAS compounds were rejected due to low surrogate recovery. Results for 3,3'-dichlorobenzidine, 3-nitroaniline, 4-chloroaniline, 4-nitroaniline, and aniline were rejected in one sample due to poor MS/MSD recoveries. Non-detect results for C9-C18 aliphatics were rejected in most of the surface soil samples due to poor MS/MSD recoveries.

Reporting limits (RLs) for non-detect results for 1,4-diclorobenzene and hexachlorobenzene exceed the PALs in two soil boring samples. RLs for non-detect MCP- 14 metals/mercury results met the PALs for the site except for thallium RLs in several samples, where the PAL was exceeded due to a 10x dilution factor required to report other analytes. RL for non-detect results for 1,1,2,2-tetrachloroethane, dibromochloromethane, and thallium exceeded the PALs in the surface soil samples and soil borings. Reporting limits for non-detect PCB Aroclor results exceeded the PAL in three samples due to sample dilutions. In addition, RLs for non-detect thallium results exceeded the PAL in two samples due to the dilution required.

Data validation memos are included in Appendix C.

5.0 CONTAMINATION NATURE AND EXTENT

KGSNE evaluated both the historical data and the data generated during the Phase II investigation by comparing the concentrations of contaminants to Massachusetts Contingency Plan 310 CMR 40.0000 (MCP) Method 1 Soil Standards. Laboratory reports are included in Appendix D.

Due to the presumably different release mechanisms that occurred on the mill complex versus those that occurred in the landfill area, these areas will be evaluated separately.

5.1 Mill Complex Contamination Nature and Extent

Several past releases have occurred in the former mill complex area resulting in petroleum and PCB-impacted soil. Soil sampling conducted during this Phase II investigation also identified areas of PCB, polycyclic aromatic hydrocarbon (PAH), and metals contamination that appears to be present in the uppermost 2 feet of soil. Further details are provided in subsequent sections. Full analytical results for the Mill Complex can be found in Appendix E.

5.1.1 Geology and Hydrogeology

Subsurface soils observed during KGSNE investigations generally consisted of fine to medium sand with varying amounts silt and small amounts of gravel. Some clayey deposits were encountered during drilling, especially near the bottom of soil borings (12'-15' bgs).

KGSNE surveyed eight monitoring wells for elevation data using a laser level. Reference point elevations of the monitoring wells (top of PVC) were surveyed relative to an arbitrary benchmark elevation of 100 feet. This survey information was used in conjunction with groundwater depth information collected during groundwater sampling activities to determine groundwater elevations and create a groundwater contour map (Figure 3-2). Based on the information gathered during the Supplemental Phase II investigation, groundwater flow appears to be to the south/southwest toward Elm Street. Hydraulic conductivity testing was conducted in 1996 by Tighe & Bond and reported in their 2001 Phase II report. The testing showed that hydraulic conductivity in the main mill complex ranged between 1.37 ft/day and 3.28 ft/day with an even higher gradient (18 ft/day) in the landfill area. The horizontal gradient was measured to be 0.018 ft/ft.

5.1.2 Soil Sampling Results

The sections below present the laboratory analytical results from soil samples collected during the Phase II investigation activities. Using the MCP Method 1 Risk Characterization methods and Table 40.0933(9) of the MCP, "accessible" soils at the Site (0 to 3 feet bgs) would be classified as S-1 due to the potential low frequency of use by children, given the Site's proximity to residential properties and unrestricted access (i.e. no perimeter fence). Using the same rationale, "potentially accessible" soils at the Site (3 to 15 feet bgs) would be classified as S-2 under the current use and possibly S-1 under a future use if the Site is redeveloped for commercial or residential use. As a result, the soil analytical data are compared to MCP Method 1 risk

assessment standards for Category S-1 soil to provide an evaluation of potential human health risks associated with future unrestricted use of the Site. During evaluation, soils from the Landfill Area were evaluated separately from the soils in the Main Area. The Landfill Area summary can be found in Section 5.2.

Soil samples were collected for specific laboratory analysis and varying depths in accordance with the approved FTWP/QAPPA. Laboratory data reports for soil samples collected during the Phase II are included in Appendix D. Exceedances from soil borings are shown in Table 5-1.

5.1.2.1 VOC Results in Soil

Few VOCs were detected across the Site, and all concentrations were below the Method 1 risk assessment standards. Several samples and trip blanks had low acetone detections which may be attributed to cross-contamination from the lab as acetone is a common laboratory contaminant.

5.1.2.2 SVOC Results in Soil

Concentrations of benzo(a)pyrene were detected above the S-1/GW-2 and S-1/GW-3 standards of 2 mg/kg in a sample collected from MW-01 from 0 to 2 feet bgs at a concentration of 2.09 mg/kg. Several other SVOCs were detected in this sample, however none were above the applicable standards. MW-01 was situated south of the Landfill Area and high contaminant concentrations may be attributed to the former landfill activities. The 4–6' interval in SB-09 had two detections greater than the S-1 standards: benzo(a)pyrene (8.33 mg/kg) and dibenz(a,h)anthracene (2.1 mg/kg).

Several boring locations had multiple SVOC detections in the 0-2' and 2-4' depth interval, but none exceeded applicable standards. A summary of KGSNE Phase II SVOC sampling results from soil borings are included in Appendix E1 and exceedances are shown in Table 5-1.

5.1.2.3 PCBs Results in Soil

Accessible Soil (0-3 feet bgs)

- Aroclor 1254
    - Detected in 74 of the 76 soil samples collected with a minimum detection of 0.0309 mg/kg and a maximum detection of 362 mg/kg.
    - The average Aroclor 1254 concentration in accessible soil is 11 mg/kg, and the median concentration is 1.029 mg/kg.

The detection of Aroclor 1254 at 362 mg/kg is significantly greater than both the MCP Method 1 risk characterization standards, the MCP Method 3 Ceiling Limits (M3CLs) (100 mg/kg) and the Toxic Substances Control Act (TSCA) PCB-containing material threshold of 50 mg/kg.

KGSNE installed a temporary fence around soil boring 2023-SB-12 due to the elevated concentrations detected. The results of a supplemental soil sample collected from this area from between 0 and 1-foot below grade did not exceed the 10 mg/kg threshold for a MCP 2-hour reporting condition for a release that could pose an Imminent Hazard..

- Aroclor 1260
    - Detected only in a 0-2' sample collected from MW-05, at a concentration of 3.59 mg/kg which exceeds the applicable Method 1-Risk Assessment standards.

Potentially Accessible Soil (3-15 feet bgs)

- Aroclor 1254
    - Detected in 51 of the 125 soil samples collected with a minimum detection of 0.0169 mg/kg and a maximum detection of 34.8 mg/kg.
    - The average Aroclor 1254 concentration in the potentially accessible soil is 0.495 mg/kg, and the median concentration is 0.0122 mg/kg.

The higher Aroclor 1254 detections in potentially accessible soil were from the uppermost areas of the potentially accessible soil band. Concentrations appear to decrease with depth.

- Aroclor 1260
    - Detected only in only three of the 125 samples collected. None of the detections exceeded MCP Method 1 Risk Standards.

A summary of KGSNE Phase II PCB sampling results from soil borings are included in Appendices E1 and E2 and exceedances are shown in Tables 5-1 and 5-2.

5.1.2.4 Metals Results in Soil

Metals were detected in every sample, however only one sample exhibited detections that exceeded applicable standards. The shallow (0-2') interval of the MW-05 boring contained barium, lead, and zinc at concentrations exceeding the Method 1 S-1 soil standard. Of these three metals, barium and lead exceeded Method 1 S-2 and S-3 soil standards, while zinc exceeded only the S-3 soil standard. Thallium was detected at a concentration exceeding the Method 1 S-1 in a sample

collected from the 10-12' interval, which is an S-2 soil. This detection did not exceed the S-2 or S-3 soil standards.

A summary of KGSNE Phase II metals sampling results from soil borings are included in Appendix E1 and exceedances are shown in Table 5-1.

5.1.2.5 PFAS Results in Soil

PFAS was detected in several samples, although there was no pattern in the depths at which it was detected. There are few standards established for PFAS, however standards for soil range from 300 µg/kg to 400 µg/kg, and all detections were less than 1 µg/kg. A summary of KGSNE Phase II PFAS sampling results from soil boredom is included in Appendix E1.

5.1.2.6 Summary of VPH Analytical Results in Soil

No VPH detections exceeded applicable standards. A summary of KGSNE Phase II VPH sampling results from soil borings are included in Appendix E1.

5.1.3 Groundwater Sample Results

The sections below present the laboratory analytical results of groundwater samples collected during Phase II investigation activities. Groundwater sampling results were evaluated by comparing them to MCP Method 1 risk assessment standards. The Site is not located in a Current or Potential Drinking Water Source Area, therefore MCP GW-1 standards do not apply to groundwater at the Site. Under future Site use scenarios, occupied buildings may be present on Site and the depth to groundwater is less than 15 feet; therefore, GW-2 standards apply to groundwater. Since all groundwater is considered a potential source to surface water, GW-3 standards also apply to the Site. Groundwater samples were collected for specific laboratory analysis in accordance with the approved FTWP/QAPPA.

Groundwater sampling data collected during the Phase II is summarized in Appendix E3. Laboratory data reports for groundwater samples collected during the Phase II are included in Appendix D.

5.1.3.1 VOC Results in Groundwater

Very few VOCs were detected in groundwater, and none were detected above the applicable standards. Acetone was detected in MW-05 at 1.61 ug/L. Bromoethane was detected in MW-01, MW-02, and MW-07 at concentrations of 1.81 µg/L, 1.57 µg/L, and 1.22 µg/L respectively. The GW-

2 standard for bromomethane is 7 µg/L. Ethanol was detected in MW-05 at 69.5 µg/L. There are no established standards for ethanol. Trichloroethane (TCE) was detected in MW-09 at 0.886 µg/L. The GW-2 standard for TCE is 5 µg/L.

5.1.3.2 SVOC Results in Groundwater

Several SVOCs were detected in groundwater. All detections were below the applicable standards. All of the wells, except for MW-04 through MW-06, had detections of acenaphthylene and acetophenone that were less than 1 µg/L. The lowest standard for both compounds is 10,000 µg/L. Those six wells also had detections of fluorene below 1 µg/L. The GW-3 standard for fluorene is 40 µg/L and there is no established fluorene GW-2 standard. Other compounds detected in Site groundwater below the GW-2 and GW-3 standards included 2-methylenapthalene, anthracene, benzo(a)anthracene, benzo(b)fluoranthene, benzoic acid, chrysene, dibenz(a,h)anthracene, and naphthalene.

5.1.3.3 PCB Results in Groundwater

There were no PCBs detected in any of the wells.

5.1.3.4 Metal Results in Groundwater

Several metals were detected in groundwater at the Site; however, all detections were below the GW-3 standards. None of the metals analyzed have established GW-2 standards. Barium was detected in all wells. Concentrations ranged from 2.5 µg/L to 38.8 µg/L, and the GW-3 standard is 50,000 µg/L. Lead concentrations ranged from 0.146 µg/L to 0.642 µg/L while the GW-3 standard for lead is 10 µg/L. Other analytes detected include chromium, mercury, nickel, selenium, vanadium, and zinc.

5.1.3.5 PFAS Results in Groundwater

Several PFAS compounds were detected in groundwater, however there were no exceedances of applicable standards. Analytes detected include PFBS (ranging from 0.318 ng/L to 0.905 ng/L), PFBA (1.04 ng/L to 2.03 ng/L), PFHpA (0.419 ng/L to 1.45 ng/L), PFHxS (0.244 ng/L to 1.23 ng/L), PFHxA (0.191 ng/L to 1.09 ng/L), PFNA (0.22 ng/L to 0.565 ng/L), and perfluoropentanonic acid (0.587 ng/L to 0.834 ng/L). Two compounds, PFOS and PFOA, were detected at concentrations notably higher than the other PFAS detections in MW-04. PFOS was detected at a concentration of 16.8 ng/L, while PFOA was detected at a concentration of 10.5 ng/L. Detections of PFOS in the other wells ranged from 0.484 ng/L to 1.44 ng/L. Detections of PFOA in other wells ranged from

0.483 ng/L to 3.22 ng/L. The GW-3 standard for PFOS and PFOA is 500,000 ng/L and 40,000,000 ng/L, respectively.

5.1.3.6 Summary of VPH Analytical Results in Groundwater

No VPH compounds were detected in groundwater samples.

5.1.4 PCBs in Concrete Sample Results

Three Aroclor compounds were detected in the concrete samples. The vast majority of the detections and overall PCB mass is associated with Aroclor-1254 with Aroclors 1260 and 1268 being detected less frequently and at generally lower concentrations. A summary of PCB exceedances in concrete are found in Table 5-3. Full analytical results are found in Appendix E4. Sample locations and results are shown on Figure 3-4.

PCB contamination of concrete is regulated under 40 CFR 761, which implements TSCA. TSCA addresses PCBs as total PCBs, therefore while individual Aroclor mixtures are detected in the concrete, the total PCB values are subject to regulation.

Cleanup of PCBs in concrete would be addressed as a Bulk PCB Remediation Waste and would be subject to an assessment of "Occupancy". The status of "High Occupancy" is met when a person spends at least 6.7 hours per week in the PCB impacted area without dermal or respiratory protection. The status of "Low Occupancy" is met when a person spends less than 6.7 hours per week in the PCB impacted area without dermal or respiratory protection.

The following table provides the logic behind the TSCA PCB cleanup for Bulk PCB Remediation Waste.

High Occupancy		Low Occupancy	
Cleanup Scenario	Cleanup Standard	Cleanup Scenario	Cleanup Standard
Unconditional use; no cover system or institutional control	≤1 mg/kg	Conditional use controlled by institutional controls only	≤25 mg/kg
Conditional use; cover system and institutional control	>1 - ≤10 mg/kg	Conditional use; secured by fence, marked per regulation, and institutional controls	> 25 - ≤50 mg/kg
		Conditional use; cover system and institutional control	>25 - ≤100 mg/kg

All but seven of the 30 concrete samples fail to meet the High Occupancy Unconditional Use threshold. Of these 23 concrete samples (excluding field duplicates), 8 fail to meet the High Occupancy Conditional Use threshold. Of those eight samples failing to meet the High Occupancy Conditional Use threshold, two exceed the Low Occupancy Conditional (Cover and Institutional Controls) threshold. The remaining 15 concrete sample PCB concentrations meet the High Occupancy Conditional (Cover and Institutional Controls Use threshold.

The maximum PCB concentration was detected in sample ATM-CC-14 at 89.9 mg/kg. The average PCB concentration in the concrete samples is approximately 10 mg/kg, which meets the High Occupancy Conditional Use threshold.

5.2 Landfill Contamination Nature and Extent

Several past sampling events in the former landfill area have identified contamination in soil. Further details are provided in subsequent sections. Full analytical results for the Landfill Area can be found in Appendix E5, while exceedances are found in Table 5-4.

5.2.1 VOC Results in Surface Soil

VOCs were detected at concentrations below applicable soil standards in all six surface soil locations.

5.2.2 PCB Results in Surface Soil

PCBs were detected in four of the six surface soil locations at concentrations above the S-1/GW-2 and S-1/GW-3 standards of 1 mg/Kg including SS-01, SS-03, SS-04, and SS-06. Concentrations

ranged from 1.61 mg/Kg to 6.4 mg/Kg, the highest being found in SS-06. Exceedances in surface soil are shown in Table 5-4.

5.2.3 Metals Results in Surface Soil

Metals were detected in all six surface soil samples below the applicable standards.

5.2.4 EPH Results in Surface Soil

EPH was detected in four of the six surface soil samples below the applicable standards. SS-01, SS-03, and SS-04 exhibited detections of aromatics and aliphatics. SS-06 had detects of every EPH compound except aromatics.

6.0 ENVIRONMENTAL FATE AND TRANSPORT OF CONTAMINANTS OF CONCERN AND POTENTIAL MIGRATION PATHWAY

The primary contaminants of concern (COCs) at the Site are PCBs, SVOCs, and metals in accessible and potentially accessible soil.

6.1 Environmental Fate and Transport

Elevated concentrations of SVOCs, PCBs, and metals have been detected in soil at the Site. Contaminants released to the subsurface undergo physical, chemical, and biological processes that affect the fate and transport of these compounds. These processes include dispersion, dilution, volatilization, sorption, and biodegradation. Portions of the contaminants may become adsorbed to soil particles, portions volatilize into the vadose zone, and, depending on the volume released, the soluble portion may be transported in the dissolved phase through precipitation passing through the vadose zone. The water-soluble constituents will migrate with groundwater via advection and dispersion. Based on data collected during 2023 investigations, PCB impacts appear to be widespread across the Site, while SVOC and metals impacts are limited to a few specific locations which may be related to previous excavations and the former landfill.

6.2 Potential Migration Pathways

The potential migration pathways associated with Site soil and groundwater are evaluated in the sections that follow.

6.2.1 Soil Pathway

Elevated concentrations of PCBs, SVOCs, and metals have been detected in surface and subsurface soils. Under current use, potential exposure to these soils is high. Although the Site is

vacant, it is not fenced off and evidence of recreation on the Site has been observed. Under future use (residential, commercial, or industrial) exposure to these soils is possible through ingestion, inhalation of fugitive dusts, or dermal contact.

6.2.2 Groundwater Pathway

Low concentrations of VOCs, metals, SVOCs, and PFAS have been detected in groundwater samples collected at the Site. Under current use, groundwater at the Site is not used for drinking water supply or manufacturing processes, so this exposure pathway is currently incomplete. Under future use scenarios, exposure to contaminated groundwater is unlikely, but not prohibited.

7.0 NATURE AND EXTENT OF CONTAMINATION AND DISPOSAL SITE LIMITS

Concentrations of PCBs, SVOCs, and metals have been detected above applicable MCP Method 1 soil standards throughout the Site. Concentrations of metals and SVOCs in soil have been limited to isolated locations, while PCB distribution is widespread. Using MCP Method 1 Risk Assessment methods, concentrations of PCBs, and metals detected in Site soils still pose a significant risk to human health and the environment.

7.1 Soil Contamination

Concentrations of PCBs, SVOCs, and metals that exceed applicable Method 1 soil standards were detected in soil boring samples throughout the Main Area of the Site, while the TBA samples collected from the Landfill Area only exhibited PCB exceedances.

PCBs detected in the Main Area extend across the entire Main Area Site. The source of the PCBs is not known. In this area, PCB contamination is mainly surficial but extends to 6 feet bgs in SB-07. The highest concentration was detected in SB-12 in the 0–2-foot sample (362 mg/kg). These PCB detections extend through an area where several historical excavations took place, for the benzene UST and PCB contamination. One other location, SB-01, which is south of the Landfill Area, had surficial PCBs exceedances and may be attributed to migration from the landfill.

