Physical Site Characterization

Background Information:

The Bradford Veneer & Panel Site (the Site) is a 1.47-acre property located in a mixed residential/rural area in Bradford, Orange County, Vermont. The Site is bounded to the east by the Waits River, to the west by Mill Street, to the South by Old Creamery Road, and to the north by a storage building and residences. The Site consists of an interconnected building composed of different sections. A portion of the building contains a second story and an attic. The building's sections are mostly wood-frame constructions of different ages. The boiler room and firewood storage room are made of brick. The most recent section is an approximately 30-year-old metal storage building on the south end of the subject property. Most of the sections have concrete slab foundations except for the northeast section, which has a dirt floor basement, and the boiler room, which has a cement floor basement. The building is in a state of disrepair. The roof is leaking, and several areas of the floor on the second floor and in the attic are rotting. There is no power to the property, but it is still connected to town water and sewer.

According to the Phase I Environmental Site Assessment (ESA) conducted by LE Environmental (LEE) LLC, the Site was developed in 1858 and functioned as wood products manufacturing facilities from 1887 to 1953. These facilities included plywood production, box shops, a sash and

REMOVAL PRELIMINARY ASSESSMENT

blind factory, sawmill, blacksmith, and a metals foundry and machine shop. The facility had hydro power from flumes, water wheels, and a dam on the Waits River.

On 3 October 1979, a Hazardous Waste Inventory was conducted and prepared by the property owner at the time. The inventory indicated that the facility manufactured hardwood plywood, and there was no documented on-site waste disposal, except a wood burner in the boiler room. There was documentation of waste wood and glue in barrels or 40,000-gallon tanks. In 1981, a Notification of Hazardous Waste Activity Form was prepared by the property owner which indicated hazardous waste generated on site including urea formaldehyde and glue in water solution which was accepted by the municipal sewer system.

In 1997, a VT Department of Environmental Conservation (DEC) Inspection Form for Hazardous Waste Generators was prepared by VT DEC Waste Management Division. The form indicated that the facility manufactured custom-sized wood panels. The sawmill/veneer lathe was noted to have been removed in the early to mid-1990s. Hazardous wastes generated included used absorbents, waste oils (disposed of off site), metal grinding swarf/sludge, and parts-washing waste from maintenance shop activities. The VT DEC classified the facility as a non-generator of hazardous waste at that time.

On 31 January 2024, the Phase 1 ESA was performed by LEE for the Two Rivers-Ottauquechee Regional Commission. The ESA included an on-site reconnaissance of accessible portions of the Site. The Phase I Site Assessment was performed for a development company/prospective buyer that was interested in developing the property in conjunction with the VT DEC Waste Management and Prevention Division (WMPD) Sites Management Section (SMS) Brownfields Program. The Phase I ESA documented over 200 containers of glues, resins, epoxy and other chemicals present inside the building. Based on labeling, the majority of the drums contained substances used in wood products production including urea formaldehyde, liquid resin, epoxy adhesive, wood sealers, and wood stain. Some of the containers appeared empty. Several pieces of wood products machinery were observed inside the building including sanders, planers, saws, and presses.

Occupancy in the building complex appears to be taking place by unhoused persons, and drug paraphernalia was present on site. An approximation of 100 55-gallon drums and over 100 5-gallon pails of process chemicals were noted to be stored inside the building. Propylene glycol antifreeze and water treatment chemicals were also present in the building. Small containers (less than 5 gallons) of air compressor oil, ethylene glycol antifreeze, roofing cement, Rustoleum paint, spray paint, contact cement, and paint thinner were present in a flammable storage cabinet near the boiler room and at other locations inside the building. A faint solvent odor was noted in the vicinity of some of the drummed chemicals. Several 5-gallon containers including compressor oil and unlabeled pails were leaking onto the cement floor.

