

EPA Air Monitoring Data Collected During the Brent Industries Fire Response
Toledo, Ohio
August 18 – 27, 2026

- EPA conducted air monitoring surrounding the Brent Industries fire from August 18, 2026, at 12:15 p.m. through August 27, 2026, to measure airborne concentrations of particulate matter, or PM, and volatile organic compounds, or VOCs.
- Particulate matter measurements were compared to the National Ambient Air Quality Standards.
- VOC measurements were compared to a screening level of 5 parts per million, or ppm, based on the benzene Occupational Safety and Health Administration's, or OSHA, short-term exposure limit using the most conservative numbers.
- Air monitoring was conducted at 21 locations, for a total of 715 measurements
 - Three PM10 measurements exceeded the screening level of 0.15 mg/m³:
 - At location Oil Collection Boom 1, PM10 was measured at 1.273 mg/m³ at 21:59 on August 19, 2026. Crews were observed on-site moving debris to extinguish hot spots, which generated additional smoke.
 - At location FL01, PM10 was measured at 0.52 mg/m³ at 8:34 on August 18, 2026. Smoke was not observed at this location at the time of measurement.
 - At location FL02, PM10 was measured at 0.17 mg/m³ at 8:52 on August 19, 2026. Smoke was not observed at this location at the time of measurement.
 - Ten PM2.5 measurements, ranging from 0.036 to 0.9 mg/m³, exceeded the screening level of 0.035 mg/m³. These measurements were collected at locations Oil Collection Boom 1, FL01, FL02, and FL03.
 - At location Oil Collection Boom 1, crews were observed on-site moving debris to extinguish hot spots, which generated additional smoke.
 - Smoke was not observed at the time of measurements collected at locations FL01, FL02, and FL03.
- No VOC measurements exceeded the screening level of 5 ppm.

Legend

- Roving Air Monitoring Locations
- Oil Collection Boom Locations
- Approximate Fire Location

Notes:

mg/m3 - Milligrams per cubic meter
PM10 - Particulate matter with diameter of 10 micron or less
Results compared to screening level of 0.15 mg/m3 based on National Ambient Air Quality Standards per 40 U.S. Code of Federal Regulations Part 50. Results greater than screening level are **bolded**
EPA began air monitoring on 8/18/2026 at 12:15 PM and continued through 8/27/2026, when contractors for the potentially responsible party began monitoring

Notes

- 1 The screening level for VOCs is based on the benzene Occupational Safety and Health Administration (OSHA) short-term exposure limit (STEL), as it is the most conservative of the established STELs for VOCs.
- 2 The site-specific screening levels for particulates and CO are based on National Ambient Air Quality Standards (NAAQS) per 40 U.S. Code of Federal Regulations (CFR) Part 50.
- 3 The screening levels for LEL and O₂ are based on occupational exposure values that apply to workers.
- 4 The screening level for H₂S is based on the AEGL-1 for an 8-hour exposure period.
- 5 The screening level for NH₃ is based on the ATSDR MRL; the MRL for acute exposure is 1.7 ppm, and the MRL for chronic exposure is 0.1 ppm.

The site-specific screening levels have been provided by EPA.

Abbreviations

%	percent
AEGL	Acute Exposure Guideline Levels
ATSDR	Agency for Toxic Substances and Disease Registry
CO	carbon monoxide
EDT	Eastern Daylight Time
EPA	U.S. Environmental Protection Agency
H ₂ S	hydrogen sulfide
LEL	lower explosive limit
mg/m ³	milligrams per cubic meter
MRL	Minimal Risk Level
NE	not established
NH ₃	ammonia
O ₂	oxygen
OSHA	Occupational Safety and Health Administration
PM _{2.5}	particulate matter with diameters less than 2.5 microns
PM ₁₀	particulate matter with diameters less than 10 microns
ppm	parts per million
STEL	short-term exposure limit
VOC	volatile organic compounds

Location ID Abbreviations

FL	Field location (location chosen by field personnel based on on-site observations/activities)
N	Northeast
NE	Northeast
SR	Sensitive receptor
W	West

Monitoring results highlighted in yellow exceed the site-specific screen
