Organic Data Qualifiers

U Indicates the analyte was analyzed for but not detected. The number adjacent to the "U" qualifier indicates the reporting limit for that analyte. The reporting limit can vary from sample to sample depending on dilution factors or the percent moisture adjustment when indicated.

J Indicates estimated value. It is used when the data indicates the presence of an analyte above the method detection limit (MDL) yet lower than the reporting limit.

B Indicates the analyte was found in the associated blank as well as in the sample. The notation indicates possible contamination of the sample.

E Indicates the value reported is above the highest calibration standard for that analyte. The sample should be analyzed at an appropriate dilution. "E" qualified values are estimations and the diluted result may be reported on another Form 1.

D Indicates the analyte has been identified in a dilution reanalysis. "D" qualifiers are used for samples that have been analyzed at a lesser dilution than required for accurate quantitation.

C The "C" qualifier indicates the presence of this analyte has been confirmed by GC/MS analysis.

P This qualifier is used for pesticide / Aroclor target analytes where there is greater than 25% difference for the detected concentration between the two GC columns.

N This qualifier indicates presumptive evidence of an analyte. This qualifier is only used for tentatively identified compounds (TIC), where the identification is based on a mass spectral library search. It is applied to all TIC results. For generic characterization of a TIC, such as chlorinated hydrocarbon, the "N" qualifier is not used.

A This qualifier indicates that a TIC is a suspected aldol-condensation product.

X Data flagged as rejected by analyst utilizing analytical judgement.

Organic Sample ID Qualifiers

The qualifiers that may be appended to the lab sample ID and/or the client sample ID for organic analysis are defined below:

DL Diluted reanalysis. Indicates that the results of the original analysis of the sample contained compounds that exceeded the calibration range. The sample was diluted and reanalyzed. May be followed by a digit to indicate multiple dilutions of the sample. The results of more than one diluted reanalysis may be reported.

R Reanalysis. The extract was reanalyzed without re-extraction. The "R" is not used if the sample was also re-extracted. May be followed by a digit to indicate multiple reanalysis of the sample at the same dilution.

RE Re-extracted. The extract was reanalyzed with re-extraction. May be followed by a digit to indicate multiple re-extraction of the same sample at the same dilution.

MS Matrix spike (may be followed by a digit to indicate multiple matrix within a sample set).

SD Matrix spike duplicate (may be followed by a digit to indicate multiple matrix spike duplicate within a sample set).

C (Concentration) Qualifier - Entries and their meanings are:

B The reported value obtained was less than the RL but greater than or equal to the MDL.

E The reported value obtained was over calibration or linear range.

U The reported value obtained was less than the MDL or was not detected.

Q Qualifier - Entries and their meanings are:

U The reported value is estimated because of interference. An explanatory comment must be included under "Comments" on the Cover Page if the problem applies to all samples in this data package or on the individual FORM 1 if it is an isolated problem.

M Duplicate injection precision was not met (two analyses of the same sample did not agree).

N Spiked sample recovery not within control limits.

E Serial Dilution percent difference not within control limits.

S The reported value was determined by the Method of Standard Additions (MSA).

W Post-digestion spike for Furnace AA analysis is out of control limits (85-115%) while sample absorbance is less than 50% of spike absorbance.

***** Duplicate analysis not within control limits.

+ Correlation coefficient for the MSA is less than 0.995.

X The data is flagged as rejected by analyst utilizing analytical judgement.

Entering "S", "W", or "+" is mutually exclusive. No combination of these qualifiers can apear in the same field.

Inorganic Sample ID Qualifiers

The qualifiers that may be appended to the lab sample ID and/or the client sample ID for inorganic analysis are defined below:

DL Diluted reanalysis. Indicates that the results of the original analysis of the sample contained compounds that exceeded the calibration range. The sample was diluted and reanalyzed. May be followed by a digit to indicate multiple dilutions of the sample. The results of more than one diluted reanalysis may be reported.

R Reanalysis. The extract was reanalyzed without re-extraction. The "R" is not used if the sample was also re-extracted. May be followed by a digit to indicate multiple reanalysis of the sample at the same dilution.