Description of Substances Possibly Present, Known or Alleged:

On 30 July 2024, VT DEC conducted a Resource Conservation and Recovery Act (RCRA) inspection at the facility. At the Loading Dock, there were over 100 unlabeled waste containers in poor condition ranging in size from 5 to 55 gallons stacked on pallets, some marked as flammable. There were a similar number of containers of unknown contents in the main room along with waste lamps. The inspectors noted small unknown releases in the main room. Several small rooms off of the main room contained a smaller number of containers in similar condition. Most of the

REMOVAL PRELIMINARY ASSESSMENT

containers in the catwalk room appeared to be empty. Upstairs, there were several containers that were not accessible due to building structural integrity.

Physical Site Observations

Comments: The Site is bounded to the east by the Waits River, to the west by Mill Street, to the south by Old Creamery Road, and to the north by a storage building and a residence. The Site includes an interconnected building composed of different sections with two stories and an attic. The building sections are mostly wood-frame construction of various ages. The boiler room and firewood storage room are brick, and the most recent section is an approximately 30-year-old metal storage building on the south end of the subject property. Most of the sections have concrete slab foundations except for the northeast section, which has a dirt floor basement and the boiler room, which has a cement floor basement. The building is in a state of disrepair. The roof is leaking, and several areas of the floor on the second floor and in the attic are rotting. There is no power to the property, but it is still connected to town water and sewer.

During the Site reconnaissance, on 14 August 2024, it was found that the second floor of the storage and woodworking area had visible holes in the flooring and was not entered. Two releases of container contents were observed during the Site reconnaissance. In the main room, the release of a white glue-like substance from a large tote had an alkaline pH of 10. In the catwalk room, an overturned drum had spilled a white powdery substance. In a small room near the boiler, a drum next to an ash pile was observed and labeled corrosive; however, the substance within appeared to be oil and had a petroleum-like smell. This drum could not be tested for pH. Drums and small containers were noted throughout the Site. In addition, the gamma radiation, oxygen, lower explosive limit (LEL), and photoionization detector (PID) readings remained at background levels throughout the Site.

() Deviation from SOP

Comments:

Sampling was conducted according to the Site Sampling and Analysis Plan (SAP), prepared as a separate document entitled *Sampling and Analysis Plan for the Bradford Veneer & Panel Site, Bradford, Orange County, Vermont*, dated September 2024.

Description of Sampling Conducted

On 10 September 2024, START personnel collected 17 drum/product samples (including one field duplicate) from various containers inside the building. All the drum/product samples were submitted to the EPA Laboratory Services and Applied Science Divisions (LSASD) laboratory for volatile organic compounds (VOCs), semivolatile organic compounds (SVOCs), polychlorinated biphenyls (PCBs), pesticides, and metals analyses.

II. Narrative Chronology

Narrative Chronology

Introduction

The Bradford Veneer & Panel Site (the Site) is a 1.47-acre property located in a mixed residential/rural area in Bradford, Orange County, Vermont (see Appendix A - Figure 1) [1]. The Site is bounded to the east by the Waits River, to the west by Mill Street, to the South by Old Creamery Road, and to the north by a storage building and residences. The Site consists of an interconnected building composed of different sections (see Appendix B - Figure 2) [2]. A portion of the building contains a second story and an attic. The building's sections are mostly wood-frame constructions of different ages. The boiler room and firewood storage room are made of brick. The most recent section is an approximately 30-year-old metal storage building on the south end of the subject property. Most of the sections have concrete slab foundations except for the northeast section, which has a dirt floor basement, and the boiler room, which has a cement floor basement. The building is in a state of disrepair. The roof is leaking, and several areas of the floor on the second floor and in the attic are rotting. There is no power to the property, but it is still connected to town water and sewer.

According to the Phase I Environmental Site Assessment (ESA) conducted by LE Environmental (LEE) LLC, the Site was developed in 1858 and functioned as wood products manufacturing facilities from 1887 to 1953 [3]. These facilities included plywood production, box shops, a sash and blind factory, sawmill, blacksmith, and a metals foundry and machine shop. The facility had hydro power from flumes, water wheels, and a dam on the Waits River.