SVOC exceedances were found in two locations. SVOCs in SB-09, which was near the former compressor oil clean up, exceeded standards in the 4-6 foot sample, while exceedances in MW-01 were found in the 0-2 foot sample. Metals were found in the 0–2-foot sample of MW-05, which is in the area of the former benzene UST. PCB exceedances in the Landfill Area were found in four of the locations sampled.

7.2 Groundwater Contamination

Low concentrations of VOCs, metals, SVOCs, and PFAS were detected in all of the nine monitoring wells. None of the concentrations exceed applicable Method 1 groundwater standards.

7.3 Concrete Contamination

Concentrations of PCBs were detected in concrete samples collected from throughout the Building A slab and throughout the exposed portions of the Building C slab. No concrete samples were collected from within the Building C warehouse building.

Concentrations ranged from less than 1 mg/kg to 89.9 mg/kg. Approximately 20% of the concrete samples met TSCA's High Occupancy – Unconditional threshold. The remaining samples and therefore the majority of the Building A and C slabs are impacted.

8.0 EXPOSURE ASSESSMENT

Because the Site is unsecured, impacted soil and concrete that are "accessible" present the most significant potential exposure risk. Most of the soil samples where concentrations exceed MCP Method 1 standards are considered "accessible" under the MCP. Therefore, under the current use scenario, there is a potential for trespasser exposure to soil contamination.

Under current use, groundwater at the Site is not used for drinking water supply or manufacturing processes. Therefore, exposure to groundwater COCs is unlikely.

Future use for the site has not been established, and therefore, a conservative future exposure assumption of residential use is evaluated.

9.0 RISK CHARACTERIZATION

A summary of human and environmental receptors is provided in the sections that follow.

9.1 Identification of Human Receptors

The Site is currently unoccupied and potential human receptors under current use are restricted to trespassers. Residential properties are located within 100 feet of the Site, and the Site is currently unsecured, therefore it is reasonable to expect that teenage or older trespassers are accessing the Site. It is unlikely that children are accessing the Site on a regular basis, however due to the abutting residences, it is not impossible.

Potential future receptors under reasonably foreseeable conditions could include lifelong residents, young children, women of child bearing age, trespassers, and construction/utility workers.

9.2 Identification of Environmental Receptors

Based on information available from Massachusetts Geographic Information Systems (MassGIS) Map (Figure 9-1), there are no Zone II areas, Interim Wellhead Protection Areas, Zone A areas, Potentially Productive Aquifers or Groundwater Protection Districts within 500 feet of the Site. There are also no Areas of Environmental Concern/Environmental Receptors as defined in 40.0483(1)(a)(8)(c), such as:

- Areas of Critical Environmental Concern;
- Sole Source Aquifers;
- Fish Habitats;
- Habitats of Species of Special Concern; and
- Habitats of Species of Threatened or Endangered Species.

9.3 Identification of Site Activities and Uses

The Site does not currently have any uses, as it has been vacant and unoccupied for several years. Potential future activities and uses include construction/demolition and residential and/or commercial use.

9.4 Identification of Applicable Soil and Groundwater Categories

Using the MCP Method 1 Risk Characterization methods and Table 40.0933(9) of the MCP, "accessible" soils at the Site (0 to 3 feet bgs) are classified as S-1 due to the potential high frequency of use by children, given the Site's proximity to residential properties and unrestricted access. Using the same rationale, "potentially accessible" soils at the Site (3 to 15 feet bgs) would be classified as S-2 under the current use and possibly classified as S-1 under a future use. For the purpose of evaluating risks, KGSNE has assumed all soil at the Site is classified as S-1.

9.5 Identification of Exposure Points and Exposure Pathways

For soil, the exposure point is the horizontal and vertical extent of contaminated soil identified through the collection of soil samples from the Site. The potential exposure pathways for soil are through ingestions of soil, inhalation of dusts, or dermal absorption.

9.6 Calculation of Exposure Point Concentrations

KGSNE evaluated human health, public welfare, and environmental risk for several analytes in soil using a Method 1 Risk Characterization as outlined in 40 CMR 40.0973. To do this, KGSNE calculated the Exposure Point Concentration (EPC) for several analytes in soil including PCBs, SVOCs, and metals. A condition of no significant risk would exist at the Site if no EPC is greater than the applicable MCP Method 1 Soil Standard.

EPCs for Site soil in the Main Area were developed using data gathered during soil boring investigations in March 2023 and September 2023. Historical data was not included, as in some cases it may have been remediated previously, may be too old, and may not be of sufficient quality to meet presumptive certainty to be assessed in an EPC calculation. The EPCs were evaluated by depth; a 0-3 feet bgs range for accessible soils, and a 3-15 feet bgs range for potentially accessible soils. Although accessible and potentially accessible soil was assessed separately, both data sets included samples from 2-4 feet bgs to capture the 3-foot interval. EPCs were calculated using two methods based on the sample collection methods of each data set according to 40 CMR 40.0926(8)(a)1 and 2. For exposure points where systematic sampling was used, the 90th percentile Chebyshev non-parametric upper confidence limit (UCL) was used as the EPC. The UCL was calculated using ProUCL Version 5.1. These exposure points include PCBs in soil shallower than 3 feet, and concrete. A copy of the ProUCL outputs for both media is included in Appendix F. For exposure points where judgmental sampling was implemented, the arithmetic mean of data was used as the EPC. This included PCBs, PAHs, and metals.

For PCBs in accessible soil in the Main Area, KGSNE calculated EPCs using the 90% UCL (Table 9-1A), due to the systematic sampling that occurred in September 2023. However, because the initial sampling in March 2023, which accounts for half the data used in the data set, was conducted using judgmental sampling based off historical site use, KGSNE also calculated the EPC using the arithmetic mean. An evaluation of the Aroclor 1254 data identified a hot spot (a concentration that was greater than 10 times the standard) at boring 2023-SB-12 where the maximum concentration of 362 mg/kg was greater than 10 times the standard (the S-1 standard for Aroclor 1254 at this depth being 1 mg/kg). According to 40 CMR 40.0926(8)a1, in this instance, the maximum concentration of the data set would be used as the EPC. The calculation for this EPC is shown in Table 9-1B. To demonstrate the extent of PCBs in surficial soil, KGSNE also calculated the EPC for this exposure point using the arithmetic mean without substituting for the hotspot value (Table 9-1C). In all three instances, the EPC for Aroclor 1254 exceeded the MCP S-1 standard. KGSNE used both methods to calculate the EPC for Aroclor 1260, which was below the MCP S-1 standard in both cases. The table below shows the different EPC outcomes for the different calculation methods.

Analyte	Calculation Method	EPC	MCP S-1 Exceedance
Aroclor 1254	90% UCL	19.93	Yes
	Arithmetic mean using hotspot EPC	362	Yes
	Arithmetic mean without hotspot substitution	8.63	Yes
Aroclor 1260	90% UCL	0.17	No
	Arithmetic mean	0.193	No

For concrete, KGSNE evaluated EPCs for three PCB compounds; Aroclor 1254, Aroclor, 1260, and Aroclor 1268. KGSNE calculated the EPC using the 90% UCL. There is no MCP standard for concrete, so KGSNE compared the EPC to the S-1 soil standard. All three PCB compounds had EPCs greater than the S-1 standard of 1 mg/kg. Aroclor 1254 had the highest EPC of 16.78 mg/kg, while Aroclor 1268 had the lowest at 1.18 mg/kg. EPC calculations are shown in Table 9-2.

PAHs and metals exhibited exceedances in both the accessible and potentially accessible soil. The EPCs for these analytes, as well as PCBs deeper than 3 feet, were calculated using the arithmetic mean. The data used for this assessment was from the judgmental sampling conducted in March 2023. The data sets were analyzed to ensure that 75% of the data used in the averaging was less than or equal to the applicable standard and no data point was 10 times greater than the applicable standard. One data set, Aroclor 1254 in the 3–15-foot range, had a hot spot. The maximum concentration of 34.8 mg/kg was used as the EPC. All EPCs were less than the MCP S-1 standard, except for Aroclor 1254. Calculations and EPC results are shown in Table 9-3.

Only one analyte, Aroclor 1254, had exceedances in the Landfill Area, and required risk assessment and EPC calculation (Table 9-4). Historical data was included in the EPC calculation and is shown in Table 9-5. The calculated EPC of 5.37 was greater than the Method 1 Standard.

PCBs across the Site in different media do not meet a condition of of No Significant Risk under the MCP. EPCs for Aroclor 1254 exceeded the MCP S-1 standard in surface soil and deeper soil in the main area, surface soil in the landfill area, and in concrete. EPCs for Aroclor 1260 and Aroclor 1268 also exceeded the S-1 standard in the Main Area. These concentrations pose a Significant Risk under current and future Site use.

10.0 PHASE II CONCLUSIONS

KGSNE has completed a Phase II Comprehensive Site Assessment for the American Tissue Mill property located in Templeton, Massachusetts. The following summarizes the results of historical investigations, historical remedial actions, Phase II Investigation activities performed by KGSNE in 2023, and describes the current conceptual Site model.

- The Site is approximately 23 acres in size and improved with a vacant warehouse, a water towner, and several concrete foundations and slabs. The Site is located in a residential area of Templeton, Massachusetts, and is abutted by residences to the north and east, and an active railroad track to the south and west.

- The Site was used to manufacture wooden pails, tubs and buckets from 1884 to 1909, and wooden furniture from 1910 to 1992. Waste generated reportedly included crankcase oil, paint thinners, lacquers and glues. ATMM purchased the property in 1992 and operated until approximately 2000.

Prior investigations and remedial actions have included Phase II CSAs, RAMs, IRAs, Phase III RAPs, EPA PA/Sis, and EPA time-critical removal actions.

- In 2022, Tighe & Bond performed a Phase I ESA at the Site. The Phase I identified one REC which was the presence of PCB, dioxin, and metals contamination at the site and PCB soil impacts on adjoining properties. The Phase I also noted several HRECs including excavations done under the STM, the compressor oil release, the benzene UST removal IRA.

- In March 2023 KGSNE performed a Phase II investigation to delineate the nature and extent of contamination in soil and groundwater at the Site.

- Very few VOCs were detected in soil, and all detections were below the standards. No VPH was detected in soil.

- One SVOC compound was detected in the 0-2 ft interval in MW-01 at a concentration of 2.09 mg/kg which is greater than the 2 mg/kg standard. The 4–6-foot interval in SB-09 had four detections greater than the S-1 standards. Benzo(a)pyrene (8.33 mg/kg) has an S-1 standard of 2 mg/kg and dibenz(a,h)anthracene (2.1 mg/kg) has a standard of 2 mg/kg.

- Aroclor 1260 was detected in MW-05 0–2' interval at a concentration of 3.59 mg/kg. This exceeds the applicable S-1/GW-2 and S-1/GW-3 standards of 1 mg/kg.

- Aroclor 1254 was detected in several locations in the 0–2-foot, 2-4 foot, and 4-6 foot above the 1 mg/kg standard. The 0–2' intervals where Aroclor 1254 exceeded the standard was MW-05 (26.3 mg/kg), MW-07 (8.6 mg/kg), SB-01 (1.41 mg/kg), SB-05 (1.99 mg/kg), SB-06 (23.5 mg/kg), SB-07 (2.84 mg/kg), SB-12 (362 mg/kg), and SB-13 (10.3 mg/kg). The 2-4' intervals where Aroclor 1254 exceeded the standard was MW-05 (1.08 mg/kg), SB-01 (1.21 mg/kg), SB-06 (34.8 mg/kg), and SB-07 (1.05 mg/kg). Aroclor 1254 was detected at 16.2

mg/kg and 1.11 mg/kg in SB-07 4-6' interval, and 6-8' interval respectively. Aroclor 1254 was also detected in SB-15 4-6' interval at 1.09 mg/kg.

- During the supplemental PCB investigation Aroclor 1254 was detected in exceedance of the S-1/GW-2 and S-1/GW-3 standards, both 1 mg/kg, in 29 locations. Concentrations ranged from 1.1 mg/kg to 35.6 mg/kg and had one outlier that had a concentration of 93.6 mg/kg. Surficial PCB contamination was mainly found in borings advanced in the former footprint of Building B.

- MW-05 0-2-foot interval had standard exceedances of barium, lead, and zinc. Barium was detected at 3,780 mg/kg while the S-1/GW-2 and S-1/GW-3 standards are 1,000 mg/kg. Lead was detected at 676 mg/kg and the applicable standards are 200 mg/kg. Zinc was detected at 1,970 mg/kg while the standards are 1,000 mg/kg.

- Thallium was detected above the S-1 standard of 8 mg/kg in MW-07 10–12-foot interval at a concentration of 13.6 mg/kg.

- PFAS was detected in several samples, although there was no pattern in the depths at which it was detected and none of the detections exceeded applicable standards.

- VOCs, metals, and EPH were all detected below applicable standards in the surface soil samples from the landfill.

- PCBs were detected in four of the six surface soil locations at concentrations above the S-1/GW-2 and S-1/GW-3 standards of 1 mg/Kg including SS-01, SS-03, SS-04, and SS-06. Concentrations ranged from 1.61 mg/Kg to 6.4 mg/Kg, the highest being found in SS-06.

- VOCs, SVOCs, and metals were detected in groundwater below the applicable standards. No PCBs or VPH were detected in any of the wells. Several PFAS compounds were detected below the standards in groundwater.

- Concentrations of PCBs, SVOCs, and metals were detected above the applicable MCP Method 1 soil standards in the Main Area of the Site. Using Method 1 Risk Assessment methods, concentrations of Aroclor 1254, Aroclor 1260, Aroclor 1268 still pose a Significant Risk to human health, welfare, or the environment.

Based on information presented in this Phase II CSA, KGSNE offers the following Conceptual Site Model:

- In the Main Mill Area, historical mill operations have contributed to several releases such as burning wood, spreading and dumping of debris, ash, and used materials, leaking from USTs and equipment, and spills from equipment.

- PCB distribution throughout the Site is likely caused by historical burning of wood painted with PCB-containing paints or open pit burning of the paints themselves; smokestack/incinerator deposition; and ash handling and disposal causing widespread PCB impacts at the Site and surrounding area. Locations with surficial PCB contamination are attributable to historical operation.

- SB-12 and SB-06 were advanced to evaluate former PCB excavations. PCBs detected in these locations indicate that the original excavations did not successfully remove the full extent of contamination in those areas.

- Several locations were advanced to evaluate former UST removals. It is likely that contamination from the original excavations remains, and deeper contamination may be attributed to reuse of excavation spoils as backfill.

- PAHs detected in deeper soil are likely attributed to the compressor oil release.

- Contamination present in surface soil, concrete, and subsurface soil of the main area appears to be stable and partitioning into groundwater is limited.

- Surface soil and concrete pose a threat to site users under current and future uses, while subsurface soil and groundwater mainly pose a threat to site workers during redevelopment.

- Elevated PCB concentrations in the soil within the Landfill Area can be attributed to landfill waste. Historical groundwater, surface water, and sediment samples with high PCB concentrations indicate the landfill contaminants are migrating into these medias.

- Surface soil, surface water, and sediment pose a threat to current and future users of the landfill area. Subsurface soil has the potential to harm future site construction workers, should this portion of the site ever be developed.

A graphical representation of this CSM can be found on Figure 10-1. Concentrations of PCBs, SVOCs, and metals detected in Site soils during KGSNE supplemental Phase II investigations exceed applicable Method 1 Soil Standards, indicating that residual source material is still present

at the Site and additional remediation is necessary. Prior to the submittal of this Phase II, EPA has indicated their intent to perform a removal action at the Site including excavation of soil and scarifying the concrete of the former building footprints that remain in place. This removal action will likely require a Phase II CSA Addendum to document the outcomes and re-evaluate the Site risks.

11.0 PHASE II COMPLETION STATEMENT

In accordance with 310 CMR 40.0836, a Phase II Completion Statement is being submitted along with this Phase II CSA. The Phase II Completion Statement contains the LSP opinion and certification required by 310 CMR 40.0009. The LSP-of-record for the Site, Mr. Adam Roy, renders the opinion that the response actions have been completed in accordance with all applicable requirements of the MCP, specifically 310 CMR 40.0830. This opinion is subject to the limitations presented in Appendix G.

Comprehensive Remedial Actions are necessary at the Site to achieve a Permanent Solution as described in 310 CMR 40.1000.

The Site is currently classified as Tier II. The MassDEP online database indicates that this classification was last updated in June 2023. If a removal action and Phase II Addendum is completed, the current Tier Classification will be reevaluated and rescored if necessary.

12.0 PUBLIC INVOLVEMENT

Public notification letters have been submitted to the Town of Templeton Town Manager and Board of Health to notify them of the availability of the Phase II Completion Statements. Copies of the notification letters are included as Appendix H.

TABLES

Table 3-1
Monitoring Well and Groundwater Elevation Data
American Tissue Mill
Templeton, Massachusetts

Well Designation	Top of PVC Elevation	Depth to Groundwater (ft below measuring point)	Relative Groundwater Elevation (ft)
MW-1	87.24	3.35	83.89
MW-2	--	--	--
MW-3	82.39	1.75	80.64
MW-4	91.14	3.04	88.10
MW-5	83.77	2.72	81.05
MW-6	94.07	10.32	83.75
MW-7	82.71	10.00	72.71
MW-8	82.21	8.84	73.37
MW-9	84.51	3.83	80.68

Notes:

Reference point elevations of the monitoring wells (top of PVC) were surveyed relative to an arbitrary benchmark elevation of 100 feet (fire hydrant).

MW- 2 was reinstalled on March 31, 2023 and was not resurveyed.

ft = feet

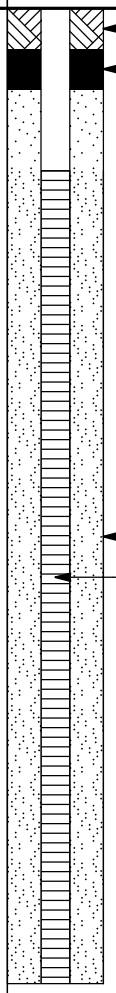
WELL DETAIL



NOTES

Soil	Percentage	Non-Soil
trace	5 - 10	very few
little	10 - 20	few
some	20 - 35	several
and	35 - 50	numerous

NOTES:

1) Boring terminated at 12 feet however bottom material expanded to fill sleeve.
2) Samples: 2023-MW-01-0002 at 13:30, 2023-MW-01-0204 at 13:35, 2023-MW-01-0406 at 13:40, 2023-MW-01-0608 at 13:45, 2023-MW-01-0810 at 13:50, 2023-MW-01-1012 at 13:55.