RE Re-extracted. The extract was reanalyzed with re-extraction. May be followed by a digit to indicate multiple re-extraction of the same sample at the same dilution.

MS Matrix spike (may be followed by a digit to indicate multiple matrix within a sample set).

SD Matrix spike duplicate (may be followed by a digit to indicate multiple matrix spike duplicate within a sample set).

A Post Digestion Spike.

L Serial Dilution.

Organic Data Qualifiers

U Indicates the analyte was analyzed for but not detected. The number adjacent to the "U" qualifier indicates the reporting limit for that analyte. The reporting limit can vary from sample to sample depending on dilution factors or the percent moisture adjustment when indicated.

J Indicates estimated value. It is used when the data indicates the presence of an analyte above the method detection limit (MDL) yet lower than the reporting limit.

B Indicates the analyte was found in the associated blank as well as in the sample. The notation indicates possible contamination of the sample.

E Indicates the value reported is above the highest calibration standard for that analyte. The sample should be analyzed at an appropriate dilution. "E" qualified values are estimations and the diluted result may be reported on another Form 1.

D Indicates the analyte has been identified in a dilution reanalysis. "D" qualifiers are used for samples that have been analyzed at a lesser dilution than required for accurate quantitation.

C The "C" qualifier indicates the presence of this analyte has been confirmed by GC/MS analysis.

P This qualifier is used for pesticide / Aroclor target analytes where there is greater than 25% difference for the detected concentration between the two GC columns.

N This qualifier indicates presumptive evidence of an analyte. This qualifier is only used for tentatively identified compounds (TIC), where the identification is based on a mass spectral library search. It is applied to all TIC results. For generic characterization of a TIC, such as chlorinated hydrocarbon, the "N" qualifier is not used.

A This qualifier indicates that a TIC is a suspected aldol-condensation product.

X Data flagged as rejected by analyst utilizing analytical judgement.

Organic Sample ID Qualifiers

The qualifiers that may be appended to the lab sample ID and/or the client sample ID for organic analysis are defined below:

DL Diluted reanalysis. Indicates that the results of the original analysis of the sample contained compounds that exceeded the calibration range. The sample was diluted and reanalyzed. May be followed by a digit to indicate multiple dilutions of the sample. The results of more than one diluted reanalysis may be reported.

R Reanalysis. The extract was reanalyzed without re-extraction. The "R" is not used if the sample was also re-extracted. May be followed by a digit to indicate multiple reanalysis of the sample at the same dilution.

RE Re-extracted. The extract was reanalyzed with re-extraction. May be followed by a digit to indicate multiple re-extraction of the same sample at the same dilution.

MS Matrix spike (may be followed by a digit to indicate multiple matrix within a sample set).

SD Matrix spike duplicate (may be followed by a digit to indicate multiple matrix spike duplicate within a sample set).

C. Surrogates:

All acceptance criteria were met with the exception of:

PEL Lab Reference No./SDG: 2507182

Client: T N & Associates, Inc.

Sample NPP-CARBON1 was recovered below criteria for the following surrogate(s): 2,4,6-Tribromophenol at 0 % with criteria of (19-122).

Sample NPP-T03 was recovered below criteria for the following surrogate(s): 2,4,6-Tribromophenol at 0 % with criteria of (19-122).

Sample NPP-T10 was recovered below criteria for the following surrogate(s): 2,4,6-Tribromophenol at 14.2 % with criteria of (19-122).

Sample NPP-T11 was recovered below criteria for the following surrogate(s): 2,4,6-Tribromophenol at 1.5 % with criteria of (19-122).

Sample NPP-T14 was recovered below criteria for the following surrogate(s): 2,4,6-Tribromophenol at 0 % with criteria of (19-122), Phenol-d5 at 11.3 % with criteria of (24-113).

Sample NPP-T15 was recovered below criteria for the following surrogate(s): 2,4,6-Tribromophenol at 0 % with criteria of (19-122), 2-Fluorophenol at 22.3 % with criteria of (25-121), Phenol-d5 at 6.9 % with criteria of (24-113).

Sample NPP-T16 was recovered above criteria for the following surrogate(s): Phenol-d5 at 114 % with criteria of (24-113).