On 3 October 1979, a Hazardous Waste Inventory was conducted and prepared by the property owner at the time. The inventory indicated that the facility manufactured hardwood plywood, and there was no documented on-site waste disposal, except a wood burner in the boiler room. There was documentation of waste wood and glue in barrels or 40,000-gallon tanks. In 1981, a Notification of Hazardous Waste Activity Form was prepared by the property owner which indicated hazardous waste generated on site including urea formaldehyde and glue in water solution which was accepted by the municipal sewer system.

In 1997, a VT Department of Environmental Conservation (DEC) Inspection Form for Hazardous Waste Generators was prepared by VT DEC Waste Management Division. The form indicated that the facility manufactured custom-sized wood panels. The sawmill/veneer lathe was noted to have been removed in the early to mid-1990s. Hazardous wastes generated included used absorbents, waste oils (disposed of off site), metal grinding swarf/sludge, and parts-washing waste from maintenance shop activities. The VT DEC classified the facility as a non-generator of hazardous waste at that time [3].

On 31 January 2024, the Phase 1 ESA was performed by LEE for the Two Rivers-Ottauquechee Regional Commission [3]. The ESA included an on-site reconnaissance of accessible portions of the Site. The Phase I Site Assessment was performed for a development company/prospective buyer that was interested in developing the property in conjunction with the VT DEC Waste Management and Prevention Division (WMPD) Sites Management Section (SMS) Brownfields Program. The Phase I ESA documented over 200 containers of glues, resins, epoxy and other chemicals present inside the building. Based on labeling, the majority of the drums contained

substances used in wood products production including urea formaldehyde, liquid resin, epoxy adhesive, wood sealers, and wood stain. Some of the containers appeared empty. Several pieces of wood products machinery were observed inside the building including sanders, planers, saws, and presses.

Occupancy in the building complex appears to be taking place by unhoused persons, and drug paraphernalia was present on site. An approximation of 100 55-gallon drums and over 100 5-gallon pails of process chemicals were noted to be stored inside the building. Propylene glycol antifreeze and water treatment chemicals were also present in the building. Small containers (less than 5 gallons) of air compressor oil, ethylene glycol antifreeze, roofing cement, Rustoleum paint, spray paint, contact cement, and paint thinner were present in a flammable storage cabinet near the boiler room and at other locations inside the building. A faint solvent odor was noted in the vicinity of some of the drummed chemicals. Several 5-gallon containers including compressor oil and unlabeled pails were leaking onto the cement floor.

On 30 July 2024, VT DEC conducted a Resource Conservation and Recovery Act (RCRA) inspection at the facility. At the Loading Dock, there were over 100 unlabeled waste containers in poor condition ranging in size from 5 to 55 gallons stacked on pallets, some marked as flammable. There were a similar number of containers of unknown contents in the main room along with waste lamps. The inspectors noted small unknown releases in the main room. Several small rooms off of the main room contained a smaller number of containers in similar condition. Most of the containers in the catwalk room appeared to be empty. Upstairs, there were several containers that were not accessible due to building structural integrity [4].

Site/Sampling Activities

On 14 August 2024, EPA On-Scene Coordinators (OSCs) Jacques Elias and Matt Bosselait and START members Bonnie Mace and Amy Klinger conducted a site reconnaissance, accompanied by VT DEC representative Mike Nucci. START prepared the Ludlum 19A gamma radiation meter and the RAE Systems, Inc. MultiRAE multigas meter with oxygen (O_2), carbon monoxide (CO), hydrogen sulfide (H_2S), lower explosive limit (LEL), and volatile organic compound (VOC) sensors. Readings on the two instruments were as follows: Ludlum Model 19A: 10 microRoentgens per hour ($\mu R/hr$); and MultiRAE: $O_2 = 20.9\%$, CO = 0 ppm, $H_2S = 0$ ppm, LEL = 0%, and VOC = 0 ppm. No elevated readings were observed throughout the site walk and subsequent activities [5, 6].