Soil descriptions, and lithology, are based on visual classifications and should be considered approximate. Stratification lines are approximate boundaries between stratums; transitions may be gradual.

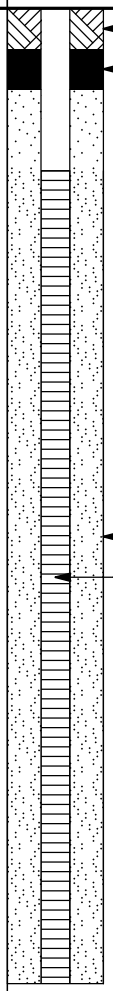
WELL DETAIL



NOTES

Soil	Percentage	Non-Soil
trace	5 - 10	very few
little	10 - 20	few
some	20 - 35	several
and	35 - 50	numerous

NOTES:

1) Boring terminated at 12 feet however bottom material expanded to fill sleeve.
2) Samples: 2023-MW-05-0002 at 10:40, 2023-MW-05-0204 at 10:45, 2023-MW-05-0406 at 11:05, 2023-MW-05-0608 at 10:50, 2023-MW-05-0810 at 10:55, 2023-MW-05-1012 at 11:00.

Soil descriptions, and lithology, are based on visual classifications and should be considered approximate. Stratification lines are approximate boundaries between stratums; transitions may be gradual.

BORING LOG

Project: American Tissue Mill

Location: Templeton, MA

Nobis Project No.: S00001.002

Boring No.: **PCB-01**

Boring Location: ATM-PCB-1

Checked by: B. Fortier

Date Start: September 25, 2023

Date Finish: September 25, 2023

Contractor: Geosearch, Inc.

Driller: M. Kelly

Nobis Rep.: S. Stone

Rig Type / Model: Geoprobe 6620DT

Hammer Type: N/A

Hammer Hoist: N/A

Ground Surface Elev.:

Datum:

	Drilling Method	Sampler
Type	Geoprobe	Macro-Core Liners
Size ID (in.)	N/A	1.75 x 60
Advancement	Direct Push	Push

Groundwater Observations

Date	Time	Depth Below Ground (ft.)	Depth of Casing (ft.)	Depth to Bottom of Hole (ft.)	Stabilization Time

Depth (ft.)	SAMPLE INFORMATION Type & No.	Rec (in.)	Depth (ft.)	Blows/ 6 in.	Ground Water	LITHOLOGY Graphic	Stratum Elev. / Depth (ft.)	SAMPLE DESCRIPTION AND REMARKS (Classification System: Modified Burmister)	NOTES
1	S1	36	0-3					S-1A (19"): Brown, fine to coarse SAND, some fine to coarse Gravel, trace Silt. Dry.	
2							SAND	S-1B (29"): Light brown, fine to medium SAND, little fine to coarse Gravel, trace Silt. Dry.	
3								S-1C (36"): Dark brown, fine to medium SAND, little Silt. Dry.	
4								Boring terminated at 3 feet.	
5									

Soil	Percentage	Non-Soil
trace	5 - 10	very few
little	10 - 20	few
some	20 - 35	several
and	35 - 50	numerous

NOTES:

1) Boring terminated at 3 feet however bottom material expanded.
2) ATM-PCB-1-0003 collected at 08:30.

Soil descriptions, and lithology, are based on visual classifications and should be considered approximate. Stratification lines are approximate boundaries between stratums; transitions may be gradual.

some	20 - 35	several
and	35 - 50	numerous

NOTES:

1) ATM-PCB-13-0003 collected at 11:15.

Soil descriptions, and lithology, are based on visual classifications and should be considered approximate. Stratification lines are approximate boundaries between stratums; transitions may be gradual.

APPENDIX C

March 30, 2023
Nobis File No. S00001.02

Mr. James Byrne
USEPA – Region 1
Land, Chemicals, and Redevelopment Division
5 Post Office Square, Suite 100
Boston, MA 02109-3912

Re: USEPA Contract No. 68HE0122D0001
USEPA Task Order No. 68HE0122F0044
Targeted Brownfields Assessment (TBA)
American Tissue Mill Site
Templeton, Massachusetts
Sample Delivery Group (SDG) No. 620104861
Eurofins New England, North Kingstown, RI

Tier 1 Stage 2A Organic Data Review

Polychlorinated Biphenyls (PCBs by 8082):

1/Soil Sample: 2023-SB-12-0001

Dear Mr. Byrne:

Nobis Group (Nobis), under a USEPA contract as a subcontractor to KGSNE JV, LLC, performed a Tier 1 Stage 2A manual data review (S2AVM) on the organic analytical data for the sample listed above. The sample was collected by Nobis at the American Tissue Mill Site located in Templeton, Massachusetts on March 24, 2023. The sample was analyzed for Polychlorinated Biphenyls by EPA Method 8082 by Eurofins New England in North Kingstown, RI.

The Tier 1 Stage 2A manual data review was performed in accordance with the Region 1 - EPA New England Environmental Data Review Supplement for Region 1 Data Review Elements and Superfund Specific Guidance/Procedures (September 2020); USEPA's National Functional Guidelines for Organic Superfund Methods Data Review (November 2020); the Program Quality Assurance Project Plan (Program QAPP) (RFA# 12263), dated October 2022, and the Quality Assurance Project Plan Addendum (QAPPA) (February 2023) for the American Tissue Mill Site, which appends the October 2022 Program QAPP.

The data were evaluated based on the following parameters:

*	•	Overall Evaluation of Data and Potential Usability Issues
*	•	Data Completeness
*	•	Preservation and Technical Holding Times
*	•	Blanks
	•	Surrogates
NA	•	Internal Standards
NA	•	Matrix Spike Analysis
NA	•	Laboratory Duplicates
*	•	Laboratory Control Samples (LCS)

Nobis Group®
585 Middlesex Street
Lowell, MA 01851
T (978) 683-0891

NA	•	Field Duplicates
NA	•	Performance Evaluation (PE) Samples
*	•	Target Analyte Identification
*	•	Reported Quantitation Limits

* All criteria were met for this parameter or did not require qualification.
NA – Not applicable.

Overall Evaluation of Data and Potential Usability Issues

The site sampling objectives are:

- Characterize sub-surface soil for the presence of possible site-related contamination.
- Evaluate groundwater for the presence of possible site-related contamination.

The data meet the project quality criteria and can be used without restriction except as summarized below. The attachments provide details and supporting documentation.

PCBs:
Results were qualified due to surrogate recovery exceedance.

Please contact Linda Terzis at lterzis@nobis-group.com should you have any questions or comments regarding this information.

Sincerely,

NOBIS GROUP®

Linda Terzis

Tier 1/Stage 2A Data Review Checklist

Project: **American Tissue Mill, Templeton, Massachusetts**
Targeted Brownfields Assessment (TBA)
Project #: **S00001.02**
Case#: **NA**
Date: **03/29/2023**

Methods: **Polychlorinated Biphenyls (PCBs) (8082)**

Laboratory: Eurofins New England, North Kingstown, RI
SDG: 620104861
Reviewer: Linda Terzis

1. **Case Narrative and Data Package Completeness (COC and Analyte List Review)**
One (1) soil sample was listed on the COC for SDG 620104861. The sample was collected on 03/24/2023. The sample was received at the laboratory on 03/27/2023 at 2.2 °C.

Sample ID	Laboratory ID	Analyses
2023-SB-12-0001	620-10486-1	PCBs

The data were evaluated using the site-specific Quality Assurance Project Plan Addendum (QAPPA) (dated February 2023) and the Program QAPP (dated October 2022). Both were prepared by KGSNE, LLC. The QAPPA appends and incorporates by reference the procedures and quality control measures detailed in the Program QAPP (October 2022). Therefore, site data for this SDG were evaluated using both the QAPPA of February 2023 and the Program QAPP dated October 2022. The Massachusetts Compendium of Analytical Methods (CAM) and/or SW-846 Methods were used to perform the analyses. Therefore, site data were also evaluated using CAM quality control (QC) limits, where applicable.

The analyte list reported by the laboratory was compared to the required analyte list per Table 2 (soil) in the QAPPA (February 2023) for the site. Results for all requested Aroclors were reported by the laboratory. MassDEP CAM target Aroclors 1262 and 1268 were also included in the laboratory report.

2. **Holding Time and Sample Preservation Compliance**

Receipt temperatures are acceptable (≤ 6°), as specified in the Program QAPP (October 2022).

PCBs: Holding time criteria (extracted within 14 days and analyzed within 40 days of extraction) met.

3. **Calibration Issues**

Not assessed for S2AVM data review.

Nobis Group®
585 Middlesex Street
Lowell, MA 01851
T (978) 683-0891

4. **Laboratory and Field Blanks**

   PCBs: Results for PCB laboratory method blank MB 620-20843/1-A were non-detect. No blank actions are required.

   Field blanks were not submitted with this SDG. No action is required.

5. **Interference Check Sample (metals only)**

   Not applicable for this analysis.

6. **Surrogates**

   PCBs: Percent surrogate recoveries for the sample were within the Program QAPP limits of 30-150% except for the recovery of decachlorobiphenyl (DCB) on the primary analytical column (178%). The detected result for Aroclor 1254 in sample 2023-SB-12-0001 is qualified as estimated with a potential high bias (J+) due to the exceeded surrogate recovery.

7. **Laboratory Control Samples**

   PCBs: Percent recoveries of Aroclors 1016 and 1260 in LCS/LCSD pair 620-20843/2-A and 3-A met the Program QAPP recovery limits of 40-140% and RPD limits of ≤ 30% for soils. No actions are required.

8. **Matrix Spikes**

   MS/MSD analyses were not included in this SDG. No actions are required.

9. **Laboratory Duplicates (metals only)**

   Not applicable for this analysis.

10. **Serial Dilution (metals only)**

    Not applicable for this analysis.

11. **Field Duplicate Precision**

    Field duplicate samples were not included in this SDG. No actions are required.

12. **Internal Standards**

    Not applicable for this analysis.

13. **Dual Column Precision (PCBs only)**

    Laboratory data for PCB identification and quantitation are not a required deliverable for the MCP CAM for PCB analysis by GC. Therefore, dual column precision criteria could not be confirmed. However, the MCP CAM method does require a case narrative notation if the RPD for dual column results is > 40%. The laboratory case narrative did not include a notation for RPDs > 40% for PCB detections. No action is taken.

14. **Performance Evaluation Samples**

Performance Evaluation (PE) samples were not included in this SDG.

15. **Reporting Limits**

RLs for non-detect PCB results in sample 2023-SB-12-0001 met the Project Action Level (PAL) of 1 mg/kg for the site.

16. **Other**

Percent solids within Reg 1/NE criteria (> 30%). No action required.

Overall bias is considered indeterminate when cumulative nonconformances do not show a consistent bias or in cases of the presence of conflicting high and low biases.

Tier 1 Stage 2A Organic and Inorganic Data Review

Volatile Organic Compounds (VOCs by 8260C), Semivolatile Organic Compounds (SVOCs by 8270D), Polychlorinated Biphenyls (PCBs by 8082), Volatile Petroleum Hydrocarbons (VPH by MassDEP-VPH), Massachusetts Contingency Plan (MCP) Metals (MCP-14 Metals by 6010D/7471B), Perfluoroalkyl and Polyfluoroalkyl Substances (PFAS) by 537 (mod.)

15/Soil Samples: 2023-SB-02-0002, 2023-SB-02-0204, 2023-SB-02-0406, 2023-SB-02-0608, 2023-SB-02-0810, 2023-SB-02-1012, 2023-SB-01-0002, 2023-SB-01-0204, 2023-SB-01-0406, 2023-SB-01-0608, 2023-SB-01-0810, 2023-SB-01-1012, 2023-FD-01, 2023-MW-01-0002, 2023-MW-01-0204
1/Field Duplicate Pair: 2023-SB-01-0406 and 2023-FD-01
1/Solid Trip Blank: TB-01-022723

Dear Mr. Byrne:

Nobis Group (Nobis), under a USEPA contract as a subcontractor to KGSNE JV, LLC, performed a Tier 1 Stage 2A manual data review (S2AVM) on the organic and inorganic analytical data for the samples listed above. The samples were collected by Nobis at the American Tissue Mill Site located in Templeton, Massachusetts on February 27, 2023. The samples were analyzed for VOCs by EPA Method 8260C, SVOCs by EPA Method 8270D, Polychlorinated Biphenyls by EPA Method 8082, VPHs by MassDEP-VPH, MCP-14 Metals/Mercury by EPA Method 6010D/7471B, and PFAS by EPA Method 537 (Modified) by Eurofins New England in North Kingstown, RI, Eurofins Northeast in Amherst, NY (MassDEP-VPH analyses), and Eurofins Lancaster Laboratory in Lancaster, PA (for metals/mercury, and PFAS analyses).

The Tier 1 Stage 2A manual data review was performed in accordance with the Region 1 - EPA New England Environmental Data Review Supplement for Region 1 Data Review Elements and Superfund Specific Guidance/Procedures (September 2020); USEPA's National Functional Guidelines for Organic Superfund Methods Data Review (November 2020); USEPA's National Functional Guidelines for Inorganic Superfund Methods Data Review (November 2020); USEPA's Data Review and Validation Guidelines for Perfluoroalkyl Substances (PFASs) Analyzed Using EPA Method 537 (November 2018); the Program Quality Assurance Project

Nobis Group®

Plan (Program QAPP) (RFA# 12263), dated October 2022, and the Quality Assurance Project Plan Addendum (QAPPA) (February 2023) for the American Tissue Mill Site, which appends the October 2022 Program QAPP.

The data were evaluated based on the following parameters:

*	• Overall Evaluation of Data and Potential Usability Issues
*	• Data Completeness
*	• Preservation and Technical Holding Times
	• Blanks
	• Surrogates (organic analyses only)
NA	• Internal Standards
	• Matrix Spike Analysis
	• Laboratory Duplicates
	• Laboratory Control Samples (LCS)
*	• Field Duplicates
	• ICP Serial Dilutions (metals only)
NA	• Performance Evaluation (PE) Samples
NA	• Target Analyte Identification
	• Reported Quantitation Limits

* All criteria were met for this parameter or did not require qualification.
NA – Not applicable.

Overall Evaluation of Data and Potential Usability Issues

The site sampling objectives are:

- Characterize sub-surface soil for the presence of possible site-related contamination.
- Evaluate groundwater for the presence of possible site-related contamination.

Note that the PFAS analyses were inadvertently not included on the COC from Eurofins New England to Eurofins Lancaster Laboratory. The samples were analyzed for PFAS by Eurofins Lancaster, as otherwise indicated in the laboratory report. No actions are required.

The trip blank sample ID is listed as “Trip Blank” on the COC. The date of sample collection was appended to the sample ID during data validation for specificity.

Non-detect results for benzidine were rejected (R) in all soil samples due to low LCS/LCSD recovery. Non-detect results for two PFAS compounds were rejected (R) in one sample due to low surrogate recovery.

Reporting limits for non-detect results for 1,4-dichlorobenzene, bis(2-chloroethyl)ether, and hexachlorobenzene exceeded their associated project action limits (PALs) in the SVOC analysis of sample 2023-MW-01-0002.

The remaining data meet the project quality criteria and can be used without restriction except as summarized below. The attachments provide details and supporting documentation.

VOCs:
Results were qualified for LCS/LCSD exceedances and trip blank contamination.

SVOCs:
Benzidine results were rejected in all soil samples due to low LCS/LCSD recovery.

PCBs:
Qualification of the data was not required.

MassDEP-VPH:
Results were qualified for laboratory blank contamination.

MCP-14 Metals/Mercury:
Results were qualified for laboratory blank contamination, MS/MSD exceedances, serial dilution non-conformance, and laboratory duplicate imprecision.

PFAS:
Results were rejected for low surrogate recovery and qualified for surrogate recovery non-conformances.

Please contact Linda Terzis at lterzis@nobis-group.com should you have any questions or comments regarding this information.

Sincerely,

NOBIS GROUP®

Tier 1/Stage 2A Data Review Checklist

Project: American Tissue Mill, Templeton, Massachusetts
Targeted Brownfields Assessment (TBA)
Project #: S00001.02
Case#: NA
Date: 03/15/2023

Methods: Volatile Organic Compounds (VOCs) (8260C)
Semivolatile Organic Compounds (SVOCs) (8270D)
Polychlorinated Biphenyls (PCBs) (8082)
Volatile Petroleum Hydrocarbons (VPH) (MassDEP-VPH)
Massachusetts Contingency Plan (MCP) Metals (MCP-14 Metals by 6010D/7471B)
Perfluoroalkyl and Polyfluoroalkyl Substances (PFAS) (537 mod)

Laboratory: Eurofins New England, North Kingstown, RI; Eurofins Lancaster Laboratory, Lancaster, PA (Metals and PFAS); Eurofins Northeast, Amherst, NY (MassDEP-VPH)
SDG: 620100211
Reviewer: Linda Terzis

1. **Case Narrative and Data Package Completeness (COC and Analyte List Review)**
Fifteen (15) soil samples were listed on the COC for SDG 620100211, including one field duplicate sample. One trip blank sample was also included on the COC. All samples were collected on 02/27/2023. The samples were received at the Eurofins New England Laboratory on 02/27/2023 at 0.2, 3.4 and 3.6 °C. Samples for MassDEP-VPH analysis were subsequently shipped to Eurofins Northeast Laboratory and samples for MCP-14 metals/mercury and PFAS analyses were shipped to Eurofins Lancaster Laboratory for analysis. Samples were received at Eurofins Northeast and Lancaster Laboratory on 02/28/2023 at 2.0 and 1.4 °C, respectively.

Trip Blank-022723	620-10021-16	VOCs

Nobis Group®
585 Middlesex Street
Lowell, MA 01851
T (978) 683-0891

Note that the PFAS analyses were inadvertently not included on the COC from Eurofins New England to Eurofins Lancaster. The samples were analyzed for PFAS by Eurofins Lancaster, as otherwise indicated in the laboratory report.

The trip blank sample ID is listed as “Trip Blank” on the COC. The date of sample collection was appended to the sample ID during data validation for specificity.