Sample NPP-T16-DUP was recovered above criteria for the following surrogate(s): Phenol-d5 at 114 % with criteria of (24-113).

Sample NPP-T17 was recovered below criteria for the following surrogate(s): Phenol-d5 at 7.4 % with criteria of (24-113) and was recovered above criteria for the following surrogate(s): 2-Fluorophenol at 122 % with criteria of (25-121).

Sample NPP-T20 was recovered below criteria for the following surrogate(s): 2,4,6-Tribromophenol at 0 % with criteria of (19-122).

Sample NPP-T25 was recovered below criteria for the following surrogate(s): 2,4,6-Tribromophenol at 0 % with criteria of (19-122).

Sample NPP-T26 was recovered below criteria for the following surrogate(s): 2,4,6-Tribromophenol at 0 % with criteria of (19-122).

Sample NPP-T27 was recovered below criteria for the following surrogate(s): 2,4,6-Tribromophenol at 0 % with criteria of (19-122), 2-Fluorophenol at 17 % with criteria of (25-121), Phenol-d5 at 13.3 % with criteria of (24-113).

Samples coded accordingly. The most probable cause for surrogate variances is matrix interference.

D. Spikes:

1. Laboratory Control Spikes (LCS)

All acceptance criteria were met with the exception of:

PEL Lab Reference No./SDG: 2507182

Client: T N & Associates, Inc.

LCS 3202LCS was analyzed with the soil samples extracted on 07/18/07. The following analyte(s) were recovered below criteria: 2,4-Dinitrophenol at 0 % with criteria of (29-130), 3-Nitroaniline at 75.8 % with criteria of (76-110), Benzidine at 0 % with criteria of (10-149), Benzoic acid at 0 % with criteria of (10-106), Pentachlorophenol at 29 % with criteria of (36-120). The following analyte(s) had marginal exceedance limit failures: 2,4-Dinitrophenol at 0 % with criteria of (12.2-146.8).

Samples coded accordingly. The most probable cause for low recoveries in the LCS is the spike being diluted out since the final volume is 10 mL and the spike amount was not increased. This resulted in the spike concentration being near the RL.

2. Matrix Spike/Matrix Spike Duplicate Samples (MS/SD)

A client requested MS/SD set was analyzed.
All percent recovery and relative percent difference (RPD) criteria were met with the exception of:
MS - NPP-T16-MS was analyzed with the soil samples extracted on 07/18/07. The following analyte(s) were recovered below criteria: 2,4,6-Trichlorophenol at 35.9 % with criteria of (47-181), 2,4-Dinitrophenol at 0 % with criteria of (10-174), 2-Methyl-4,6-dinitrophenol at 0 % with criteria of (19-138), 4-Nitrophenol at 0 % with criteria of (46-144), Benzoic acid at 0 % with criteria of (10-127), Hexachlorocyclopentadiene at 0 % with criteria of (15-114), Pentachlorophenol at 0 % with criteria of (10-223) and the following analyte(s) were recovered above criteria: Aniline at 185 % with criteria of (45-119).

SD - NPP-T16-SD was analyzed with the soil samples extracted on 07/18/07. The following analyte(s) were recovered below criteria: 2,4,6-Trichlorophenol at 45.7 % with criteria of (47-181), 2,4-Dinitrophenol at 0 % with criteria of (10-174), 2-Methyl-4,6-dinitrophenol at 0 % with criteria of (19-138), 4-Nitrophenol at 0 % with criteria of (46-144), Benzoic acid at 0 % with criteria of (10-127), Benzyl alcohol at 0 % with criteria of (45-131), Hexachlorocyclopentadiene at 0 % with criteria of (15-114), Pentachlorophenol at 0 % with criteria of (10-223) and the following analyte(s) were recovered above criteria: 1-Methylnaphthalene at 133 % with criteria of (59-126), Aniline at 186 % with criteria of (45-119). The following analyte(s) exceeded RPD criteria: 2,4,5-Trichlorophenol at 27.2 % with criteria of (27), Benzyl alcohol at 200 % with criteria of (23).

Samples coded accordingly. The most probable cause for low recoveries in the MS/MSD is matrix interference in addition to the spike being diluted out since the final volume is 10 mL and the spike amount was not increased. This resulted in the spike concentration being near the RL.