Upon entry, it was found that the second floor of the storage and woodworking area had visible holes in the flooring and was not entered. Two releases of container contents were observed during the site reconnaissance. In the main room, the release of a white glue-like substance from a large tote had an alkaline pH of 10. In the catwalk room, an overturned drum had spilled a white powdery substance. In a small room near the boiler, a drum next to an ash pile was observed and labeled corrosive; however, the substance within appeared to be oil and had a petroleum-like smell. This drum could not be tested for pH. Drums and small containers were noted throughout the site.

On 10 September 2024, START members Klinger, Marina Kovalcin, and Bill Mahany mobilized to the Site to conduct sampling activities. Upon arrival, START personnel met with EPA OSC Elias. All personnel discussed the sampling scenario for the Site, which consisted of drum

sampling for volatile organic compounds (VOCs), semivolatile organic compounds (SVOCs), polychlorinated biphenyls (PCBs), pesticides, and metals.

START personnel conducted the tailgate safety meeting and discussed the slip, trip, and fall hazards, and drum sampling protocols. START personnel reviewed the Site Health and Safety Plan (HASP). The site HASP has been prepared as a separate document, entitled *Removal Program Site Health and Safety Plan for the Bradford Veneer & Panel Preliminary Assessment/Site Investigation, Bradford, Vermont* [7].

Following the completion of the safety briefing, START member Klinger prepared the RAE Systems, Inc. MultiRAE multigas meter. Background readings on the instrument were as follows: MultiRAE: O₂ = 20.8%, CO = 0 ppm, H₂S = 0 ppm, LEL = 0%, and VOC = 0 ppm.

START personnel prepared sampling equipment. EPA OSC Elias reviewed and signed the Sampling and Analysis Plan (SAP), which has been prepared as a separate document, entitled *Sampling and Analysis Plan for the Bradford Veneer & Panel Site, Bradford, Vermont* [8]. Sampling activities were performed in accordance with the Site SAP.

START personnel prepared sampling equipment and initiated drum sampling activities. Sixteen drums were selected for sampling. Drum samples were collected from each selected drum for VOC, SVOC, PCB, and metals analyses; one duplicate sample was also collected).

START members Klinger and Kovalcin collected drum samples in Level B personal protective equipment (PPE) using bailers and drum thieves. Headspace readings of VOCs were recorded for each drum or container [9]. Level D modified PPE was utilized for decontamination and post-sampling cleanup in the drum areas.

START personnel Kovalcin photo-documented the Site and the sampling locations (see Appendix C, Photo-documentation Log). START member Mahany completed the SCRIBE database of the samples that were used to generate the chain of custody and the labels for the sample containers. The chain-of-custody record is included as Appendix D.

All samples were delivered and submitted by hand by START member Kovalcin on 11 September 2024 to the EPA Laboratory Services and Applied Sciences Division (LSASD)/New England Regional Laboratory (NERL) for analysis.

Analytical Data Summaries

On 25 September 2024, START received the analytical results from LSASD for VOC, SVOC, and metals analyses. These data are summarized in Appendix B, Table 1, and are included in Appendix D.

On 26 September 2024, START received the PCB and pesticide analytical data results from LSASD. These data are summarized in Appendix B, Table 1, and are included in Appendix D.

Analytical results of the drum/product samples submitted to LSASD indicated that VOCs, SVOCs, and metals were detected above laboratory reporting limits (RLs) [11-12, 14]. No PCBs or pesticides were detected in any of the samples [13].

A total of 13 VOCs were detected in the drum/product samples. The highest number of VOCs were detected in samples PM-02, PM-06, and PM-08. Four VOCs were detected in sample PM-02, including 2-Propanone (Acetone), 2-Butanone (MEK), Toluene, and M/P Xylene, at a concentration of 35,000 mg/kg, 33,000 mg/kg, 28,000 mg/kg and 1,200 mg/kg, respectively. Six VOCs were detected in sample PM-06, with the highest VOC concentration of 87 mg/kg for Tetrahydrofuran. Eight VOCs were detected in sample PM-08, with the highest VOC concentration of 2,300 mg/kg for Naphthalene (see Appendix B, Table 1) [11].