The data were evaluated using the site-specific Quality Assurance Project Plan Addendum (QAPPA) (dated February 2023) and the Program QAPP (dated October 2022). Both were prepared by KGSNE, LLC. The QAPPA appends and incorporates by reference the procedures and quality control measures detailed in the Program QAPP (October 2022). Therefore, site data for this SDG were evaluated using both the QAPPA of February 2023 and the Program QAPP dated October 2022. The Massachusetts Compendium of Analytical Methods (CAM) and/or SW-846 Methods were used to perform the analyses. Therefore, site data were also evaluated using CAM quality control (QC) limits, where applicable.

The analyte lists reported by the laboratory were compared to the required analyte lists per Table 2 (soil) in the QAPPA (February 2023) for the site. All requested analytes were reported with the following notations:

VOCs: The laboratory reported results for all compounds specified on Table 2 of the QAPPA. Results for several additional VOCs were also reported by the laboratory. No actions are required.

SVOCs: The laboratory reported results for all SVOCs specified on Table 2 of the QAPPA except for 1,1’-biphenyl. Based on the QAPPA (February 2023), 1,1-biphenyl is not a compound of concern for the site. Results for several additional SVOCs were also reported by the laboratory. No actions are required.

PCBs: Results for all PCB Aroclors on Table 2 of the QAPPA were reported by the laboratory. Results for MassDEP CAM target Aroclors 1262 and 1268 were also included in the laboratory report. No actions are required.

MassDEP VPH: Results for all VPH parameters were reported by the laboratory. No inconsistencies were noted.

MCP-14 Metals/Mercury: The laboratory did not report results for aluminum, calcium, cobalt, copper, iron, magnesium, manganese, potassium, or sodium, which are included on Table 2 of QAPPA. The laboratory reported results for all CAM target analytes, which does not include these analytes.

PFAS: Results for all PFAS compounds on Table 2 of QAPPA were reported by the laboratory. Results for several additional PFAS compounds were also reported by the laboratory. No actions are required.

2. Holding Time and Sample Preservation Compliance

Receipt temperatures are acceptable (≤ 6°), as specified in the Program QAPP (October 2022).

VOCs: Holding time criteria (analyzed within 14 days) were met.

SVOCs: Holding time criteria (extracted within 14 days and analyzed within 40 days of extraction) were met.

PCBs: Holding time criteria (extracted within 14 days and analyzed within 40 days of extraction) met.

MassDEP-VPH: Holding time criteria (analyzed within 14 days) met.

MCP-14 Metals/Mercury: Holding time criteria (analyzed within 28 days for mercury; within 180 days for all other analytes) were met.

PFAS: Samples were extracted within the QAPP-specified holding time of 28 days from collection. Samples were analyzed within 40 days of extraction. No actions are taken.

3. Calibration Issues

Not assessed for S2AVM data review.

4. Laboratory and Field Blanks

VOCs: Acetone was detected in VOC laboratory method blank MB 620-20151/3-A at < reporting limit (RL). Acetone was also detected in the trip blank associated with the samples, at a slightly higher concentration than the laboratory blank concentration, but still < RL. Therefore, based on the National Functional Guidelines (NFGs, 2020), blank actions for acetone are taken based on the trip blank and discussed further below. Note that in this case, the blank actions for the laboratory blank and trip blank acetone detections are the same since both the laboratory and field blank results were < RL.

Trip blank sample Trip Blank-022723 (620-10021-16) is associated with the soil samples of this SDG. Acetone was detected at < RL in the trip blank. Results for acetone were non-detect in all soil samples except samples 2023-SB-01-0406 (620-10021-9) and 2023-SB-02-0204 (620-10021-2), where acetone was detected at < RL. Based on the NFGs (2020), the detected acetone results in samples 2023-SB-01-0406 and 2023-SB-02-0204 are qualified as non-detect at the RL (RL (U)).

Methylene chloride was detected in the trip blank at > RL. Methylene chloride results were non-detect in all samples except for sample 2023-MW-01-0204 (620-10021-15) where it was detected at < RL. Therefore, based on the NFGs (2020), the detected result for methylene chloride in sample 2023-MW-01-0204 was qualified as non-detect at the RL (RL (U)).

Toluene was also detected in the trip blank at > RL. Results for toluene were non-detect in all soil samples; therefore, no blank actions are required.

SVOCs: Results for laboratory blank MB 620-20217/1-A were all non-detect. No blank actions are required.

PCBs: Results for all PCB laboratory method blanks were non-detect. No blank actions are required.

MassDEP-VPH: Naphthalene and C9-C10 aromatics were detected in laboratory blank MB 480-660132/1-A at < RL. Results for C9-C10 aromatics were non-detect in all soil samples and no blank actions are required for C9-C10 aromatics. Naphthalene was detected in samples 2023-

SB-01-0204 (620-10221-1) and 2023-SB-02-0002 (620-10021-8) at < RL. Based on the NFGs (2020) for the VOC analysis, professional judgement was used to qualify the detected results for naphthalene in samples 2023-SB-01-0204 and 2023-SB-02-0002 as non-detect at the RL (RL (U)).

MCP-14 Metals/Mercury: Chromium was detected at < RL in laboratory method blank MB-410-349123/1-A. This method blank is associated with all soil samples except 2023-SB-02-0810 (620-10021-5). Chromium results in the associated samples were all > 10x the concentration in the method blank except in samples 2023-SB-02-1012 (620-10021-6), 2023-SB-01-0406 (620-10021-9), 2023-SB-01-0810 (620-10021-11), and 2023-FD-01 (620-10021-13). Based on the NFGs (2020) and professional judgement, detected chromium results <10x the blank contamination in these samples are qualified as estimated with a potential high bias (J+) due to the method blank contamination. Note that the final qualification is estimated with an indeterminate bias (J) due to MS/MSD recoveries, as further discussed below. Chromium results in the remaining samples are accepted unqualified since the chromium concentration in the method blank is considered to have an insignificant impact on the associated sample concentrations.

Beryllium was detected at < RL in laboratory method blank MB 410-349150/1-A. This method blank is associated with sample 2023-SB-02-0810 (620-10021-5). Beryllium was detected in the sample at a concentration > 10x the blank concentration; therefore, the beryllium concentration in the method blank is considered to have an insignificant impact on the associated sample concentration. No action is taken.

Results for mercury were non-detect in the laboratory method blanks. No blank actions are required.

PFAS: Results for PFAS were non-detect in laboratory method blank MB 410-349094/1-B. No blank actions are required.

No equipment blanks are associated with the samples of this SDG. No action required.

5. Interference Check Sample (metals only)

Not assessed for S2AVM data review.

6. Surrogates

The Program QAPP (October 2022) was used to evaluate site data for surrogate recovery. If no Program QAPP-specific recovery limits were available for a surrogate, the MCP CAM recovery limits were used.

VOCs: Percent surrogate recoveries for the samples were within the Program QAPP limits of 70-130%. No actions are required.

SVOC: Percent surrogate recoveries for the samples were within the Program QAPP limits of 30-130% for soil. No actions are required.

PCBs: Percent surrogate recoveries for the samples were within the Program QAPP limits of 30-150% on both analytical columns. No actions are required.

MassDEP-VPH: Percent surrogate recoveries for the samples were within the Program QAPP limits of 70-130%. No actions are required.

MCP-14 Metals/Mercury: Not applicable for this analysis.

PFAS: Percent recoveries of several surrogates were below the Program QAPP limits of 50-150% in several samples. Results for all PFAS compounds were non-detect in all soil samples. Based on the EPA Data Review and Validation Guidelines for PFAS Analyzed Using EPA Method 537 (November 2018), associated PFAS compound results were qualified as estimated (UJ) in the affected samples. One sample had surrogate recoveries < 10%; nondetect results for the associated compounds were rejected (R) in the affected sample. Refer to the Data Review Qualification Actions Table for action details.

7. Laboratory Control Samples

VOCs: Percent LCS/LCSD recovery limits in the Program QAPP are 70-130%. The MCP CAM recovery limits are 70-130% with expanded limits of 40-160% for compounds that are considered difficult to recover. All percent LCS/LCSD recoveries meet the Program QAPP recovery limits except for chloromethane (69%) and dichlorodifluoromethane (37%) in the analyses of LCS/LCSD pair 620-20151/1-A and 2-A. The MCP CAM identifies these two compounds as "potentially difficult"; therefore, the recovery limits of 40-160% apply for these two compounds. This LCS/LCSD pair is associated with all soil samples except samples 2023-SB-02-0810 (620-10021-5) and 2023-MW-01-0002 (620-10021-14). The NFGs (2020) do not include guidance for LCS results for the VOC analysis; therefore, professional judgement based on the MS/MSD guidance in the NFGs (2020) was used to qualify the non-detect results for dichlorodifluoromethane as estimated (UJ) in all soil samples except 2023-SB-02-0810 and 2023-MW-01-0002. RPDs met the Program QAPP limit of ≤ 20%.

The percent recoveries of dichlorodifluoromethane in LCS/LCSD pair 620-20238/1-A and 2-A were below the 70-130% limits but within the expanded limits of 40-160%. RPDs met the Program QAPP and MCP CAM limit of ≤ 20%. No actions are required.

SVOCs: The percent recoveries of benzidine in LCS/LCSD pair 620-20217/2-A and 3-A were below the Program QAPP and MCP CAM limits of 40-140% for base/neutral compounds (14% and 19%, respectively). Benzidine is not an MCP CAM compound identified as "potentially difficult". RPDs met the QAPP limit of ≤ 30% for all compounds except benzidine, where the RPD was 31%. This LCS/LCSD pair is associated with all soil samples in the SDG. Benzidine was non-detect in all samples. Based on the NFGs (2020), the non-detect results for benzidine are rejected (R) in all soil samples due to the low recoveries in the associated LCS/LCSD pair. Project objectives may be impacted.

PCBs: Percent recoveries of Aroclors 1016 and 1260 in LCS/LCSD pair 620-20161/2-A and 3-A and LCS/LCSD pair 620-20162/2-A and 3-A met the Program QAPP recovery limits of 40-140% and RPD limits of ≤ 30% for soils. No actions are required.

MassDEP-VPH: The percent recoveries in the VPH LCS/LCSD pair 480-660132/2-A and 3-A meet the Program QAPP recovery limits of 70-130%. All RPDs meet the Program QAPP RPD limit of ≤ 25%. No action is required.

MCP-14 Metals/Mercury: Percent recoveries for the metals and mercury LCS analyses were within the limits of 80-120%. The Program QAPP and MCP CAM recovery limits for soil are within vendor 95% confidence limits. Vendor limits were not presented in the laboratory report; the

laboratory used 80-120% as recovery limits based on the MassDEP CAM Method 6010D. Percent recoveries for metals ranged from 100% to 117%. The percent recovery for mercury was 100%. RPDs meet the Program QAPP limit of ≤ 30% for metals and mercury. Professional judgement was used to accept sample results for metals and mercury unqualified for LCS performance.

PFAS: Percent recoveries for the PFAS LCS 410-349094/2-B met the laboratory limits and no actions are required. Note that there is no MCP CAM method for the PFAS analysis and the Program QAPP does not include LCS recovery limits for PFAS. Therefore, the laboratory-established limits were used to evaluate the LCS results. LCS recoveries ranged from 75% to 96%. An LCSD was not analyzed for the PFAS analysis since MSD and/or laboratory duplicate analyses were provided in the laboratory report. Per the Program QAPP, an LCSD for the PFAS analysis is only required if MSD analyses are not provided. No actions are required.

8. Matrix Spikes

Based on the Region I EPA New England Environmental Data Review Supplement (Region I Supplement, 2020), MS/MSD qualifications are applied to all field samples with similar matrix.

Based on professional judgement, qualifications were applied to soil boring (SB) and monitoring well (MW) samples separately since MS/MSD analyses were performed for each sample type.

MS and/or MSD analyses were performed for the metals, mercury, and PFAS analyses only.

MCP-14 Metals/Mercury: MS/MSD analyses was performed on sample 2023-MW-01-0204 (620-10021-15). Percent recoveries for the MS and MSD analyses are all within the Program QAPP limits of 75-125% except for antimony in the MS analysis (68%) and lead, which was recovered at 28% in the MS analysis and 27% in the MSD analysis. A post-digest spike (PDS) analysis was not performed for lead (a PDS is not required for antimony). RPDs are ≤ 35% as specified in the QAPP. Antimony was not detected in the monitoring well (MW) soil samples. Based on the NFGs (2020), the non-detect results for antimony are qualified as estimated (UJ) in all MW soil samples due to the low recovery in the MS analysis. Lead was detected in the MW soil samples. The detected results for lead are qualified as estimated with a potential low bias (J-) in the MW soil samples due to MS/MSD recoveries < 30%. Note that the final qualification for lead is estimated with an indeterminate bias (J) due to poor laboratory duplicate precision as further discussed below.

MS/MSD analyses were also performed on sample 2023-SB-02-0810 (620-10021-5). Barium recoveries exceeded the QAPP limits of 75-125% (135% and 27%, respectively) and the RPD exceeded the limit of ≤ 35% (49%). Based on the NFGs (2020), professional judgement was used to qualify the detected barium results as estimated with an indeterminate bias (J) in all SB soil samples due to the high and low MS/MSD recoveries.

Percent recoveries for chromium, vanadium, and zinc were < 75% but > 30% in the MSD analysis of sample 2023-SB-02-0810 (620-10021-5). These analytes were detected in all soil samples. Based on the NFGs (2020), detected results for chromium, vanadium, and zinc are qualified as estimated with a potential low bias (J-) in all SB samples due to the low recoveries. Note that the final qualification for chromium is estimated with an indeterminate bias (J) in samples 2023-SB-02-1012, 2023-SB-01-0406, 2023-SB-01-0810, and 2023-FD-01 due to blank actions, as discussed above.

The percent recovery of lead in the MSD analysis of sample 2023-SB-02-0810 (620-10021-5) was < 30%. Lead was detected in all SB soil samples. Based on the NFGs (2020), detected lead results in all SB soil samples are qualified as estimated with a potential low bias (J-) due to the MSD results.

MS/MSD analyses for mercury were performed on sample 2023-MW-01-0204 (620-10021-15). Percent recoveries for mercury met the Program QAPP limits of 75-125% and RPD ≤ 35%. No action is required.

PFAS: MS/MSD analyses were performed on sample 2023-MW-01-0204 (620-10021-15). Percent recoveries for all PFAS compounds met the laboratory-established limits and no actions are required. Note that there is no MCP CAM method for the PFAS analysis and the Program QAPP did not include MS/MSD recovery limits for PFAS. Therefore, the laboratory-established recovery and RPD limits were used to evaluate the MS/MSD results. MS/MSD recoveries ranged from 77% to 97% and RPDs were all < 30%. No actions are required.

8. Laboratory Duplicates (metals only)

MCP-14 Metals/Mercury: Laboratory duplicate analyses were performed on samples 2023-MW-01-0204 (620-10021-15) and 2023-SB-02-0810 (620-10021-5).

Program QAPP laboratory duplicate criteria (≤ 35% RPD) were met for all analytes for the duplicate analysis performed on sample 2023-MW-01-0204 except for lead and zinc, where the RPDs were > 35% (38% and 40%, respectively). Results for lead and zinc in the sample and duplicate analyses were > 5x RL. Based on the NFGs (2020), the detected results for lead and zinc are qualified as estimated (J) in all MW soil samples due to poor laboratory duplicate precision.

Program QAPP laboratory duplicate criteria (≤ 35% RPD) were met for all analytes for the duplicate analysis performed on sample 2023-SB-02-0810. No actions are required.

The RPD for the laboratory duplicate analysis performed on sample 2023-MW-01-0204 for mercury was > 35% (48%). Sample and duplicate results for mercury were < RL and already reported by the laboratory as estimated (J). The absolute difference between the sample and duplicate results was < RL; therefore, based on the NFGs (2020), no action is required.

Results for mercury were non-detect in the sample and laboratory duplicate analysis performed on sample 2023-SB-02-0810. Laboratory duplicate precision criteria is acceptable and no actions are required.

Note that Table 2-12-2 of the Program QAPP lists a laboratory duplicate as a QC sample for the PFAS analysis with no associated QC limit. A laboratory duplicate analysis was not reported by the laboratory. The EPA Data Review and Validation Guidelines for PFAS Analyzed using EPA Method 537 (2018) does not include discussion of laboratory duplicate analyses. No actions are taken.

9. Serial Dilution (metals only)

MCP-14 Metals/Mercury: A serial dilution analysis was not performed for this SDG. The Massachusetts CAM requires a serial dilution analysis on samples used for MS/MSD analyses where analytes are detected at > 50x RL. MS/MSD analyses were performed on samples 2023-SB-02-0810 and 2023-MW-01-0204 for this SDG. Detected analyte results were < 50x RL for

both samples except for barium in 2023-SB-02-0810, which was detected at 65.8 mg/kg with an RL of 0.462 mg/kg. Soil sample results for barium were all detected. Based on the NFGs, detected results are qualified as estimated (J) if a serial dilution analysis is not performed. Detected results for barium were previously qualified as estimated (J) in all SB soil samples due to MS/MSD results, as discussed above, and further action is not required. There are no serial dilution criteria included in the Program QAPP.

10. Field Duplicate Precision

The field duplicate pair 2023-SB-01-0406 (620-10021-9) / 2023-FD-01 (620-10021-13) is associated with the soil samples of this SDG. Acceptable field duplicate precision is an RPD of ≤ 50% for results > 5x RL and an absolute difference < 4x RL for results < 5x RL, based on the Region 1 EPA New England Environmental Data Review Supplement (September 2020).

Based on Region 1 guidelines, qualifications are applied to all field samples with similar matrix.

Field precision criteria were met for the VOC, SVOC, PCB, MassDEP VPH, MCP-14 Metals, and PFAS analyses. No actions are required.

11. Internal Standards

Not assessed for S2AVM data review.

12. Dual Column Precision (PCBs only)

Laboratory data for PCB identification and quantitation is not a required deliverable for the MCP CAM method for PCB analysis by GC. Therefore, dual column precision criteria could not be confirmed. However, the MCP CAM method does require a case narrative notation if the RPD for dual column results is > 40%. The laboratory case narrative did not include a notation for RPDs > 40% for PCB detections. No action is taken.

13. Performance Evaluation Samples

Performance Evaluation (PE) samples were not included in this SDG.

14. Reporting Limits

RLs for on-detect results for VOCs, PCBs, MassDEP-VPH, and MCP-14 metals/mercury analyses met the Project Action Levels (PALs) for the site.

SVOC RLs for non-detect results meet PALs except for 1,4-dichlorobenzene, bis(2-chloroethyl)ether, and hexachlorobenzene in sample 2023-MW-01-0002 (620-10021-14). PALs for 1,4-dichlorobenzene, bis(2-chloroethyl)ether, and hexachlorobenzene are 1 mg/kg, 0.7 mg/kg, and 0.7 mg/kg, respectively. The non-detect RLs for these compounds are 1.76 mg/kg, 0.889 mg/kg, and 0.889 mg/kg, respectively. Site objectives may be impacted.

