

## **Portable High-Throughput Integrated Laboratory Identification System (PHILIS)**

### **PHILIS Analysis Methods and Vehicle Mobilization Readiness Assessment**

**08/15/2024**

**CSS**

CSS completed the monthly assessment of PHILIS program capability to mobilize laboratory units and operate analytical instrumentation for providing analytical support to EPA emergency response operations. The current status, effective as of the date of this report, is organized by location and vehicle. Reported readiness times are estimated, based on current information and conditions, and will be reevaluated and adjusted by prioritization, to meet emergency response program needs. Laboratory analysis capability is established using GC/MS and LC/MS/MS instrumentation and methodology for analysis of CWAs, volatile, semivolatile and nonvolatile organic contaminants in water, soil and sediment, and air (sorbent tubes).

PHILIS chemists complete the following procedures to ensure operational readiness of the laboratory instrumentation:

1. Instrument readiness is measured routinely with the evaluation of the tuning compound and a continuing calibration verification standard (CCV) on each GC/MS instrument. This evaluation is conducted for the current method being evaluated on that piece of equipment. If the CCV doesn't pass, a new standard is prepared, troubleshooting is performed and if necessary injection port maintenance is performed, if the CCV still doesn't pass, then an initial calibration is performed. In completing this evaluation, the precise capability of each instrument is known. The routine analyses include tuning (if necessary), CCV or initial calibration, method blank, laboratory control spike (LCS) and LCS duplicate (LCSD). Additionally, monthly QC samples are analyzed for volatile and semivolatile analytes.
2. On the LC/MS/MS, instrument readiness is evaluated weekly by analyzing an instrument performance check (IPC) standard, which serves as a calibration verification standard. The choice of compounds in the IPC and the LC/MS/MS conditions are based on the most recent analytical method used. If the IPC does not pass acceptance criteria, and if maintenance does not resolve the exception, then the instrument shall be re-calibrated. In completing this evaluation, the precise capability of the instrument is documented. Routine analyses include IPC or initial calibration, method blank, laboratory control spike (LCS) and LCS duplicate (LCSD).
3. Each month, data is uploaded from the QC samples (LCS and LCSD) into the LIMS. This allows the laboratories to generate current precision and accuracy data, as the LIMS performs the calculations and maintains the data files. P&A data is regenerated every six months.
4. Semivolatile analytical methods require the use of at least one extraction method procedure per sample matrix to ensure that all equipment remains in a state of readiness.
5. Completion of these procedures also keeps the analysts familiar with all methods and promotes cross training, so that any analyst is able to perform all of the tests and have demonstration of capability data current.
6. PHILIS facility management ensures that the vehicles are serviced according to the established maintenance schedule, and maintained with all necessary equipment and supplies to ensure that laboratory units are ready for deployment within 2 hours, with an ability to provide service for a minimum of 4 days, as required by PHILIS contract agreement.

This report summarizes the current operational status of PHILIS assets for each location, organized according to analytical method capability, instrument & systems, vehicles, and LIMS & communications systems.

**INSTRUMENT & SYSTEM STATUS  
CASTLE ROCK OPERATIONS**

<b>Instrument/Equipment System</b>	<b>Analysis</b>	<b>Status</b>
OI Purge & Trap GC/MS/Quad/System #10	VOA	Instrument ready for analyses. 8260
GC/MS-Quad System #7	SVOA	Instrument ready for analyses. 8270
GC/MS-Quad System #9	SVOA	Instrument is operational – calibrated for Opioids. Wipe MDL analyzed. Calibrated for CWA VX.
GC/MS/Quad/FPD System #5	SVOA	Instrument was removed from the PAL to make space for new LC instrument.
OI Purge & Trap GC/MS-Quad System #8	VOA	Calibrated for 524.2 and 8260.
LC/MS/MS 1	Opioids/CWA	System is operational.
LC/MS/MS 2	Opioids/CWA	System is operational.
GC/MS BT-TOF #6	SVOA	Instrument operational.
GC/MS BT-TOF #7	CWAs	New detector on order.
GC/MS BT-TOF #5	CWAs	New detector on order.
Speed Extractors	Soil/solid extractions	Pressurized solvent extractors are set up for SVOA, fentanyl and opioid extractions. One PSE unit has been removed from hood to make space for microwave extractor. Microwave unit has been installed.
TurboVap concentrators	Extract processing	Functional and in use.
Microwave Extractor	Soils/solid extractions	MDL's complete for SVOCs.