E. Internal Standards:

All acceptance criteria were met.

CASE NARRATIVE

I. RECEIPT

No exceptions were encountered unless a Sample Receipt Exception Report is attached to the Chain-of-Custody or a communication form is included in the addendum with this package.

II. HOLDING TIMES

A. Sample Preparation: All holding times were met.

B. Sample Analysis: All holding times were met.

III. METHODS

EPA SW846 8082 for Aroclor analysis.

IV. PREPARATION

Soil samples were prepared by SW846 EPA 3550 for 8082 semi-volatile analysis.

V. ANALYSIS

A. Calibration:

All acceptance criteria were met.

B. Blanks:

All acceptance criteria were met.

C. Surrogates:

All acceptance criteria were met with the exception of:
Sample NPP-T16-MS was recovered above criteria for the following surrogate(s):
Decachlorobiphenyl at 156 % with criteria of (33-140).

Sample NPP-T16-SD was recovered above criteria for the following surrogate(s):
Decachlorobiphenyl at 155 % with criteria of (33-140).

Since these samples were prepared by waste dilution and the criteria are for soil ASE extraction, and the recoveries were above the control limits, and there were no target analytes found in the associated samples, it is safe to say that had the analytes been in the samples they would have been detected, so no further action was taken.

Samples coded accordingly.

The following samples had surrogates that were diluted out: NPP-T06 NPP-T26

D. Spikes:

CASE NARRATIVE
POLYCHLORINATED BIPHENYLS (PCB) SEMIVOLATILE ORGANIC

PEL Lab Reference No./SDG: 2507182

Client: T N & Associates, Inc.

PCB 1016 and PCB 1260 were used as the spiking solution for all QC spikes.

1. Laboratory Control Spikes (LCS)

All acceptance criteria were met with the exception of:
LCS 194LCS was analyzed with the soil samples extracted on 07/17/07. The following analyte(s) were recovered above criteria: Aroclor-1260 at 133 % with criteria of (60-125).

LCS 210LCSD was analyzed with the soil samples extracted on 07/20/07. The following analyte(s) were recovered above criteria: Aroclor-1260 at 130 % with criteria of (60-125).

Since these samples were prepared by waste dilution and the criteria are for soil ASE extraction, and the recoveries were above the control limits, and there were no target analytes found in the associated samples, it is safe to say that had the analytes been in the samples they would have been detected, and no further action was taken.

Samples coded accordingly.

2. Matrix Spike/Matrix Spike Duplicate Samples (MS/SD)

A client requested MS/SD set was analyzed.
All percent recovery and relative percent difference (RPD) criteria were met with the exception of:
MS - NPP-T16-MS was analyzed with the soil samples extracted on 07/17/07. The following analyte(s) were recovered above criteria: Aroclor-1016 at 184 % with criteria of (46-116), Aroclor-1260 at 187 % with criteria of (12-123).

SD - NPP-T16-SD was analyzed with the soil samples extracted on 07/17/07. The following analyte(s) were recovered above criteria: Aroclor-1016 at 177 % with criteria of (46-116), Aroclor-1260 at 177 % with criteria of (12-123).

Since these samples were prepared by waste dilution and the criteria are for soil ASE extraction, and the recoveries were above the control limits, and there were no target analytes found in the associated samples, it is safe to say that had the analytes been in the samples they would have been detected, and no further action was taken.

Samples coded accordingly.

E. Internal Standards:

This method does not require the use of internal standards.

F. Samples:

Sample analysis proceeded normally.

Inorganic Data Qualifiers

C (Concentration) Qualifier - Entries and their meanings are:

B The reported value obtained was less than the RL but greater than or equal to the MDL.

E The reported value obtained was over calibration or linear range.

U The reported value obtained was less than the MDL or was not detected.

Q Qualifier - Entries and their meanings are:

U The reported value is estimated because of interference. An explanatory comment must be included under "Comments" on the Cover Page if the problem applies to all samples in this data package or on the individual FORM 1 if it is an isolated problem.

M Duplicate injection precision was not met (two analyses of the same sample did not agree).

N Spiked sample recovery not within control limits.

E Serial Dilution percent difference not within control limits.