Note there are no PALs associated with the PFAS analysis.

15. Other

EPA Region 1 Supplement (2020) criterion for percent solids content (> 30%) was met for all soil samples. No action required.

Overall bias is considered indeterminate when cumulative nonconformances do not show a consistent bias or in cases of the presence of conflicting high and low biases.

Field Duplicate Evaluation

Project/Site: American Tissue Mill - Templeton, MA

Qualifiers

GC/MS VOA

Qualifier	Qualifier Description
*-	LCS and/or LCSD is outside acceptance limits, low biased.
B	Compound was found in the blank and sample.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

GC/MS Semi VOA

Qualifier	Qualifier Description
*-	LCS and/or LCSD is outside acceptance limits, low biased.
*1	LCS/LCSD RPD exceeds control limits.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
S1+	Surrogate recovery exceeds control limits, high biased.

GC VOA

Qualifier	Qualifier Description
B	Compound was found in the blank and sample.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

LCMS

Qualifier	Qualifier Description
*5-	Isotope dilution analyte is outside acceptance limits, low biased.

Metals

Qualifier	Qualifier Description
^3+	Reporting Limit Check Standard is outside acceptance limits, high biased
B	Compound was found in the blank and sample.
F1	MS and/or MSD recovery exceeds control limits.
F2	MS/MSD RPD exceeds control limits
F3	Duplicate RPD exceeds the control limit
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

General Chemistry

Qualifier	Qualifier Description
F3	Duplicate RPD exceeds the control limit

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated

Glossary (Continued)

Abbreviation	These commonly used abbreviations may or may not be present in this report.
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

MassDEP Analytical Protocol Certfication Form

Laboratory Name: Eurofins New England | Project #: 620-10021-1

Project Location: American Tissue Mill - Templeton, MA | RTN:

This Form provides certifications for the following data set: list Laboratory Sample ID Number(s):
620-10021-1 through 620-10021-16

Matrices: ☐ Groundwater/Surface Water ☑ Soil/Sediment ☐ Drinking Water ☐ Air ☐ Other:

CAM Protocol (check all that apply below:)

8260 VOC CAM II A ☑	7470/7471 Hg CAM III B ☑	MassDEP VPH (GC/PID/FID) CAM IV A ☑	8082 PCB CAM V A ☑	9014 Total Cyanide/PAC CAM VI A ☐	6860 Perchlorate CAM VIII B ☐
8270 SVOC CAM II B ☑	7010 Metals CAM III C ☐	MassDEP VPH (GC/MS) CAM IV C ☐	8081 Pesticides CAM V B ☐	7196 Hex Cr CAM VI B ☐	MassDEP APH CAM IX A ☐
6010 Metals CAM III A ☑	6020 Metals CAM III D ☐	MassDEP EPH CAM IV B ☐	8151 Herbicides CAM V C ☐	8330 Explosives CAM VIII A ☐	TO-15 VOC CAM IX B ☐

Affirmative Responses to Questions A through F are required for "Presumptive Certainty" status

A	Were all samples received in a condition consistent with those described on the Chain-of-Custody, properly preserved (including temperature) in the field or laboratory, and prepared/analyzed within method holding times?	☑ Yes ☐ No
B	Were the analytical method(s) and all associated QC requirements specified in the selected CAM protocol(s) followed?	☑ Yes ☐ No
C	Were all required corrective actions and analytical response actions specified in the selected CAM protocol(s) implemented for all identified performance standard non-conformances?	☑ Yes ☐ No
D	Does the laboratory report comply with all the reporting requirements specified in CAM VII A, "Quality Assurance and Quality Control Guidelines for the Acquisition and Reporting of Analytical Data"?	☑ Yes ☐ No
E	VPH, EPH, APH, and TO-15 only a. VPH, EPH, and APH Methods only: Was each method conducted without significant modification(s)? (Refer to the individual method(s) for a list of significant modifications). b. APH and TO-15 Methods only: Was the complete analyte list reported for each method?	☑ Yes ☐ No ☐ Yes ☐ No
F	Were all applicable CAM protocol QC and performance standard non-conformances identified and evaluated in a laboratory narrative (including all "No" responses to Questions A through E)?	☑ Yes ☐ No

Responses to Questions G, H and I below are required for "Presumptive Certainty" status

G	Were the reporting limits at or below all CAM reporting limits specified in the selected CAM protocol(s)?	☑ Yes ☐ No[1]

Data User Note: Data that achieve "Presumptive Certainty" status may not necessarily meet the data usability and representativeness requirements described in 310 CMR 40. 1056 (2)(k) and WSC-07-350.

H	Were **all** QC performance standards specified in the CAM protocol(s) achieved?	☐ Yes ☑ No[1]
I	Were results reported for the complete analyte list specified in the selected CAM protocol(s)?	☑ Yes ☐ No[1]

1 All negative responses must be addressed in an attached laboratory narrative.

I, the undersigned, attest under the pains and penalties of perjury that, based upon my personal inquiry of those responsible for obtaining the information, the material contained in this analytical report is, to the best of my knowledge and belief, is accurate and complete.

Signature: Agnes R Huntley **Position:** Project Manager

Printed Name: Agnes Huntley **Date:** 03/14/2023

Job ID: 620-10021-1

Laboratory: Eurofins New England

Narrative

Job Narrative
620-10021-1

Receipt
The samples were received on 2/27/2023 4:50 PM. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice. The temperature of the cooler at receipt was 3.6º C.

GC/MS VOA
Method 8260C: The continuing calibration verification (CCV) associated with batch 620-20152 exhibited % difference of > 20% for the following analyte: Vinyl chloride; however, the results of the LCS were within the CCV acceptance limits. The EPA method requires that all target analytes in the continuing calibration verification standard be within 20% difference from the initial calibration. According to the laboratory standard operating procedure, the LCS is acceptable if it meets the CCV acceptance criteria.

Method 8260C: The laboratory control sample (LCS) and / or the laboratory control sample duplicate (LCSD) for batch 620-20152 recovered outside control limits but were greater than 10% for the following analytes: Dichlorodifluoromethane and Chloromethane . MCP protocol allows for 10% of the target compounds to be outside of the limits provided the recoveries are over 10%. The associated samples are: (LCS 620-20151/1-A) and (LCSD 620-20151/2-A).

Method 8260C: The large number of analytes included in the continuing calibration verification (CCV) gives a high probability that one or more analytes will be outside acceptance criteria. As indicated in the reference method, analysis may proceed as long as no more than 20% of the analytes of interest are outside the method-defined %D criteria. Affected analyte: Dichlorodifluoromethane.
(CCVIS 620-20152/3)

Method 8260C: The laboratory control sample and the laboratory control sample duplicate (LCS/LCSD) for preparation batch 620-20238 and analytical batch 620-20239 recovered outside control limits for the following analyte: Dichlorodifluoromethane, which has been identified as a poor performing analyte when analyzed using this method. According to MCP requirements, poor performers are allowed to recover within 40-160%; therefore, re-extraction/re-analysis was not performed. These results have been reported and qualified.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

GC/MS Semi VOA
Method 8270D: The laboratory control sample and/or the laboratory control sample duplicate (LCS/LCSD) for preparation batch 620-20217 and analytical batch 620-20317 recovered outside control limits for the following analyte(s): Benzidine has been identified as a poor performing analyte when analyzed using this method; therefore, re-extraction/re-analysis was not performed. Batch precision also exceeded control limits for these analyte(s). These results have been reported and qualified.

Method 8270D: The following analytes have been identified, in the reference method and/or via historical data, to be poor and/or erratic performers: Benzidine. These analytes may have a %D >60%.

Method 8270D: The following sample(s) is a QA/QC reference sample and is not subject to holding time. (620-9817-A-51-A MDLS).

Method 8270D: The RPD of the laboratory control sample (LCS) and laboratory control sample duplicate (LCSD) for preparation batch 620-20217 and analytical batch 620-20317 recovered outside control limits for the following analytes: Benzidine.

Method 8270D: The large number of analytes included in the continuing calibration verification (CCV) (CCVIS 620-20349/4) gives a high probability that one or more analytes will be outside acceptance criteria. As indicated in the MCP method, analysis may proceed as long as no more than 20% of the analytes of interest are outside the method-defined %D criteria. 1,2,4,5-Tetrachlorobenzene, 2,4-Dinitrophenol, Benzidine, Bis(2-ethylhexyl) phthalate, Carbazole, Di-n-butyl phthalate, Di-n-octyl phthalate and Pentachloronitrobenzene.

Method 8270D: Six surrogates are used for this analysis. The laboratory's SOP allows one acid and one base of these surrogates to be outside acceptance criteria without performing re-extraction/re-analysis. The following sample contained an allowable number of surrogate compounds outside limits: 2023-MW-01-0002' (620-10021-14). These results have been reported and qualified.

Method 8270D: The continuing calibration verification (CCV) associated with batch 620-20349 recovered above the upper control limit for

Job ID: 620-10021-1 (Continued)

Laboratory: Eurofins New England (Continued)

Bis(2-ethylhexyl) phthalate and Di-n-butyl phthalate. The following samples had detections above the reporting limit for these analytes: 2023-SB-02-0002' (620-10021-1), 2023-SB-01-0002' (620-10021-7), 2023-FD-01 (620-10021-13) and 2023-MW-01-0002' (620-10021-14). The results are considered bias high.

Method 8270D: The large number of analytes included in the continuing calibration verification (CCV) (CCVIS 620-20386/3) gives a high probability that one or more analytes will be outside acceptance criteria. As indicated in the reference method, analysis may proceed as long as no more than 10% of the analytes of interest are outside the method-defined %D criteria. 1,2,4,5-Tetrachlorobenzene, Benzidine, Di-n-butyl phthalate, Di-n-octyl phthalate, Hexachlorobutadiene and Pentachloronitrobenzene.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

GC VOA

Method MAVPH: The method blank for preparation batch 480-660132 and analytical batch 480-660138 contained Naphthalene and C9-C10 Aromatics above the method detection limit. This target analyte concentration was less than the reporting limit (RL); therefore, re-extraction and/or re-analysis of samples was not performed.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

GC Semi VOA

No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Metals

No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

LCMS

Method 537 (modified): The LCS labeled isotope(s): d5-NEtPFOSA recovery associated with samples: 2023-SB-02-0002' (620-10021-1), 2023-SB-02-0204' (620-10021-2), 2023-SB-02-0406' (620-10021-3), 2023-SB-02-0608' (620-10021-4), 2023-SB-02-0810' (620-10021-5), 2023-SB-02-1012' (620-10021-6), 2023-SB-01-0002' (620-10021-7), 2023-SB-01-0406' (620-10021-9), 2023-SB-01-0608' (620-10021-10), 2023-SB-01-0810' (620-10021-11), 2023-SB-01-1012' (620-10021-12), 2023-FD-01 (620-10021-13), 2023-MW-01-0002' (620-10021-14) and 2023-MW-01-0204' (620-10021-15) is outside the QC acceptance limits. Since the recovery for target analytes is within the limits, the data is reported.

Method 537 (modified): Isotope dilution analyte (IDA) recoveries for d3-NMeFOSAA and d5-NEtFOSAA were outside QC acceptance criteria in sample 2023-SB-01-0204' (620-10021-8). The isotope dilution technique corrects the results for the target analytes for any losses that occur during the sample extraction and/or concentration. For all IDAs, the signal to noise was greater than 10:1, therefore the data is reported.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

General Chemistry

No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Organic Prep

No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Accreditation/Certification Summary

Client: Nobis Engineering, Inc. Job ID: 620-10021-1
Project/Site: American Tissue Mill - Templeton, MA

Laboratory: Eurofins New England

Unless otherwise noted, all analytes for this laboratory were covered under each accreditation/certification below.

Authority	Program	Identification Number	Expiration Date
Massachusetts	State	M-RI907	06-30-23

The following analytes are included in this report, but the laboratory is not certified by the governing authority. This list may include analytes for which the agency does not offer certification.

Analysis Method	Prep Method	Matrix	Analyte
8082	3540C	Solid	PCB-1016
8082	3540C	Solid	PCB-1221
8082	3540C	Solid	PCB-1232
8082	3540C	Solid	PCB-1242
8082	3540C	Solid	PCB-1248
8082	3540C	Solid	PCB-1254
8082	3540C	Solid	PCB-1260
8082	3540C	Solid	PCB-1262
8082	3540C	Solid	PCB-1268
8260C	5035	Solid	1,1,1,2-Tetrachloroethane
8260C	5035	Solid	1,1,1-Trichloroethane
8260C	5035	Solid	1,1,2,2-Tetrachloroethane
8260C	5035	Solid	1,1,2-Trichloroethane
8260C	5035	Solid	1,1,2-Trichlorotrifluoroethane (Freon 113)
8260C	5035	Solid	1,1-Dichloroethane
8260C	5035	Solid	1,1-Dichloroethene
8260C	5035	Solid	1,1-Dichloropropene
8260C	5035	Solid	1,2,3-Trichlorobenzene
8260C	5035	Solid	1,2,3-Trichloropropane
8260C	5035	Solid	1,2,4-Trichlorobenzene
8260C	5035	Solid	1,2,4-Trimethylbenzene
8260C	5035	Solid	1,2-Dibromo-3-Chloropropane

Tier 1 Stage 2A Organic and Inorganic Data Review:

Volatile Organic Compounds (VOCs by 8260C), Semivolatile Organic Compounds (SVOCs by 8270D), Polychlorinated Biphenyls (PCBs by 8082), Volatile Petroleum Hydrocarbons (VPH by MassDEP-VPH), Massachusetts Contingency Plan (MCP) Metals (MCP-14 Metals by 6010D/7471B), Perfluoroalkyl and Polyfluoroalkyl Substances (PFAS) by 537 (mod.)

44/Soil Samples: 2023-MW-06-0002, 2023-MW-06-0204, 2023-MW-06-0406, 2023-MW-06-0608, 2023-MW-06-0810, 2023-MW-06-1012, 2023-SB-08-0002, 2023-SB-08-0204, 2023-SB-08-0406, 2023-SB-08-0608, 2023-SB-08-0810, 2023-SB-08-1012, 2023-SB-12-0002, 2021-SB-12-0204, 2023-SB-12-0406, 2023-SB-12-0608, 2023-SB-12-0810, 2023-SB-12-1012, 2023-SB-07-0002, 2023-SB-07-0204, 2023-SB-07-0406, 2023-SB-07-0608, 2023-SB-07-0810, 2023-SB-07-1012, 2023-MW-05-0002, 2023-MW-05-0204, 2023-MW-05-0608, 2023-MW-05-0810, 2023-MW-05-1012, 2023-MW-05-0406, 2023-FD-06, 2023-FD-07, 2023-SB-06-0002, 2023-SB-06-0204, 2023-SB-06-0406, 2023-SB-06-0608, 2023-SB-06-0810, 2023-SB-06-1012, 2023-SB-05-0002, 2023-SB-05-0204, 2023-SB-05-0406, 2023-SB-05-0608, 2023-SB-05-0810, 2023-SB-05-1012
2/Field Duplicate Pairs: 2023-SB-07-0406 / 2023-FD-06 and 2023-SB-06-0406 / 2023-FD-07
2/Solid Trip Blanks: Trip Blank-05, Trip Blank-06

Dear Mr. Byrne:

Nobis Group (Nobis), under a USEPA contract as a subcontractor to KGSNE JV, LLC, performed a Tier 1 Stage 2A manual data review (S2AVM) on the organic and inorganic analytical data for the samples listed above. The samples were collected by Nobis at the American Tissue Mill Site located in Templeton, Massachusetts on March 2, 2023 and March 3, 2023. The samples were analyzed for VOCs by EPA Method 8260C, SVOCs by EPA Method 8270D, Polychlorinated Biphenyls by EPA Method 8082, VPHs by MassDEP-VPH, MCP-14 Metals by EPA Method 6010D/7471B, and PFAS by EPA Method 537 mod. by Eurofins New England in North Kingstown, RI, Eurofins Northeast in Amherst, NY (MassDEP-VPH analyses), and Eurofins Lancaster Laboratories in Lancaster, PA (for MCP-14 metals/mercury and PFAS analyses).

Nobis Group®
585 Middlesex Street
Lowell, MA 01851
T (978) 683-0891

The Tier 1 Stage 2A manual data review was performed in accordance with the Region 1 - EPA New England Environmental Data Review Supplement for Region 1 Data Review Elements and Superfund Specific Guidance/Procedures (September 2020); USEPA's National Functional Guidelines for Organic Superfund Methods Data Review (November 2020); USEPA's National Functional Guidelines for Inorganic Superfund Methods Data Review (November 2020); USEPA's Data Review and Validation Guidelines for Perfluoroalkyl Substances (PFASs) Analyzed Using EPA Method 537 (November 2018); the Program Quality Assurance Project Plan (Program QAPP) (RFA# 12263), dated October 2022, and the Quality Assurance Project Plan Addendum (QAPPA) (February 2023) for the American Tissue Mill Site, which appends the October 2022 Program QAPP.

The data were evaluated based on the following parameters:

*	• Overall Evaluation of Data and Potential Usability Issues
*	• Data Completeness
*	• Preservation and Technical Holding Times
	• Blanks
	• Surrogates (organic analyses only)
NA	• Internal Standards
	• Matrix Spike Analysis
	• Laboratory Duplicates
	• Laboratory Control Samples (LCS)
	• Field Duplicates
NA	• ICP Serial Dilutions (metals only)
NA	• Performance Evaluation (PE) Samples
NA	• Target Analyte Identification
*	• Reported Quantitation Limits

* All criteria were met for this parameter or did not require qualification.
NA – Not applicable.

Overall Evaluation of Data and Potential Usability Issues

The site sampling objectives are:

- Characterize sub-surface soil for the presence of possible site-related contamination.
- Evaluate groundwater for the presence of possible site-related contamination.

The non-detect result for benzidine in one sample was rejected (R) due to MS/MSD recovery. The non-detect result for the PFAS compound NMeFOSAA was rejected (R) in one soil sample due to low surrogate recovery.

Reporting limits for non-detect PCB Aroclor results exceeded the PAL of 1 mg/kg in three samples due to sample dilutions required to report PCB results. The dilution factor was 50x for all 3 samples. In addition, RLs for non-detect thallium results exceeded the PAL of 8 mg/kg in two samples due to the 10x dilution required to report other target analytes. Site objectives may be impacted.