**INSTRUMENT & SYSTEM STATUS  
EDISON OPERATIONS**

<b>Instrument/Equipment System</b>	<b>Analysis</b>	<b>Status</b>
GC/MS APL01A	VOA	New hardware added to source. TO-17 P&A completed, new initial MDL study completed. Will resume TO-15 method development after the WP/WS PT samples analysis.
GC/MS APL01B	VOA	New hardware added to source. New P&A & initial MDL study completed for 8260 aqueous samples.
GC/MS APL01C	VOA	The instrument is calibrated for method 8260D low level soil samples and 524.2 aqueous samples for low level but can be calibrated for 8260D aqueous samples.
GC/MS APL01D	VOA	As per PM instructions, unit will be removed from APL01. Relocation may be possible to the SLA.
GC/MS APL01E	VOA	Instrument is not currently in use pending placement in a different lab unit.
GC/MS APL01F	VOA	Currently calibrated for aqueous analysis by 524.2.
LC/MS/MS	SVOA	The instrument is currently in storage in building 238. Supporting lab has been emptied as per EPA instructions.
GC/MS APL02D	SVOA	The instrument is set up in APL02 and is functional and in use for LVI for CWA analysis. New Gerstel rail with TDU and cryofocusing units have been installed.
GC/MS APL02H	SVOA	Instrument is calibrated for method 8270E currently.
GC/MS APL02I	SVOA	GC/MS instrument is installed in APL02 and is set up for CWA/SIM by LVI. The instrument will be calibrated for CWA by simulants.
LECO Pegasus BT, TOF1	SVOA	Not in service.
GC/MS APL02A	SVOA	Instrument is calibrated for DRO by 8015D.
Hydrogen Generator	Parker Balston	EPA 8015D GRO/DRO.
GC/MS APL02C	VOA	Instrument is calibrated for GRO by 8015D.
GC/ECD SPA01A	SVOA	Instrument is calibrated for method 8082A.
GC/ECD SPA01B	SVOA	Instrument is calibrated for pesticides and toxaphene by method 8081B.
Fast PSE Units	Soil/solid extractions	Buchi pressurized solvent extractor units were moved to the hood and counter in the SLA. One unit set up in hood and is operational.
DryVap Units	Extract processing	One Turbovap unit set up in SLA and another unit is set up in SPA01.
Drying oven, Precision	General	Functioning
Vortex Mixer	General	Functioning
Ultrasonic Bath #1	General	Functioning
Ultrasonic Bath #2	General	Functioning
Moisture Analyzer	General	Functioning
Top loading Balance #1	General	Functioning
Top loading Balance #2	General	Functioning
GC/MS APL02B	SVOA	Not in service. MSD is currently in storage.
Top loading Balance #3	General	Functioning.
Water Treatment System	General	Out of service, EPA Milli-Q water is used. Transferred to recycler for excess.
Analytical balance	General	Out of service.
CEM Microwave Extractor	SVOA	Installed in SPA01, performance testing for 8270E is completed.

**VEHICLE STATUS  
CASTLE ROCK OPERATIONS**

<b>Vehicle Name</b>	<b>Status</b>	<b>Comments</b>
Sample Preparation Area (SPA)	Ready for deployment	The unit is ready for deployment.
PHILIS Analytical Lab (PAL)	Ready for deployment	The unit is ready for deployment.
Prevost Laboratory Unit (LU)	Ready for deployment	The unit is ready for deployment.
Ford F550 Tow Vehicle	Ready for deployment	The unit is ready for deployment.