Three SVOCs were detected in the drum/product samples, including Naphthalene (1,800 mg/kg in PM-08), Butylbenzylphthalate (1,600 mg/kg in PM-06), and Di-n-octyl phthalate (2,800 mg/kg in PM-02) (see Appendix B, Table 1) [12].

Four metals were detected in the drum/product samples (arsenic, barium, cadmium, and lead). The maximum concentrations of arsenic, cadmium, and lead were detected in sample PM-17, at 16 mg/kg, 5 mg/kg, and 83 mg/kg, respectively; and the maximum concentration of barium was detected in PM-02, at 370 mg/kg (see Appendix B, Table 1) [14].

SAMPLE LOCATION: SAMPLE NUMBERS: LABORATORY NUMBERS:	PM-02 R1S5VT0235-0001 AC15823	PM-03 R1S5VT0235-0002 AC15807	PM-04 R1S5VT0235-0003 AC15808	PM-05 R1S5VT0235-0004 AC15809	PM-06 R1S5VT0235-0005 AC15810	PM-07 R1S5VT0235-0006 AC15811
COMPOUND						
VOLATILE ORGANIC COMPOUNDS (VOCs)						
2-Propanone (acetone)	35,000,000	ND	27,000	ND	29,000	1,900,000
Carbon Disulfide	ND	ND	ND	ND	7,000	ND
Vinyl Acetate	ND	42,000	ND	ND	ND	ND
2-Butanone (MEK)	33,000,000	ND	ND	ND	ND	ND
Tetrahydrofuran	ND	ND	ND	ND	87,000	ND
Toluene	28,000,000	ND	ND	ND	44,000	ND
Ethylbenzene	ND	ND	ND	ND	ND	ND
M/P Xylene	1,200,000	ND	ND	ND	ND	ND
Ortho Xylene	ND	ND	ND	ND	ND	ND
N-Propylbenzene	ND	ND	ND	ND	ND	ND
1,3,5-Trimethylbenzene	ND	ND	ND	ND	ND	ND
1,2,4-Trimethylbenzene	ND	ND	ND	ND	10,000	ND
Naphthalene	ND	ND	ND	3,900	13,000	130,000
SEMOVOLATILE ORGANIC COMPOUNDS (SVOCs)						
Naphthalene	ND	ND	ND	ND	ND	ND
Butylbenzylphthalate	ND	ND	ND	ND	1,600	ND
Di-n-octyl phthalate	2,800	ND	ND	ND	ND	ND
POLYCHLORINATED BIPHENYLS (PCBs)						
Aroclor-1016	ND	ND	ND	ND	ND	ND
PESTICIDES						
alpha-BHC	ND	ND	ND	ND	ND	ND
METALS						
Arsenic	5.0	2.0	4.0	4.0	4.0	6.0
Barium	370	ND	ND	ND	ND	ND
Cadmium	ND	ND	ND	ND	4.0	ND
Lead	ND	ND	ND	ND	ND	ND

ANALYTICAL METHODS

Samples analyzed by U.S. EPA LSASD as follows:

VOCs: EPA Region I SOP LBSOP-VOAGCMS12,

VOAs in Soil High Level Method.

SVOCs: EPA Region LBSOP-BNASOIL7,

BNAAs in Product.

Pesticides and PCBs: EPA Region I SOP PESTSOIL2.SOP

Pesticides and PCBs in Product.

Metals: EPA Region I SOP-FLDNiton7/O1

Field Analysis of Metals by XRF.

NOTES:

1) µg/kg = micrograms per kilogram

2) mg/kg = milligrams per kilogram

3) ND = Not Detected.

4) Results are reported in the units noted.