The remaining data meet the project quality criteria and can be used without restriction except as summarized below. The attachments provide details and supporting documentation.

VOCs:
Results were qualified for laboratory blank contamination and MS/MSD exceedances.

SVOCs:
The benzidine result for one sample was rejected due to MS/MSD recoveries and results were qualified due to laboratory blank contamination, LCS/LCSD exceedances, and MS/MSD exceedances.

PCBs:
Results were qualified for MS/MSD imprecision and field duplicate imprecision.

MassDEP-VPH:
Results were qualified for laboratory blank contamination.

MCP-14 Metals and Mercury:
Results were qualified for MS/MSD exceedances and laboratory duplicate imprecision.

PFAS:
One result was rejected for low surrogate recovery (< 10%) and several results were qualified due to surrogate recovery exceedances.

Please contact Linda Terzis at lterzis@nobis-group.com should you have any questions or comments regarding this information.

Sincerely,

NOBIS GROUP®

Tier 1/Stage 2A Data Review Checklist

Project: American Tissue Mill, Templeton, Massachusetts
Targeted Brownfields Assessment (TBA)
Project #: S00001.02
Case#: NA
Date: 04/07/2023
Methods: Volatile Organic Compounds (VOCs) (8260C)
Semivolatile Organic Compounds (SVOCs) (8270D)
Polychlorinated Biphenyls (PCBs) (8082)
Volatile Petroleum Hydrocarbons (VPH) (MassDEP-VPH)
Massachusetts Contingency Plan (MCP) Metals (MCP-14 Metals by 6010D/7471B)
Perfluoroalkyl and Polyfluoroalkyl Substances (PFAS) (537 mod.)

Laboratory: Eurofins New England, North Kingstown, RI; Eurofins Lancaster Laboratory, Lancaster, PA (Metals and PFAS); Eurofins Northeast, Amherst, NY (MassDEP-VPH)
SDG: 620101171
Reviewer: Linda Terzis

1. **Case Narrative and Data Package Completeness (COC and Analyte List Review)**
Forty-four (44) soil samples, including two field duplicate samples, were listed on the COC for SDG 620101171. Two trip blank samples were also included on the COC. The samples were collected on 03/02/2023 and 03/03/2023 and received at the Eurofins New England Laboratory on 03/03/2023 at temperatures ranging from 0.2 and 2.6 °C. Samples for MassDEP-VPH analysis were subsequently shipped to Eurofins Northeast Laboratory and samples for MCP-14 metals/mercury and PFAS analyses were shipped to Eurofins Lancaster Laboratory for analysis. Samples were received at Eurofins Northeast on 03/04/2023 at 2.1 °C. Samples were received at Eurofins Lancaster Laboratory on 03/04/2023 at 0.4 and 1.3 °C.

The data were evaluated using the site-specific Quality Assurance Project Plan Addendum (QAPPA) (dated February 2023) and the Program QAPP (dated October 2022). Both were prepared by KGSNE, LLC. The QAPPA appends and incorporates by reference the procedures and quality control measures detailed in the Program QAPP (October 2022). Therefore, site data for this SDG were evaluated using both the QAPPA of February 2023 and the Program QAPP dated October 2022. The Massachusetts Compendium of Analytical Methods (CAM) and/or SW-846 Methods were used to perform the analyses. Therefore, site data were also evaluated using CAM quality control (QC) limits, where applicable.

The analyte lists reported by the laboratory were compared to the required analyte lists per Table 2 (soil) in the QAPPA (February 2023) for the site. All requested analytes were reported with the following notations:

VOCs: The laboratory reported results for all compounds specified on Table 2 of the QAPPA. Results for several additional VOCs were also reported by the laboratory. No actions are required.

SVOCs: The laboratory reported results for all SVOCs specified on Table 2 of the QAPPA except for 1,1'-biphenyl. Based on the QAPPA (February 2023), 1,1'-biphenyl is not a compound of

concern for the site. Results for several additional SVOCs were also reported by the laboratory. No action is required.

PCBs: Results for all PCB Aroclors on Table 2 of the QAPPA were reported by the laboratory. Results for MassDEP CAM target Aroclors 1262 and 1268 were also included in the laboratory report.

MassDEP-VPH: Results for all VPH parameters on Table 2 of the QAPPA were reported by the laboratory. No inconsistencies were noted.

MCP-14 Metals/Mercury: The laboratory did not report results for aluminum, calcium, cobalt, copper, iron, magnesium, manganese, potassium, or sodium, which are included on Table 2 of QAPPA. The laboratory reported results for all CAM target analytes, which do not include these analytes.

PFAS: Results for all PFAS compounds on Table 2 of QAPPA were reported by the laboratory. Results for several additional PFAS compounds were also reported by the laboratory. No actions are required.

2. Holding Time and Sample Preservation Compliance

Receipt temperatures are acceptable (≤ 6°), as specified in the Program QAPP (October 2022).

VOCs: Holding time criteria (analyzed within 14 days) were met.

SVOCs: Holding time criteria (extracted within 14 days and analyzed within 40 days of extraction) were met.

PCBs: Holding time criteria (extracted within 14 days and analyzed within 40 days of extraction) met.

MassDEP-VPH: Holding time criteria (analyzed within 14 days) met.

MCP-14 Metals/Mercury: Holding time criteria (analyzed within 28 days for mercury; within 180 days for all other analytes) were met.

PFAS: Samples were extracted within the QAPP-specified holding time of 28 days from collection. Samples were analyzed within 40 days of extraction. No actions are taken.

3. Calibration Issues

Not assessed for S2AVM data review.

4. Laboratory and Field Blanks

VOCs: Acetone was detected at < RL in several VOC laboratory method blanks. Results for acetone were non-detect in the associated samples except in samples 2023-SB-08-0406 (620-10117-9), 2023-SB-07-0406 (620-10117-21), 2023-MW-05-0406 (620-10117-30), and 2023-SB-05-0608 (620-10117-44), where acetone was detected at < RL. Based on the National Functional Guidelines (NFGs, 2020), detected acetone results are qualified as non-detect at the RL (RL [U]) in these samples due to laboratory blank contamination.

Methylene chloride was also detected at < RL in several VOC laboratory method blanks. Results for methylene chloride were non-detected in the associated samples except for sample 2023-SB-08-0810 (620-10117-11), where methylene chloride was detected at < RL. Based on the NFGs (2020), the detected methylene chloride result is qualified as non-detect at the RL (RL [U]) in this sample due to laboratory blank contamination.

Two trip blank samples are associated with the soil samples of this SDG (Trip Blank-05 and Trip Blank -06, both collected on 03/03/2023). Results for both trip blanks were non-detect. No actions are required based on the trip blank results.

SVOCs: Pentachlorophenol was detected at < RL in two SVOC laboratory method blanks. Results for pentachlorophenol were non-detect in all associated soil samples except sample 2023-SB-05-0406 (620-10117-43), where pentachlorophenol was detected at < RL. Based on the NFGs (2020), the detected result for pentachlorophenol in sample 2023-SB-05-0406 is qualified as non-detect at the RL (RL [U]) due to laboratory blank contamination.

PCBs: Results for all PCB laboratory method blanks were non-detect. No blank actions are required.

MassDEP-VPH: Naphthalene was detected at < RL in three VPH laboratory method blanks. Results for naphthalene were non-detect in the associated samples except for the samples summarized below.

Sample ID	Compound	Blank Result	Sample Result	Action*
2023-FD-06	Naphthalene	< RL	> RL	Result (U)
2023-MW-06-0002		< RL	< RL	RL (U)
2023-SB-05-0204		< RL	< RL	RL (U)
2023-SB-05-0406		< RL	< RL	RL (U)
2023-SB-06-0608		< RL	< RL	RL (U)
2023-SB-07-0406		< RL	< RL	RL (U)
2023-SB-12-0608		< RL	< RL	RL (U)
2023-SB-12-1012		< RL	< RL	RL (U)

* Professional judgement was used to base actions on the NFGs (2020) for VOC analysis.

MCP-14 Metals/Mercury: Results for all metals and mercury laboratory method blanks were non-detect. No blank actions are required.

PFAS: Results for PFAS were non-detect in all laboratory method blanks. No blank actions are required.

No equipment blanks are associated with the samples of this SDG. No action required.

5. Interference Check Sample (metals only)

Not assessed for S2AVM data review.

6. Surrogates

The Program QAPP (October 2022) was used to evaluate site data for surrogate recovery. If no Program QAPP-specific recovery limits were available for a surrogate, the MCP CAM recovery limits were used.

VOCs: Percent surrogate recoveries for the samples were within the Program QAPP limits of 70-130% except for the recoveries of 1,2-dichloroethane-d4 and dibromofluoromethane in samples 2023-SB-08-1012 (620-10117-12), 2023-SB-12-1012 (620-10117-18), and 2023-SB-07-0406 (620-10117-21), where recoveries exceeded the QAPP limits of 70-130%. Recoveries ranged from 131–165%. The samples were re-analyzed with similar results. Sample results for all VOCs were non-detect in the associated samples. Based on the NFGs (2020), the non-detect results are accepted unqualified since the potential bias is high. No actions are required.

The surrogate 4-bromofluorobenzene was recovered below the limits of 70-130% (68%) in sample 2023-SB0-05-0002 (620-10117-41). The sample was re-analyzed with acceptable surrogate recovery of all surrogates. Therefore, the laboratory reported results from the re-analysis of the sample and no actions are required.

SVOC: Percent surrogate recoveries for the samples were within the Program QAPP limits of 30-130% for soil. No actions are required.

PCBs: Percent surrogate recoveries for all samples were within the Program QAPP limits of 30-150% on both analytical columns except for the recoveries in samples 2023-SB-12-0002 (620-10117-13), 2023-SB-07-0406 (620-10117-21), 2023-MW-05-0002 (620-10117-25), 2023-FD-06 (620-10117-31), 2023-SB-06-0002 (620-10117-33), and 2023-SB-06-0204 (620-10117-34), where recoveries for both surrogates were not recovered on either analytical column due to sample dilutions of 20x, 50x, or 500x. No actions are required.

MassDEP-VPH: Percent surrogate recoveries for the samples were within the Program QAPP limits of 70-130%. No actions are required.

MCP-14 Metals/Mercury: Not applicable for this analysis.

PFAS: Percent recoveries of several surrogates did not meet the Program QAPP limits of 50-150% in several samples. Results for all PFAS compounds were non-detect in all soil samples except for one detect of PFHxA in sample 2023-SB-06-0810 and one detect of PFHxA in sample 2023-SB-06-1012. Recoveries for the associated surrogate (13C5 PFHxA) in these two samples exceeded 50-150% recovery. Based on the EPA Data Review and Validation Guidelines for PFAS Analyzed Using EPA Method 537 (November 2018), the detected results for PFHxA in samples 2023-SB-06-0810 and 2023-SB-06-1012 are qualified as estimated (J) due to the high surrogate recoveries. Note that both detections are < RL and are therefore already qualified (J) by the laboratory. Non-detect results with associated surrogate recovery below limits are qualified as estimated (UJ). Non-detect results with associated surrogate recovery above limits are accepted unqualified since the potential bias is high. Non-detect results with associated surrogate recoveries < 10% are rejected (R). Refer to the Data Review Qualification Actions Table for action details.

7. Laboratory Control Samples

VOCs: Percent LCS/LCSD recovery limits in the Program QAPP are 70-130%. The MCP CAM recovery limits are 70-130% with expanded limits of 40-160% for compounds that are considered difficult to recover. All percent LCS/LCSD recoveries meet the Program QAPP recovery limits of 70-130% except for dichlorodifluoromethane, bromomethane, chloroethane, and/or 1,1,2,2-tetrachloroethane in select LCS/LCSD pairs. The MCP CAM identifies these compounds as “potentially difficult” to recover; therefore, the recovery limits of 40-160% apply for these compounds. Recoveries for dichlorodifluoromethane, bromomethane, chloroethane, and 1,1,2,2-

tetrachloroethane meet the expanded limits of 40-160% and no action is required for these LCS/LCSD results.

The recovery of 1,2-dibromo-3-chloropropane in LCS 620-20516/1-A also exceeded 70-130% (139%) and is not considered a "potentially difficult" compound. This LCS is associated with the re-analysis of sample 2023-SB-12-1012 (620-10117-18), which was analyzed to confirm surrogate recoveries in the original analysis. The original analysis of the sample was reported and therefore, no actions are required.

SVOCs: LCS/LCSD percent recoveries met the Program QAPP limits of 40-140% for base/neutral compounds and 30-130% for acid compounds except for the percent recovery for benzoic acid in the LCSD of LCS/LCSD pair 620-20475-3-A (22%). Benzoic acid is not an MCP CAM compound identified as "potentially difficult". The RPD exceeded the QAPP limit of ≤ 30% (36%).

Results for benzoic acid were non-detect in all associated soil samples except for sample 2023-SB-12-0002 (620-10117-13) where benzoic acid was detected at > RL. Based on the NFGs (2020) for SVOC LCS/LCSD recovery, the detected benzoic acid result in sample 2023-SB-12-0002 is qualified as estimated with a potential low bias (J-). Note the final qualification was estimated (J) with an indeterminant bias. Professional judgement was used to qualify the non-detect results for benzoic acid in samples 620-10117-1 through 620-10117-12, and 620-10117-14 as estimated (UJ) rather than rejected (R) since the recoveries in the LCS of the pair and other LCS/LCSD pairs were acceptable.

PCBs: Percent recoveries of Aroclors 1016 and 1260 met the Program QAPP recovery limits of 40-140% and RPD limits of ≤ 30% in all LCS/LCSD pairs. No actions are required.

MassDEP-VPH: The percent recoveries in the VPH LCS/LCSD pairs met the Program QAPP recovery limits of 70-130%. All RPDs met the Program QAPP RPD limit of ≤ 25%. No actions are required.

MCP-14 Metals/Mercury: Percent recoveries for all metals and mercury LCS analyses were within the limits of 80-120%. The Program QAPP and MCP CAM recovery limits for soil are within vendor 95% confidence limits. Vendor limits were not presented in the laboratory report; the laboratory used 80-120% as recovery limits based on MassDEP CAM Method 6010D for aqueous samples. Professional judgement was used to accept sample results for metals and mercury unqualified for LCS performance since recoveries were all within 80-120% limits.

PFAS: Percent recoveries for all PFAS LCS analyses met the laboratory limits and no actions are required. Note that there is no MCP CAM method for the PFAS analysis and the Program QAPP did not include LCS recovery limits for PFAS. Therefore, the laboratory-established limits were used to evaluate the LCS results. An LCSD was not analyzed for the PFAS analysis since MSD and/or laboratory duplicate analyses were provided in the laboratory report. Per the Program QAPP, an LCSD for the PFAS analysis is only required if MSD analyses are not provided. No actions are required.

8. Matrix Spikes

Based on the Region I EPA New England Environmental Data Review Supplement (Region I Supplement, 2020), MS/MSD qualifications are applied to all field samples with similar matrix, unless otherwise indicated.

Based on professional judgement, qualifications were applied to soil boring (SB) and monitoring well (MW) samples separately, based on associated MS/MSD sample type.

VOCs: MS/MSD analyses were performed on samples 2023-SB-12-1012 (620-10117-18) and 2023-SB-05-0406 (620-10117-43). Percent recovery and RPD exceedances as well as actions taken are summarized in the tables below.

2023-SB-12-1012

Compound	% Recovery		RPD	Limits	Action*
	MS	MSD		(%R / RPD)	
Acetone	69	ok	40	70-130% / ≤ 30%	UJ
Acrylonitrile	69	ok	35		UJ
Carbon Tetrachloride	ok	0	NC		UJ
Chloroethane	140	ok	ok		A all SB samples
1,2-Dibromo-3-chloropropane	55	ok	42		UJ
4-Methyl-2-pentanone	60	ok	ok		UJ
Naphthalene	44	68	43		UJ all SB samples
Tetrahydrofuran	58	ok	34		UJ
tert-Butanol	53	ok	50		UJ
1,4-Dioxane	48	ok	46		UJ
Ethanol	64	ok	50		UJ
2-Hexanone	ok	ok	37		UJ

* Actions are based on the NFGs (2020). Professional judgement was used to apply actions for all compounds except chloroethane and naphthalene to the parent sample only since limits were met in the MS/MSD analyses for 2023-SB-05-0406, as shown below.
NC - Not Calculated
SB – Soil Boring

Professional judgement was used to qualify as estimated (UJ) rather than reject (R) the non-detect result for carbon tetrachloride in the parent sample since recovery was acceptable in the MS analysis. Parent sample results were non-detect for all compounds above. Chloroethane and naphthalene results were non-detect in all SB samples. No action is required for RPD since associated results were non-detect. Laboratory LCS/LCSD recoveries for the compounds above were acceptable.

2023-SB-05-0406

Compound	% Recovery		RPD	Limits	Action*
	MS	MSD		%R / RPD	
1,1,2-Trichlrofluoromethane	138	ok	ok	70-130% / ≤ 30%	A
Bromochloromethane	131	ok	ok		A
Bromodichloromethane	138	ok	ok		A
Chloroethane	133	ok	ok		A all SB samples
Dibromochloromethane	131	ok	ok		A
1,1-Dichloroethane	133	ok	ok		A
1,1-Dichloroethene	134	ok	ok		A
trans-1,2-Dichloroethene	134	ok	ok		A
1,2-Dichloropropane	133	ok	ok		A
Naphthalene	57	ok	ok		UJ all SB samples
1,1,2,2-Tetrachloroethane	131	ok	ok		A
Toluene	132	ok	ok		A
1,1,2-Trichloroethane	136	ok	ok		A
Trichlorofluoromethane	131	ok	ok		A
2-Hexanone	ok	ok	65		A

* Actions are based on the NFGs (2020). Professional judgement was used to apply actions for all compounds except chloroethane and naphthalene to the parent sample only since limits were met in the MS/MSD analyses for 2023-SB-12-1012, as shown above.
SB – Soil Boring

Parent sample results were non-detect for all compounds above. No action is required for RPD since associated results were non-detect. As previously noted, chloroethane and naphthalene results were non-detect in all SB samples. Laboratory LCS/LCSD recoveries for the compounds above were acceptable.

SVOCs: MS/MSD analyses were performed on samples 2023-SB-12-1012 (620-10117-18) and 2023-SB-05-0406 (620-10117-43). Percent recovery and RPD exceedances as well as actions taken are summarized in the tables below.

2023-SB-12-1012

Compound	% Recovery		RPD	Limits	Action*
	MS	MSD		(%R / RPD)	
Benzidine	0	0	NC	40-140% / ≤ 30%	R

* Actions are based on the NFGs (2020). Professional judgement was used to apply actions to parent sample only since actions based on the MS/MSD analyses for 2023-SB-05-0406 are dissimilar, as shown below.
NC – Not Calculated

Benzidine was not detected in the parent sample; therefore, the non-detect result was rejected.