**VEHICLE STATUS  
EDISON OPERATIONS**

<b>Vehicle Name</b>	<b>Status</b>	<b>Comments</b>
Analytical Portable Laboratory 01 (APL01)	Ready for deployment	All scheduled maintenance is completed. DOT inspection is current. Unit is ready for deployment.
Analytical Portable Laboratory 02 (APL02)	Ready for deployment	All scheduled maintenance is completed. DOT inspection is current. The Generator run hour meter is currently not functioning properly. "Unit not accurately tracking the generator's usage." Contacted KraftPower for repairing. Unit ready for deployment.
Sample Log-in Area (SLA)	Ready for deployment	All scheduled maintenance is completed. DOT inspection is current. The unit is ready for deployment.
SPA01	Ready for deployment	All scheduled maintenance is completed. DOT inspection is current. Unit is ready for deployment.
Ford F550 #1	Ready for deployment	All scheduled maintenance is completed. DOT inspection is current. Unit is ready for deployment.
Ford F550 Box/Cold Storage truck, Sample Storage Area (SSA)	Ready for deployment	Standby compressor failed during the month of April 2022. Refrigerator can only be operated in transit mode. DOT inspection is current. The unit is ready for deployment as a tow vehicle or cargo carrier.
Ford F550 #2/SLA Tow Vehicle	Ready for deployment	All scheduled maintenance is completed. DOT inspection is current. Unit is ready for deployment.

READINESS ASSESSMENT**

---

**LIMS/GLOBAL COMMUNICATION SYSTEM STATUS**

<b>LIMS / Communication Items</b>	<b>Status</b>	<b>Comments</b>
Global	Overview	<p>PAL LC The new Thermo Fisher LC unit is online and operational. The PC was shipped to the IT department, where a fresh, non-group-policy copy of Windows was installed. The Thermo Fisher technician successfully installed their software, resulting in a fully functional PC and instrument capable of reaching the internet for remote control by the chemists. Project complete.</p> <p>APL01-C Reliability APL01-C is operational after a service tech replaced the LED screen, allowing us to set a new IP address on the MS. The MS was wired directly into the PC using an alternate 10.x.x.x IP address, and the unit is currently online. We will monitor its connectivity over time. Given the previous intermittent communication problems, only time will tell if it is fully functional. The unit will remain in "not ready" or unsure status for now.</p> <p>NAS Full The NAS at PMO is full. We have procured 3 external drives for the 3 major NAS devices. The NAS currently has 5 2TB drives in a RAID 5 configuration. Adding additional drives and increasing the RAID size is a long-term goal. Placing an external USB 3.2 drive is a short-term fix.</p> <p>PAL Communications PAL units are occasionally falling offline. This did not happen during deployment. Post-deployment, we will switch our focus from antennas to PAL network interference at the facility.</p> <p>Antennas The new antenna project continues. We've logged 9 phone hours with multiple CISCO tech support personnel without success in getting the antennas to communicate. CISCO recommends removing the existing white antennas from the outside pole mast and utilizing the newly procured grey Cisco brand antennas. Similar to HP printers that complain about non-genuine ink and iPhones with aftermarket incompatible cables, Cisco's antennas require genuine Cisco brand antennas to avoid errors and problems. The fix involves climbing on top of the LU, the outside building at Edison with a 20-foot ladder, and all other trucks to replace the 13 year old, previously used 2.4GHz antennas with the new 5GHz antennas. This labor-intensive job requires IT to visit each site. Additionally, the outside of the building 238 pole antenna must be handled by Chenega, as it is union work.</p> <p>For now, we will use the hard-wired method at the upcoming DNC deployment, which we used successfully at the RNC deployment. After the deployment, we will schedule onsite visits to fully install the new antenna on each outside mast. There were discrepancies about performing this much work on vehicles we are about to decommission. We initially projected that the new ISO pods might arrive in November 2024. With the projection pushed out at least a year or two past that date, it is my recommendation to spend the time and money to make the existing vehicles fully wireless functional until they can be decommissioned and the new ISO containers prepped for communication equipment.</p> <p>Starlink We investigated trying out Starlink. If we go through the Starlink website and request GSA discount pricing, it directs us to this website: <a href="https://www.gsaadvantage.gov/advantage/ws/search/advantage_search?q=19:547QRAA21D007N&amp;searchType=1&amp;db=0">https://www.gsaadvantage.gov/advantage/ws/search/advantage_search?q=19:547QRAA21D007N&amp;searchType=1&amp;db=0</a>. It appears that a unit will cost around \$2500 and \$200-\$300 per unit and we will require permission from the EPA to procure a test unit if that is the direction they want to go in.</p>