5) A compound is listed in the table above only if it was detected in at least one of the samples analyzed.

Compounds that were analyzed for, but not detected, have been omitted.

Photo-documentation Log

PHOTODOCUMENTATION LOG
Bradford Veneer & Panel • Bradford, Vermont

SCENE: View of the southernmost exterior of the Bradford Veneer & Panel building. Photograph taken facing east.

DATE: 14 August 2024

PHOTOGRAPHER: A. Klinger

TIME: 1221 hours

CAMERA: Apple iPhone 13

SCENE: View of the exterior of the Bradford Veneer & Panel building and the Waits River. Photograph taken facing northwest.

DATE: 14 August 2024

PHOTOGRAPHER: A. Klinger

TIME: 1227 hours

CAMERA: Apple iPhone 13

PHOTODOCUMENTATION LOG
Bradford Veneer & Panel • Bradford, Vermont

SCENE: View of containers numbered 1 through 14 on the Vermont Department of Environmental Conservation (VTDEC) Waste Inventory. The 55-gallon drums and 5-gallon containers are staged on pallets and stacked in the loading dock area. Photograph taken facing east.

DATE: 14 August 2024

PHOTOGRAPHER: A. Klinger

TIME: 1212 hours

CAMERA: Apple iPhone 13

SCENE: View of overturned drums in the catwalk room. The drum listed as container number 80 on the VTDEC Waste Inventory contains a white powdery substance. Photograph taken facing southwest.

DATE: 14 August 2024

PHOTOGRAPHER: A. Klinger

TIME: 1141 hours

CAMERA: Apple iPhone 13

PHOTODOCUMENTATION LOG
Bradford Veneer & Panel • Bradford, Vermont

SCENE: View of containers numbered 31 through 38 on the VTDEC Waste Inventory. All the drums and containers are visibly corroding or leaking, and many are labeled as flammable. Photograph taken facing east.

DATE: 14 August 2024

PHOTOGRAPHER: A. Klinger

TIME: 1209 hours

CAMERA: Apple iPhone 13

SCENE: View of container number 84 from the VTDEC Waste Inventory in the garage. The 55-gallon drums are on pallets and stacked. Photograph taken facing southeast.

DATE: 14 August 2024

PHOTOGRAPHER: B. Mace

TIME: 1223 hours

CAMERA: Apple iPhone 13

PHOTODOCUMENTATION LOG
Bradford Veneer & Panel • Bradford, Vermont

SCENE: View of sample location PM-03/PM-103.

DATE: 11 September 2024

PHOTOGRAPHER: M. Kovalcin

TIME: 1341 hours

CAMERA: Apple iPhone 13

SCENE: View of the contents collected at sample location PM-10. Contents of the drum included crystallized solids and powder under the surface.

DATE: 11 September 2024

Chain-of-Custody Records and Analytical Data

Laboratory Report

September 24, 2024

Jacques Elias
US EPA Region 1

Project Number: 24090015

Project: Bradford Veneer - Bradford, VT

Analysis: VOAs in Soil High Level Method

EPA Chemist: Allison Connors

Date Samples Received by the Laboratory: 09/11/2024

Analytical Procedure:

All samples were received and logged in by the laboratory according to the USEPA New England Laboratory SOP for Sample Log-in.

Sample preparation and analysis was done following the EPA Region I SOP, LSBSOP-VOAGCMS12.

Samples were analyzed by GC/MS. Samples were introduced to the GC via an autosampler and purge and trap preconcentrator system. The analysis SOP is based on US EPA Method 8260D, revision 4.0, 2018 and Method 5035A, draft revision 1, 2002, from SW-846.

Data were reviewed in accordance with the internal verification procedures described in the EPA New England Quality Manual for NERL.

Results relate only to the items tested or to the samples as received by the Laboratory. This analytical report shall not be reproduced except in full, without written approval of the laboratory.

If you have any questions please call me at 617-918-8340 .

