Notes:

The EPA uses air monitors to track small particles in the air called PM¹⁰, which are less than 10 micrometers in size. These particles can include dust, dirt, smoke, or asbestos fibers. The air monitors measure the average amount of PM¹⁰ in the air over 15 minutes. If the amount of PM¹⁰ is above 150 µg/m³, the monitors alert the EPA and workers on-site. If this happens, all site activities will stop, results are reported to the EPA, and dust control measures are re-evaluated. It's important to note that high levels of PM¹⁰ do not necessarily mean there is asbestos in the air. The monitors only measure the amount of particles, not what they are made of.

¹Action level utilized on-site is currently 150 µg/m³ with PM₁₀, which is compared to the average air monitoring measurement over a 15-minute period. If the action level is exceeded for a 15-minute period, on-site safety procedures are to suspend site activities, report results to the EPA On-Scene Coordinator and re-evaluate dust suppression measures.

Air monitoring is not performed during inclement weather conditions/rain and thunderstorms.