S The reported value was determined by the Method of Standard Additions (MSA).

W Post-digestion spike for Furnace AA analysis is out of control limits (85-115%) while sample absorbance is less than 50% of spike absorbance.

***** Duplicate analysis not within control limits.

+ Correlation coefficient for the MSA is less than 0.995.

X The data is flagged as rejected by analyst utilizing analytical judgement.

Entering "S", "W", or "+" is mutually exclusive. No combination of these qualifiers can apear in the same field.

M (Method) Qualifier - Enter one of the following:

P ICP
A Flame AA
F Furnace AA
CV Manual Cold Vapor AA
TC Total Organic Carbon
AS Semi-Automated Spectrophotometric
CA Midi-Distillation Spectrophotometric
T Titrimetric
C Manual Spectrophotometric
GR Gravimetric

Inorganic Sample ID Qualifiers

The qualifiers that may be appended to the lab sample ID and/or the client sample ID for inorganic analysis are defined below:

DL Diluted reanalysis. Indicates that the results of the original analysis of the sample contained compounds that exceeded the calibration range. The sample was diluted and reanalyzed. May be followed by a digit to indicate multiple dilutions of the sample. The results of more than one diluted reanalysis may be reported.

R Reanalysis. The extract was reanalyzed without re-extraction. The "R" is not used if the sample was also re-extracted. May be followed by a digit to indicate multiple reanalysis of the sample at the same dilution.

RE Re-extracted. The extract was reanalyzed with re-extraction. May be followed by a digit to indicate multiple re-extraction of the same sample at the same dilution.

MS Matrix spike (may be followed by a digit to indicate multiple matrix within a sample set).

SD Matrix spike duplicate (may be followed by a digit to indicate multiple matrix spike duplicate within a sample set).

A Post Digestion Spike.

L Serial Dilution.

Organic Data Qualifiers

U Indicates the analyte was analyzed for but not detected. The number adjacent to the "U" qualifier indicates the reporting limit for that analyte. The reporting limit can vary from sample to sample depending on dilution factors or the percent moisture adjustment when indicated.

J Indicates estimated value. It is used when the data indicates the presence of an analyte above the method detection limit (MDL) yet lower than the reporting limit.

B Indicates the analyte was found in the associated blank as well as in the sample. The notation indicates possible contamination of the sample.

E Indicates the value reported is above the highest calibration standard for that analyte. The sample should be analyzed at an appropriate dilution. "E" qualified values are estimations and the diluted result may be reported on another Form 1.

D Indicates the analyte has been identified in a dilution reanalysis. "D" qualifiers are used for samples that have been analyzed at a lesser dilution than required for accurate quantitation.

C The "C" qualifier indicates the presence of this analyte has been confirmed by GC/MS analysis.

P This qualifier is used for pesticide / Aroclor target analytes where there is greater than 25% difference for the detected concentration between the two GC columns.

N This qualifier indicates presumptive evidence of an analyte. This qualifier is only used for tentatively identified compounds (TIC), where the identification is based on a mass spectral library search. It is applied to all TIC results. For generic characterization of a TIC, such as chlorinated hydrocarbon, the "N" qualifier is not used.

A This qualifier indicates that a TIC is a suspected aldol-condensation product.

X Data flagged as rejected by analyst utilizing analytical judgement.

240707 1338

Organic Sample ID Qualifiers

The qualifiers that may be appended to the lab sample ID and/or the client sample ID for organic analysis are defined below:

DL Diluted reanalysis. Indicates that the results of the original analysis of the sample contained compounds that exceeded the calibration range. The sample was diluted and reanalyzed. May be followed by a digit to indicate multiple dilutions of the sample. The results of more than one diluted reanalysis may be reported.

R Reanalysis. The extract was reanalyzed without re-extraction. The "R" is not used if the sample was also re-extracted. May be followed by a digit to indicate multiple reanalysis of the sample at the same dilution.

RE Re-extracted. The extract was reanalyzed with re-extraction. May be followed by a digit to indicate multiple re-extraction of the same sample at the same dilution.

MS Matrix spike (may be followed by a digit to indicate multiple matrix within a sample set).

SD Matrix spike duplicate (may be followed by a digit to indicate multiple matrix spike duplicate within a sample set).