Sincerely,

DANIEL BOUDREAU

Qualifiers:

Page 2 of 55

RL = Reporting limit**ND** = Not Detected above Reporting limit**NA** = Not Applicable due to high sample dilutions or sample interferences**NC** = Not calculated since analyte concentration is ND.**J** = Estimated value**J1** = Estimated value due to MS recovery outside acceptance criteria**J2** = Estimated value due to LFB result outside acceptance criteria**J3** = Estimated value due to RPD result outside acceptance criteria**J4** = Estimated value due to LCS result outside acceptance criteria**E** = Estimated value exceeds the calibration range**L** = Estimated value is below the calibration range**B** = Analyte is associated with the lab blank or trip blank contamination. Values are qualified when the observed concentration of the contamination in the sample extract is less than 10 times the concentration in the blank.**R** = No recovery was calculated since the analyte concentration is greater than four times the spike level.**P** = The confirmation value exceeded 35% difference and is less than 100%. The lower value is reported.**C** = The identification has been confirmed by GC/MS.**A** = Suspected Aldol condensation product.**N** = Tentatively identified compound.**ANR** = Analysis not required.

Laboratory Report

September 25, 2024

Jacques Elias
US EPA Region 1

Project Number: 24090015

Project: Bradford Veneer - Bradford, VT

Analysis: BNAs in Product

EPA Chemist: Dan Boudreau

Date Samples Received by the Laboratory: 09/11/2024

Analytical Procedure:

All samples were received and logged in by the laboratory according to the USEPA New England Laboratory SOP for Sample Log-in.

Sample preparation and analysis was done following the EPA Region I SOP, LSBSOP-BNASOIL7.

The SOP for this method is based on the US EPA Contract Laboratory Program, Statement of Work for Organic Analysis, Multi-Media, Multi-Concentration, Exhibit B, Analytical Methods for Semivolatiles, Revision OLM04.2, 1999 , US EPA SW-846 methods 3585 and 8270E and LSBSOP-BNAGCMS11

Data were reviewed in accordance with the internal verification procedures described in the EPA New England Quality Manual for NERL.

Results relate only to the items tested or to the samples as received by the Laboratory. This analytical report shall not be reproduced except in full, without written approval of the laboratory.

If you have any questions please call me at 617-918-8340 .

Sincerely,

**DANIEL
BOUDREAU**

Qualifiers:

Page 2 of 66

RL = Reporting limit**ND** = Not Detected above Reporting limit**NA** = Not Applicable due to high sample dilutions or sample interferences**NC** = Not calculated since analyte concentration is ND.**J** = Estimated value**J1** = Estimated value due to MS recovery outside acceptance criteria**J2** = Estimated value due to LFB result outside acceptance criteria**J3** = Estimated value due to RPD result outside acceptance criteria**J4** = Estimated value due to LCS result outside acceptance criteria**E** = Estimated value exceeds the calibration range**L** = Estimated value is below the calibration range**B** = Analyte is associated with the lab blank or trip blank contamination. Values are qualified when the observed concentration of the contamination in the sample extract is less than 10 times the concentration in the blank.**R** = No recovery was calculated since the analyte concentration is greater than four times the spike level.**P** = The confirmation value exceeded 35% difference and is less than 100%. The lower value is reported.**C** = The identification has been confirmed by GC/MS.**A** = Suspected Aldol condensation product.**N** = Tentatively identified compound.**ANR** = Analysis not required.

Laboratory Report

September 26, 2024

Jacques Elias
US EPA Region 1

Project Number: 24090015

Project: Bradford Veneer - Bradford, VT

Analysis: Pesticides and PCBs in Product

EPA Chemist: Phillip Gudgel

Date Samples Received by the Laboratory: 09/11/2024

Analytical Procedure:

All samples were received and logged in by the laboratory according to the USEPA New England Laboratory SOP for Sample Log-in.

Sample preparation and analysis was done following the EPA Region I SOP, PESTSOIL2.SOP.