2023-SB-05-0406

Compound	% Recovery		RPD	Limits	Action*
	MS	MSD		(%R / RPD)	
Benzidine	14	8	60	40-140% / ≤ 30%	J / UJ**
Benzoic acid	21	24	ok	30-130% / ≤ 30%	J

* Actions are based on the NFGs (2020). Professional judgement was used to apply actions for benzidine to all SB samples except 2023-SB-12-1012 since MS recovery for 2023-SB-05-0406 was > 10% in one of the MS/MSD pairs and to apply actions for benzoic acid to the parent sample only since results for benzoic acid were acceptable in the MS/MSD analyses of 2023-SB-12-1012.
** Professional judgement was used to qualify as estimated (UJ) rather than reject (R) non-detect results since the MS recovery was > 10%.
NC - Not Calculated

PCBs: Only Aroclors 1016 and 1260 were spiked in the MS/MSD; therefore, based on professional judgment, actions were applied to associated Aroclors:

If only 1016/1260 spiked into the MS/MSD, apply actions to the following Aroclors:
If 1016 %R or %RPD out: Qualify 1016, 1221, 1232, 1242
If 1260 %R or %RPD out: Qualify 1248, 1254, 1260, 1262,1268

MS/MSD analyses were performed on samples 2023-SB-12-1012 (620-10117-18) and 2023-SB-05-0406 (620-10117-43). Recoveries for Aroclor 1016 and 1260 meet the Program QAPP limits of 40-140% in the MS/MSD analyses of both parent samples. However, the RPDs for the Aroclor 1016 and Aroclor 1260 results in the MS/MSD analyses of 2023-SB-12-1012 exceed the Program QAPP limit of ≤ 30% (54% and 49%, respectively). Professional judgement was used to apply action for the RPD exceedances to the parent sample only since all MS/MSD limits were met for sample 2023-SB-05-0406. Based on the NFGs (2020), the detected result for Aroclor 1254 in sample 2023-SB-12-1012 is qualified as estimated (J) due to the high RPD. Non-detect results for

the remaining Aroclors reported for the sample are accepted unqualified for RPD exceedance, per the NFGs (2020). No actions are required for MS/MSD results for sample 2023-SB-05-0406.

MassDEP-VPH: MS/MSD analyses were performed on sample 2023-SB-12-1012 (620-10117-18) and 2023-SB-05-0406 (620-10117-43). Recoveries and RPDs met the Program QAPP limits of 70-130% recovery and ≤ 50% RPD. No actions are required.

MCP-14 Metals/Mercury: MS/MSD analyses for MCP-14 metals were performed on samples 2023-SB-12-1012 (620-10117-18) and 2023-SB-05-0406 (620-10117-43). Percent recoveries and actions taken are summarized below.

2023-SB-12-1012

Compound	% Recovery		Limits	Action*
	MS	MSD	%R	
Barium	208	130	75-125%	J+
Lead	157	ok		J+
Thallium	49	ok		UJ
Vanadium	134	ok		J+

* Actions are based on the NFGs (2020). Professional judgement was used to apply actions to the parent sample only since QAPP limits for these analytes were met in the MS/MSD analyses for 2023-SB-05-0406.

Barium, lead, and vanadium were detected in the parent sample (2023-SB-12-1012). Results for these analytes are qualified as estimated with a potential high bias (J+) due to the high recoveries. Thallium was non-detect in the parent sample and the result was qualified as estimated (UJ) due to the low recovery.

Recoveries for all analytes were within the 75-125% limits in the MS/MSD analysis of sample SB-05-0406. No actions are required.

Note that several RPDs reported by the laboratory exceeded the Program QAPP limit of ≤ 35% due primarily to the different spiking levels used for the MS and MSD samples. Therefore, precision could not be evaluated meaningfully based on the concentrations recovered. Professional judgement was used to evaluate precision by comparing the percent recoveries between the MS and MSD analyses. Percent recoveries between the MS and MSD analyses were similar and precision is deemed acceptable for all RPDs except barium, lead, and thallium for the MS/MSD results for 2023-SB-12-1012, where RPDs for the percent recoveries exceeded 35%. Professional judgement was used to qualify the barium and lead results as estimated (J) in parent sample 2023-SB-12-1012 with final qualifiers estimated (J) with an indeterminate bias due to qualifications based on the RPD results of percent recoveries. The non-detect thallium result was qualified as estimated (UJ) due to a low percent recovery as discussed above. Based on the NFGs (2020), further action is not required for thallium due to RPD results.

MS/MSD analyses were also performed on sample 2023-SB-12-0810 (620-10117-17) and 2023-SB-05-0002 (620-10117-41).

The recoveries for barium and lead exceeded the limits of 75-125% in the MS/MSD analyses for sample 2023-SB-12-0810. The recovery for antimony was below the limits of 75-125% (64%) in the MS analysis. Professional judgement was used to apply actions to the parent sample only since MS/MSD results for sample 2023-SB-05-0406 (620-10117-43) were acceptable. Therefore, based on the NFGs (2020), the detected results for barium and lead were qualified as estimated with a potential high bias (J+) and the non-detect antimony result was qualified as estimated (UJ) in parent sample 2023-SB-12-0810. Reported results for the MS and MSD analyses of thallium were “ND”. Note that the parent sample was run at a 10x dilution factor; therefore, spiked thallium

was likely diluted out by the dilution required to report thallium in the parent sample. Professional judgement was used to accept the non-detect thallium result in sample 2023-SB-12-0810. The MS and MSD samples were spiked at similar concentrations and the RPDs are < 35%.

The recoveries for lead were below the limits of 75-125% in the MS/MSD analysis of sample 2023-SB-05-002 (-5% and -11%, respectively). The concentration of lead in the parent sample was > 4x the spiking level in the MS/MSD samples; therefore, based on the NFGs (2020), no actions are required. The MS and MSD samples were spiked at similar concentrations and all RPDs are < 35%. Percent recoveries for all other analytes meet the 75-125% limits.

MS/MSD analyses for mercury were performed on samples 2023-SB-12-1012 (620-10117-18), 2023-SB-05-0406 (620-10117-43), 2023-SB-12-0810 (620-10117-17), 2023-SB-12-0204 (620-10117-14), and 2023-SB-05-0002 (620-10117-41). Percent recoveries and RPDs met the Program QAPP limits of 75-125% recovery and RPD ≤ 35% for all MS/MSD analyses except for the MS analysis of sample 2023-SB-12-0810 (620-10117-17) where the recovery was 131%. Professional judgement was used to apply actions only to the parent sample since mercury recoveries were acceptable for the other four SB MS/MSD analyses in this SDG. Mercury was not detected in sample 2023-SB-12-0810. Based on the NFGs, the non-detect result for mercury is accepted unqualified in this sample since the potential bias is high.

PFAS: MS/MSD analyses were performed on samples 2023-SB-12-1012 (620-10117-18), 2023-SB-05-0406 (620-10117-43), 2023-SB-05-0608 (620-10117-44), and 2023-SB-06-0608 (620-10117-36). Percent recoveries and RPDs for all PFAS compounds met the laboratory-established limits and no actions are required. Note that there is no MCP CAM method for the PFAS analysis and the Program QAPP did not include MS/MSD recovery limits for PFAS. Therefore, the laboratory-established recovery and RPD limits were used to evaluate the MS/MSD results. No actions are required.

9. Laboratory Duplicates (metals only)

MCP-14 Metals/Mercury: Laboratory duplicate analyses were performed on samples 2023-SB-12-1012 (620-10117-18), 2023-SB-05-0406 (620-10117-43), 2023-SB-12-0810 (620-10117-17), and 2023-SB-05-0002 (620-10117-41).

Program QAPP laboratory duplicate criteria (≤ 35% RPD) were met for all analytes for the duplicate analyses performed on samples 2023-SB-05-0406 and 2023-SB-05-0002. No actions are required.

Laboratory duplicate criteria (≤ 35% RPD) were exceeded for lead (RPD 45%) in sample 2023-SB-12-0810. The original sample result was < 5x RL while the duplicate result was > 5x RL. The absolute difference between the results was > RL. Based on the NFGs (2020), the detected lead result in sample 2023-SB-12-0810 is qualified as estimated (J) due to exceeded laboratory duplicate performance. Professional judgement was used to apply action to the parent sample only since lead met laboratory duplicate precision criteria in the other SB laboratory duplicate analyses.

Laboratory duplicate criteria were exceeded for zinc (48%) in sample 2023-SB-12-1012. The original and duplicate results were > 5x RL. Based on the NFGs (2020), the detected zinc result in sample 2023-SB-12-1012 is qualified as estimated (J) due to exceeded laboratory duplicate performance. Professional judgement was used to apply action to the parent sample only since zinc met laboratory duplicate precision criteria in the other SB laboratory duplicate analyses.

Laboratory duplicate analyses for mercury were performed on samples 2023-SB-12-1012 (620-10117-18), 2023-SB-05-0406 (620-10117-43), 2023-SB-12-0810 (620-10117-17), 2023-SB-12-0204 (620-10117-14), and 2023-SB-05-0002 (620-10117-41). Duplicate precision criteria (RPD ≤ 35%) were met for all five samples. Absolute differences for results < 5x RL were < the RL. No actions are required.

Note that Table 2-12-2 of the Program QAPP lists a laboratory duplicate as a QC sample for the PFAS analysis with no associated QC limit. A laboratory duplicate analysis was not reported by the laboratory for the PFAS analysis. The EPA Data Review and Validation Guidelines for PFAS Analyzed using EPA Method 537 (2018) does not include discussion of laboratory duplicate analyses. No actions are taken.

10. Serial Dilution (metals only)

MCP-14 Metals/Mercury: A serial dilution analysis was not performed for this SDG. The Massachusetts CAM requires a serial dilution analysis on samples used for MS/MSD analyses where analytes are detected at > 50x RL. MS/MSD analyses were performed on samples 2023-SB-12-1012 (620-10117-18), 2023-SB05-0406 (620-10117-43), 2023-SB-12-0810 (620-10117-17), and 2023-SB-05-0002 (620-10117-41). Detected analyte results were < 50x RL for all MS/MSD samples except for barium in sample 2023-SB-05-0002, which was detected at 57.0 mg/kg with an RL of 0.516 mg/kg. Based on the NFGs, detected results are qualified as estimated (J) if a serial dilution analysis is not performed. Professional judgement was used to accept the detected barium result in sample 2023-SB-05-0002 unqualified since the MS/MSD recoveries and RPD results as well as the laboratory duplicate results for barium in this sample were acceptable. Actions are limited to the parent sample only since three other SB MS/MSD and laboratory duplicate results were acceptable. There are no serial dilution criteria included in the Program QAPP.

11. Field Duplicate Precision

Field duplicate pairs 2023-SB-07-0406 (620-10117-21) / 2023-FD-06 (620-10117-31) and 2023-SB-06-0406 (620-10117-35) / 2023-FD-07 (620-10117-32) are associated with the soil samples of this SDG. Acceptable field duplicate precision is an RPD of ≤ 50% for results > 5x RL and an absolute difference < 4x RL for results < 5x RL, based on the EPA Region 1 Supplement (2020).

Based on the Region 1 Supplement (2020), qualifications are applied to all field samples with similar matrix unless otherwise indicated.

Field duplicate precision criteria were met for the VOC, SVOC, MassDEP VPH, MCP-14 Metals/Mercury, and PFAS analyses for both field duplicate pairs. Field duplicate precision criteria were exceeded for Aroclor 1254 in the analysis of field duplicate pair 2023-SB-06-0406 / 2023-FD-07 (RPD 64%), for results > 5x RL. The detected results for Aroclor 1254 are qualified as estimated in the field duplicate pair. Actions are limited to the field duplicate pair only since field duplicate precision criteria were met for field duplicate pair 2023-SB-07-0406 / 2023-FD-06.

12. Internal Standards

Not assessed for S2AVM data review.

13. Dual Column Precision (PCBs only)

Laboratory data for PCB identification and quantitation is not a required deliverable for the MCP CAM method for PCB analysis by GC. Therefore, dual column precision criteria could not be confirmed. However, the MCP CAM method does require a case narrative notation if the RPD for dual column results is > 40%. The laboratory case narrative did not include a notation for RPDs > 40% for PCB detections. No action is taken.

14. Performance Evaluation Samples

Performance Evaluation (PE) samples were not included in this SDG.

15. Reporting Limits

RLs for non-detect results for VOCs, SVOCs, and MassDEP-VPH analyses met the Project Action Levels (PALs) for the site.

RLs for non-detect PCB Aroclor results meet the PAL of 1 mg/kg for each Aroclor except for the RLs for non-detect Aroclor results in samples 2023-MW-05-0002 (620-10117-25), 2023-SB-06-0002 (620-101171-33), and 2023-SB-06-0204 (620-101171-34), where RLs ranged from 1.14 to 1.17 mg/kg for non-detect Aroclor results. The exceeded PALs were due to sample dilutions required to report the results for these samples. All 3 samples required a dilution factor of 50x. Site objectives may be impacted.

RLs for non-detect MCP-14 metals/mercury results met the PALs for the site except for the thallium RLs in samples 2023-SB-12-0810 (620-10117-17) and 2023-MW-06-0810 (620-10117-5), where the PAL of 8 mg/kg was exceeded (38.9 mg/kg and 27.1 mg/kg, respectively). Non-detect thallium results for these samples were reported with a dilution factor of 10x. Site objectives may be impacted.

Note there are no PALs associated with the PFAS analysis.

16. Other

Region 1 Supplement (2020) criterion for percent solids content (> 30%) was met for all soil samples. No action required.

Overall bias is considered indeterminate when cumulative nonconformances do not show a consistent bias or in cases of the presence of conflicting high and low biases.

Field Duplicate Evaluation

SDG: 620101171 VOCs

Analyte	Original Result mg/kg	Qual	Duplicate Result mg/kg	Qual	RPD ≤ 50%	Abs Diff	Comment

Note: Since laboratory accreditations are subject to change, Eurofins Environment Testing Northeast, LLC places the ownership of method, analyte & accreditation compliance upon our subcontract laboratories. This sample shipment is forwarded under chain-of-custody. If the laboratory does not currently maintain accreditation in the State of Origin listed above for analysis/tests/matrix being analyzed, the samples must be shipped back to the Eurofins Environment Testing Northeast, LLC laboratory or other instructions will be provided. Any changes to accreditation status should be brought to Eurofins Environment Testing Northeast, LLC attention immediately. If all requested accreditations are current to date, return the signed Chain of Custody attesting to said compliance to Eurofins Environment Testing Northeast, LLC.

Possible Hazard Identification	*Sample Disposal (A fee may be assessed if samples are retained longer than 1 month)*
Unconfirmed	☐ *Return To Client* ☐ *Disposal By Lab* ☐ *Archive For* _____ *Months*

Qualifiers

GC/MS VOA

Qualifier	Qualifier Description
*-	LCS and/or LCSD is outside acceptance limits, low biased.
*+	LCS and/or LCSD is outside acceptance limits, high biased.
*3	ISTD response or retention time outside acceptable limits.
B	Compound was found in the blank and sample.
F1	MS and/or MSD recovery exceeds control limits.
F2	MS/MSD RPD exceeds control limits
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
S1-	Surrogate recovery exceeds control limits, low biased.
S1+	Surrogate recovery exceeds control limits, high biased.

GC/MS Semi VOA

Qualifier	Qualifier Description
*-	LCS and/or LCSD is outside acceptance limits, low biased.
*1	LCS/LCSD RPD exceeds control limits.
*3	ISTD response or retention time outside acceptable limits.
B	Compound was found in the blank and sample.
F1	MS and/or MSD recovery exceeds control limits.
F2	MS/MSD RPD exceeds control limits
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
S1+	Surrogate recovery exceeds control limits, high biased.

GC VOA

Qualifier	Qualifier Description
B	Compound was found in the blank and sample.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

GC Semi VOA

Qualifier	Qualifier Description
F2	MS/MSD RPD exceeds control limits
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
S1-	Surrogate recovery exceeds control limits, low biased.

LCMS

Qualifier	Qualifier Description
*5-	Isotope dilution analyte is outside acceptance limits, low biased.
*5+	Isotope dilution analyte is outside acceptance limits, high biased.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

Metals

Qualifier	Qualifier Description
^3+	Reporting Limit Check Standard is outside acceptance limits, high biased
^5-	Linear Range Check (LRC) is outside acceptance limits, low biased.
4	MS, MSD: The analyte present in the original sample is greater than 4 times the matrix spike concentration; therefore, control limits are not applicable.
F1	MS and/or MSD recovery exceeds control limits.
F2	MS/MSD RPD exceeds control limits
F3	Duplicate RPD exceeds the control limit
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

General Chemistry

Qualifier	Qualifier Description
F3	Duplicate RPD exceeds the control limit

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery

Glossary (Continued)

Abbreviation	These commonly used abbreviations may or may not be present in this report.
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

MassDEP Analytical Protocol Certfication Form

Laboratory Name: Eurofins New England | Project #: 620-10117-1

Project Location: American Tissue Mill - Templeton, MA | RTN:

This Form provides certifications for the following data set: list Laboratory Sample ID Number(s):
620-10117-1 through 620-10117-46

Matrices: ☐ Groundwater/Surface Water ☑ Soil/Sediment ☐ Drinking Water ☐ Air ☐ Other:

CAM Protocol (check all that apply below:)

8260 VOC CAM II A ☑	7470/7471 Hg CAM III B ☑	MassDEP VPH (GC/PID/FID) CAM IV A ☑	8082 PCB CAM V A ☑	9014 Total Cyanide/PAC CAM VI A ☐	6860 Perchlorate CAM VIII B ☐
8270 SVOC CAM II B ☑	7010 Metals CAM III C ☐	MassDEP VPH (GC/MS) CAM IV C ☐	8081 Pesticides CAM V B ☐	7196 Hex Cr CAM VI B ☐	MassDEP APH CAM IX A ☐
6010 Metals CAM III A ☑	6020 Metals CAM III D ☐	MassDEP EPH CAM IV B ☐	8151 Herbicides CAM V C ☐	8330 Explosives CAM VIII A ☐	TO-15 VOC CAM IX B ☐

Affirmative Responses to Questions A through F are required for "Presumptive Certainty" status

A	Were all samples received in a condition consistent with those described on the Chain-of-Custody, properly preserved (including temperature) in the field or laboratory, and prepared/analyzed within method holding times?	☑ Yes ☐ No
B	Were the analytical method(s) and all associated QC requirements specified in the selected CAM protocol(s) followed?	☑ Yes ☐ No
C	Were all required corrective actions and analytical response actions specified in the selected CAM protocol(s) implemented for all identified performance standard non-conformances?	☑ Yes ☐ No
D	Does the laboratory report comply with all the reporting requirements specified in CAM VII A, "Quality Assurance and Quality Control Guidelines for the Acquisition and Reporting of Analytical Data"?	☑ Yes ☐ No
E	VPH, EPH, APH, and TO-15 only a. VPH, EPH, and APH Methods only: Was each method conducted without significant modification(s)? (Refer to the individual method(s) for a list of significant modifications). b. APH and TO-15 Methods only: Was the complete analyte list reported for each method?	☑ Yes ☐ No ☐ Yes ☐ No
F	Were all applicable CAM protocol QC and performance standard non-conformances identified and evaluated in a laboratory narrative (including all "No" responses to Questions A through E)?	☑ Yes ☐ No

Responses to Questions G, H and I below are required for "Presumptive Certainty" status

G	Were the reporting limits at or below all CAM reporting limits specified in the selected CAM protocol(s)?	☐ Yes ☑ No[1]

Data User Note: Data that achieve "Presumptive Certainty" status may not necessarily meet the data usability and representativeness requirements described in 310 CMR 40. 1056 (2)(k) and WSC-07-350.

H	Were **all** QC performance standards specified in the CAM protocol(s) achieved?	☐ Yes ☑ No[1]
I	Were results reported for the complete analyte list specified in the selected CAM protocol(s)?	☑ Yes ☐ No[1]

1 All negative responses must be addressed in an attached laboratory narrative.

I, the undersigned, attest under the pains and penalties of perjury that, based upon my personal inquiry of those responsible for obtaining the information, the material contained in this analytical report is, to the best of my knowledge and belief, is accurate and complete.

Job ID: 620-10117-1

Laboratory: Eurofins New England

Narrative

Job Narrative
620-10117-1

Receipt
The samples were received on 3/3/2023 4:09 PM. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice. The temperature of the cooler at receipt was 2.6º C.

GC/MS VOA
Method 8260C: The matrix spike duplicate (MSD) recoveries and precision for preparation batch 620-20198 and 620-20327 and analytical batch 620-20328 were outside control limits. Sample matrix interference and/or non-homogeneity are suspected because the associated laboratory control sample / laboratory sample control duplicate (LCS/LCSD) precision was within acceptance limits.

Method 8260C: The matrix spike (MS) recoveries for preparation batch 620-20198 and 620-20295 and analytical batch 620-20296 were outside control limits for one or more analytes, see QC Sample Results for detail. Sample matrix interference and/or non-homogeneity are suspected because the associated laboratory control sample (LCS) recovery is within acceptance limits.

Method 8260C: The large number of analytes included in the continuing calibration verification (CCV) gives a high probability that one or more analytes will be outside acceptance criteria. As indicated in the reference method, analysis may proceed as long as no more than 20% of the analytes of interest are outside the method-defined %D criteria. Affected analytes: tert-Butanol. (CCVIS 620-20361/3)

Method 8260C: The continuing calibration verification (CCV) associated with batch 620-20396 exhibited % difference of > 20% for the following analytes: Tert-butyl ethyl ether, Isopropyl ether, 2-Methyl-2-propanol, Naphthalene, Tetrahydrofuran, Hexachlorobutadiene, 1,2,3-Trichlorobenzene, Tert-amyl methyl ether, 1,2,4-Trichlorobenzene, o-Xylene, cis-1,3-Dichloropropene, Methyl tert-butyl ether, 1,1-Dichloropropene, 4-Isopropyltoluene, and 1,2-Dibromo-3-Chloropropane; however, the results of the LCS were within the CCV acceptance limits. The EPA method requires that all target analytes in the continuing calibration verification standard be within 20% difference from the initial calibration. According to the laboratory standard operating procedure, the LCS is acceptable if it meets the CCV acceptance criteria.

Method 8260C: The laboratory control sample and the laboratory control sample duplicate (LCS/LCSD) for preparation batch 620-20408 and analytical batch 620-20396 recovered outside control limits for the following analyte: Dichlorodifluoromethane, which has been identified as a poor performing analyte when analyzed using this method. According to MCP requirements, poor performers are allowed to recover within 40-160%; therefore, re-extraction/re-analysis was not performed. These results have been reported and qualified.

Method 8260C: The laboratory control sample and the laboratory control sample duplicate (LCS/LCSD) for preparation batch 620-20432 and analytical batch 620-20433 recovered outside control limits for the following analyte: Bromomethane, which has been identified as a poor performing analyte when analyzed using this method. According to MCP requirements, poor performers are allowed to recover within 40-160%; therefore, re-extraction/re-analysis was not performed. These results have been reported and qualified.

Method 8260C: The continuing calibration verification (CCV) associated with batch 620-20433 exhibited % difference of > 20% for the following analytes: tert-Butanol, Tert-butyl ethyl ether, and Naphthalene; however, the results of the LCS were within the CCV acceptance limits. The EPA method requires that all target analytes in the continuing calibration verification standard be within 20% difference from the initial calibration. According to the laboratory standard operating procedure, the LCS is acceptable if it meets the CCV acceptance criteria.

Method 8260C: Internal standard (ISTD) response for the following samples were outside control limits: 2023-SB-08-0810' (620-10117-11), 2023-SB-08-1012' (620-10117-12), 2023-SB-07-0406' (620-10117-21) and 2023-MW-05-0406' (620-10117-30). The samples were re-extracted and/or re-analyzed and ISTD response was outside control limits.

Method 8260C: Internal standard responses were outside of acceptance limits for the following samples: 2023-SB-08-0810' (620-10117-11), 2023-SB-08-1012' (620-10117-12) and 2023-SB-07-0406' (620-10117-21). The samples show evidence of matrix interference.

Method 8260C: Internal standard responses were outside of acceptance limits for the following sample: 2023-MW-05-0406' (620-10117-30). The sample shows evidence of matrix interference.

Method 8260C: Surrogate recovery for the following sample was outside the upper control limit: 2023-SB-08-1012' (620-10117-12). This

Job ID: 620-10117-1 (Continued)

Laboratory: Eurofins New England (Continued)

sample did not contain any target analytes; therefore, re-extraction and/or re-analysis was not performed.

Method 8260C: Surrogate recovery for the following samples were outside the upper control limit: 2023-SB-08-1012' (620-10117-12) and 2023-SB-07-0406' (620-10117-21). This sample did not contain any target analytes; therefore, re-extraction and/or re-analysis was not performed.

Method 8260C: The large number of analytes included in the continuing calibration verification (CCV) gives a high probability that one or more analytes will be outside acceptance criteria. As indicated in the reference method, analysis may proceed as long as no more than 20% of the analytes of interest are outside the method-defined %D criteria. Affected analyte: 1,1,2-Trichloroethane.
(CCVIS 620-20473/3)

Method 8260C: The laboratory control sample duplicate (LCSD) for preparation batch 620-20472 and analytical batch 620-20473 recovered outside control limits for the following analytes: Chloroethane and Bromomethane, which has been identified as poor performing analytes when analyzed using this method. According to MCP requirements, poor performers are allowed to recover within 40-160%; therefore, re-extraction/re-analysis was not performed. These results have been reported and qualified.

Method 8260C: Internal standard (ISTD) response for the following sample was outside control limits: 2023-SB-05-0002' (620-10117-41). The sample was re-extracted and/or re-analyzed and ISTD response was outside control limits.

Method 8260C: The matrix spike / matrix spike duplicate (MS/MSD) recoveries for preparation batch 620-20275 and 620-20472 and analytical batch 620-20473 were outside control limits for one or more analytes, see QC Sample Results for detail. Sample matrix interference and/or non-homogeneity are suspected because the associated laboratory control sample (LCS) recovery is within acceptance limits.

Method 8260C: Internal standard responses were outside of acceptance limits for the following sample: 2023-SB-05-0002' (620-10117-41). The sample shows evidence of matrix interference.

Method 8260C: The laboratory control sample (LCS) and the laboratory control sample duplicate (LCSD) for batch 620-20518 recovered outside control limits but were greater than 10% for the following analytes: 1,1,2,2-Tetrachloroethane, 1,2-Dibromo-3-Chloropropane, and Dichlorodifluoromethane . MCP protocol allows for 10% of the target compounds to be outside of the limits provided the recoveries are over 10%. The associated samples are: (LCS 620-20516/1-A) and (LCSD 620-20516/2-A).

Method 8260C: The large number of analytes included in the continuing calibration verification (CCV) gives a high probability that one or more analytes will be outside acceptance criteria. As indicated in the reference method, analysis may proceed as long as no more than 20% of the analytes of interest are outside the method-defined %D criteria. Affected analytes: Tert-butyl ethyl ether, Isopropyl ether, Methyl tert-butyl ether, 2-Methyl-2-propanol, 1,1,2,2-Tetrachloroethane, 1,3-Dichlorobenzene, and 1,4-Dichlorobenzene.
(CCVIS 620-20518/3)

Method 8260C: Internal standard (ISTD) response for the following sample was outside control limits: 2023-SB-12-1012' (620-10117-18). The samples were re-extracted and/or re-analyzed and ISTD response was outside control limits.

Method 8260C: Internal standard responses were outside of acceptance limits for the following samples: 2023-SB-12-1012' (620-10117-18), 2023-SB-12-1012' (620-10117-18[MS]) and 2023-SB-12-1012' (620-10117-18[MSD]). The samples show evidence of matrix interference.

Method 8260C: The matrix spike / matrix spike duplicate (MS/MSD) recoveries and precision for preparation batch 620-20275 and 620-20472 and analytical batch 620-20473 were outside control limits. Sample matrix interference and/or non-homogeneity are suspected because the associated laboratory control sample / laboratory sample control duplicate (LCS/LCSD) precision was within acceptance limits.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

GC/MS Semi VOA

Method 8270D: The large number of analytes included in the continuing calibration verification (CCV) (CCVIS 620-20503/3) gives a high probability that one or more analytes will be outside acceptance criteria. As indicated in the MCP method, analysis may proceed as long

Job ID: 620-10117-1 (Continued)

Laboratory: Eurofins New England (Continued)

as no more than 20% of the analytes of interest are outside the method-defined %D criteria. 1,2,4,5-Tetrachlorobenzene, 4,6-Dinitro-2-methylphenol, Benzidine, Benzoic acid and Pentachloronitrobenzene.

Method 8270D: Six surrogates are used for this analysis. The laboratory's SOP allows one acid and one base of these surrogates to be outside acceptance criteria without performing re-extraction/re-analysis. The following sample contained an allowable number of surrogate compounds outside limits: 2023-MW-06-0810' (620-10117-5). These results have been reported and qualified.

Method 8270D: The matrix spike / matrix spike duplicate (MS/MSD) recoveries for preparation batch 620-20475 and analytical batch 620-20495 were outside control limits, bias low for: Benzidine & Hexachlorocyclopentadiene. Sample matrix interference is suspected because the associated laboratory control sample (LCS) recovery was within acceptance limits.

Method 8270D: The laboratory control sample duplicate(LCSD) for preparation batch 620-20475 and analytical batch 620-20495 recovered outside control limits for the following analyte: Benzoic acid. Benzoic acid has been identified as a poor performing analyte when analyzed using this method; therefore, re-extraction/re-analysis was not performed. The analyte recovered within acceptance limits in the LCS. These results have been reported and qualified.

Method 8270D: The matrix spike / matrix spike duplicate (MS/MSD) recoveries and precision for preparation batch 620-20546 and analytical batch 620-20556 were outside control limits. Sample matrix interference and/or non-homogeneity are suspected because the associated laboratory control sample / laboratory sample control duplicate (LCS/LCSD) precision was within acceptance limits.

Method 8270D: The large number of analytes included in the continuing calibration verification (CCV) (CCVIS 620-20556/7) gives a high probability that one or more analytes will be outside acceptance criteria. As indicated in the MCP method, analysis may proceed as long as no more than 20% of the analytes of interest are outside the method-defined %D criteria. 4,6-Dinitro-2-methylphenol, Benzoic acid and Di-n-butyl phthalate.

Method 8270D: The continuing calibration verification (CCV) analyzed in batch 620-20556 was outside the method criteria for the following analyte: Benzoic Acid. This analyte recovered below acceptance criteria due to breakdown in the standard, however it recovered within range in the LCS and LCSD; therefore, demonstrating the analytical system had sufficient sensitivity to detect the compounds had they been present. Since the affected target compounds were not detected in the samples, the data have been reported and qualified.

Method 8270D: The matrix spike / matrix spike duplicate (MS/MSD) recoveries for the problematic compound Benzidine in preparation batch 620-20520 and analytical batch 620-20556 were outside control limits. Sample matrix interference and/or non-homogeneity are suspected because the associated laboratory control sample / laboratory sample control duplicate (LCS/LCSD) precision was within acceptance limits.

Method 8270D: The continuing calibration verification (CCV) associated with batch 620-20590 recovered above the upper control limit for Di-n-octyl phthalate. The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported. The associated sample is impacted: (CCVIS 620-20590/3).

Method 8270D: The continuing calibration verification (CCV) associated with batch 620-20626 recovered above the upper control limit for Aniline. The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported. The associated sample is impacted: (CCVIS 620-20626/5).

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

GC VOA

Method MAVPH: The method blank for preparation batch 480-660655 and analytical batch 480-660658 contained Naphthalene above the method detection limit. This target analyte concentration was less than the reporting limit (RL); therefore, re-extraction and/or re-analysis of samples was not performed.

Method MAVPH: The method blank for preparation batch 480-660799 and analytical batch 480-660808 contained Naphthalene above the method detection limit. This target analyte concentration was less than the reporting limit (RL); therefore, re-extraction and/or re-analysis of samples was not performed.

Method MAVPH: The method blank for preparation batch 480-660942 and analytical batch 480-660951 contained Naphthalene above the

Job ID: 620-10117-1 (Continued)

Laboratory: Eurofins New England (Continued)

method detection limit. This target analyte concentration was less than the reporting limit (RL); therefore, re-extraction and/or re-analysis of samples was not performed.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

GC Semi VOA
Methods 8082, 8082A: The DCB Decachlorobiphenyl (Surr) surrogate recovery for the following CCVs were outside acceptance limits (high biased) on the primary column: (CCV 620-20438/60). The recovery is within acceptance limits on the other column, indicating that the extraction process was in control. Surrogates were reported off the confirmation column.

Method 8082: The matrix spike duplicate (MSD) precision for preparation batch 620-20414 and analytical batch 620-20434 were outside control limits. Sample matrix interference and/or non-homogeneity are suspected because the associated laboratory control sample / laboratory sample control duplicate (LCS/LCSD) precision was within acceptance limits.

Method 8082: The following samples required a dilution due to the nature of the sample matrix: 2023-SB-07-0406' (620-10117-21), 2023-FD-06 (620-10117-31), 2023-SB-06-0002' (620-10117-33) and 2023-SB-06-0204' (620-10117-34). Because of this dilution, the surrogate spike concentration in the sample was reduced to a level where the recovery calculation does not provide useful information.

Method 8082: The following sample required a dilution due to the nature of the sample matrix: 2023-SB-12-0002' (620-10117-13). Because of this dilution, the surrogate spike concentration in the sample was reduced to a level where the recovery calculation does not provide useful information.

Method 8082: The following sample required a dilution due to the nature of the sample matrix: 2023-MW-05-0002' (620-10117-25). Because of this dilution, the surrogate spike concentration in the sample was reduced to a level where the recovery calculation does not provide useful information.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Metals
Method 6010: The following samples were diluted due to the nature of the sample matrix: 2023-SB-08-0204' (620-10117-8) and 2023-SB-06-1012' (620-10117-38). Elevated reporting limits (RLs) are provided.

Method 6010: The following samples were diluted due to the nature of the sample matrix: 2023-MW-06-0002' (620-10117-1), 2023-MW-06-0204' (620-10117-2), 2023-MW-06-0406' (620-10117-3), 2023-MW-06-0608' (620-10117-4), 2023-MW-06-0810' (620-10117-5), 2023-SB-08-0002' (620-10117-7), 2023-SB-08-0608' (620-10117-10), 2023-SB-08-0810' (620-10117-11), 2023-SB-12-0002' (620-10117-13), 2023-SB-12-0204' (620-10117-14), 2023-SB-12-0810' (620-10117-17), 2023-SB-12-1012' (620-10117-18), 2023-SB-07-0002' (620-10117-19), 2023-SB-07-0204' (620-10117-20), 2023-SB-07-0608' (620-10117-22), 2023-SB-07-0810' (620-10117-23), 2023-MW-05-0002' (620-10117-25), 2023-MW-05-0204' (620-10117-26), 2023-MW-05-0608' (620-10117-27), 2023-MW-05-0810' (620-10117-28), 2023-MW-05-0406' (620-10117-30), 2023-FD-06 (620-10117-31), 2023-FD-07 (620-10117-32), 2023-SB-06-0204' (620-10117-34), 2023-SB-06-0406' (620-10117-35), 2023-SB-06-0608' (620-10117-36), 2023-SB-06-0810' (620-10117-37), 2023-SB-05-0406' (620-10117-43), 2023-SB-05-0608' (620-10117-44), 2023-SB-05-0810' (620-10117-45) and 2023-SB-05-1012' (620-10117-46). Elevated reporting limits (RLs) are provided.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

LCMS
Method 537 (modified): The recovery for the labeled isotope: M2-8:2 FTS in the following sample: 2023-SB-05-0002' (620-10117-41) is outside the QC acceptance limits. Since the recovery is high and the native analyte is not detected in the sample, the data is reported.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

General Chemistry
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Organic Prep
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Percent Solids: 84.0

General Chemistry

Analyte	Result	Qualifier	RL	MDL	Unit	D	Prepared	Analyzed	Dil Fac
Percent Moisture (EPA Moisture)	16.0		0.1	0.1	%			03/06/23 11:08	1
Percent Solids (EPA Moisture)	84.0		0.1	0.1	%			03/06/23 11:08	1

Client: Nobis Engineering, Inc.
Project/Site: American Tissue Mill - Templeton, MA

Job ID: 620-10117-1

Client Sample ID: 2023-MW-05-0002'
Date Collected: 03/03/23 10:40
Date Received: 03/03/23 16:09

Lab Sample ID: 620-10117-25
Matrix: Solid
Percent Solids: 85.4

Method: MA DEP 8260C - Volatile Organic Compounds (GC/MS)