Data were reviewed in accordance with the internal verification procedures described in the EPA New England Quality Manual for NERL.

Results relate only to the items tested or to the samples as received by the Laboratory. This analytical report shall not be reproduced except in full, without written approval of the laboratory.

If you have any questions please call me at .

Sincerely,

DANIEL BOUDREAU

Qualifiers:

Page 2 of 43

RL = Reporting limit**ND** = Not Detected above Reporting limit**NA** = Not Applicable due to high sample dilutions or sample interferences**NC** = Not calculated since analyte concentration is ND.**J** = Estimated value**J1** = Estimated value due to MS recovery outside acceptance criteria**J2** = Estimated value due to LFB result outside acceptance criteria**J3** = Estimated value due to RPD result outside acceptance criteria**J4** = Estimated value due to LCS result outside acceptance criteria**E** = Estimated value exceeds the calibration range**L** = Estimated value is below the calibration range**B** = Analyte is associated with the lab blank or trip blank contamination. Values are qualified when the observed concentration of the contamination in the sample extract is less than 10 times the concentration in the blank.**R** = No recovery was calculated since the analyte concentration is greater than four times the spike level.**P** = The confirmation value exceeded 35% difference and is less than 100%. The lower value is reported.**C** = The identification has been confirmed by GC/MS.**A** = Suspected Aldol condensation product.**N** = Tentatively identified compound.**ANR** = Analysis not required.

Laboratory Report

September 16, 2024

Jacques Elias
US EPA Region 1

Project Number: 24090015

Project: Bradford Veneer - Bradford, VT

Analysis: Field Analysis of Metals by XRF

EPA Chemist: Scott Clifford

Date Samples Received by the Laboratory: 09/12/2024

Analytical Procedure:

All samples were received and logged in by the laboratory according to the USEPA New England Laboratory SOP for Sample Log-in.

Sample preparation and analysis was done following the EPA Region I SOP, SOP-FLDNitron7/OI.

The sample preparation and analysis SOP used was one of the following: FLDOLYMPUS6, or FLDNITON7,

Samples were analyzed using one of the following:

Niton XL3t 600 x-ray fluorescence (XRF) instrument equipped with a 50 kV X-ray tube and a high resolution Si pin detector.

Olympus Delta DP 4050 x-ray fluorescence (XRF) instrument equipped with a 50 kV X-ray tube and a high resolution silicon drift detector.

Innovex Alpha 4000 x-ray fluorescence (XRF) instrument equipped with a 40 kV X-ray tube and a high resolution Si pin detector.

Data were reviewed in accordance with the internal verification procedures described in the EPA New England Quality Manual for NERL.

Results relate only to the items tested or to the samples as received by the Laboratory. This analytical report shall not be reproduced except in full, without written approval of the laboratory.

If you have any questions please call me at 617-918-8340 .

Sincerely,

**DANIEL
BOUDREAU**

Qualifiers:

Page 2 of 23

RL = Reporting limit**ND** = Not Detected above Reporting limit**NA** = Not Applicable due to high sample dilutions or sample interferences**NC** = Not calculated since analyte concentration is ND.**J** = Estimated value**J1** = Estimated value due to MS recovery outside acceptance criteria**J2** = Estimated value due to LFB result outside acceptance criteria**J3** = Estimated value due to RPD result outside acceptance criteria**J4** = Estimated value due to LCS result outside acceptance criteria**E** = Estimated value exceeds the calibration range**L** = Estimated value is below the calibration range**B** = Analyte is associated with the lab blank or trip blank contamination. Values are qualified when the observed concentration of the contamination in the sample extract is less than 10 times the concentration in the blank.**R** = No recovery was calculated since the analyte concentration is greater than four times the spike level.**P** = The confirmation value exceeded 35% difference and is less than 100%. The lower value is reported.**C** = The identification has been confirmed by GC/MS.**A** = Suspected Aldol condensation product.**N** = Tentatively identified compound.**ANR** = Analysis not required.