I. RECEIPT

No exceptions were encountered unless a Sample Receipt Exception Report is attached to the Chain-of-Custody or a communication form is included in the addendum with this package.

II. HOLDING TIMES

A. Sample Preparation: All holding times were met.

B. Sample Analysis: All holding times were met.

III. METHODS

EPA 8260B/SW846

IV. PREPARATION

Soil samples were prepared by SW846/5035 for EPA8260B volatiles analysis. All aspects of sample preparation proceeded without exception.

V. ANALYSIS

A. Calibration:

All acceptance criteria were met.

B. Blanks:

All acceptance criteria were met.

C. Surrogates:

All acceptance criteria were met with the exception of:

Sample NPP-CARBON2DL1 was recovered below criteria for the following surrogates: 1,2-Dichloroethane-d4 at 0 % with criteria of (71-124), 4-Bromofluorobenzene at 0 % with criteria of (54-126), Dibromofluoromethane at 0 % with criteria of (68-119), Toluene d8 at 0 % with criteria of (59-127). All surrogates were diluted out due to the high dilution. No further action was taken. Samples coded accordingly.

Client: T N & Associates, Inc.

E. Internal Standards:

All acceptance criteria were met.

F. Samples:

Sample analysis proceeded normally. Client specified reporting limits were used.

All samples were waste and were analyzed as high-level methanol dilutions of 1:50. Sample NPP-CARBON2 required an additional dilution of 1:1000 dilution due to high concentrations of the following analytes: 1,2,4-Trimethylbenzene, 1,2-Dichlorobenzene, 1,3,5-Trimethylbenzene, 4-Isopropyltoluene, Benzene, Chlorobenzene, Ethylbenzene, Isopropylbenzene (Cumene), n-Propylbenzene, o-Xylene, p,m-Xylene, Toluene. Both diluted runs are reported.

I certify that this data package is in compliance with the terms and conditions agreed to by the client and PEL, both technically and for completeness, except for the conditions noted above. Release of the data contained in this hardcopy data package has been authorized by the Laboratory Manager or designated person, as, verified by the following signature.

I. RECEIPT

No exceptions were encountered unless a Sample Receipt Exception Report is attached to the Chain-of-Custody or a communication form is included in the addendum with this package.

II. HOLDING TIMES

A. Sample Preparation: All holding times were met.

B. Sample Analysis: All holding times were met.

III. METHODS

EPA SW846 8082 for Aroclor analysis.

IV. PREPARATION

Soil samples were prepared by SW846 EPA 3550 for 8082 semi-volatile analysis.

V. ANALYSIS

A. Calibration:

All acceptance criteria were met.

B. Blanks:

All acceptance criteria were met.

C. Surrogates:

All acceptance criteria were met with the exception of:
Sample NPP-D36 was recovered above criteria for the following surrogate(s):
Decachlorobiphenyl at 141 % with criteria of (33-140).

Sample NPP-DIKE 1 was recovered above criteria for the following surrogate(s):
Decachlorobiphenyl at 141 % with criteria of (33-140).

Since these samples were prepared by waste dilution and the criteria are for soil ASE extraction, and the recoveries were above the control limits, and there were no target analytes found in the associated samples, it is safe to say that had the analytes been in the samples they would have been detected, and no further action was taken.

Samples coded accordingly.

D. Spikes:

PCB 1016 and PCB 1260 were used as the spiking solution for all QC spikes.

1. Laboratory Control Spikes (LCS)

CASE NARRATIVE
POLYCHLORINATED BIPHENYLS (PCB) SEMIVOLATILE ORGANIC

PEL Lab Reference No./SDG: 2507183

Client: T N & Associates, Inc.

All acceptance criteria were met with the exception of:
LCS 195LCS was analyzed with the soil samples extracted on 07/17/07. The following analyte(s) were recovered above criteria: Aroclor-1016 at 162 % with criteria of (40-140), Aroclor-1260 at 158 % with criteria of (60-125).
LCS 195LCSD was analyzed with the soil samples extracted on 07/17/07. The following analyte(s) were recovered above criteria: Aroclor-1260 at 140 % with criteria of (60-125).

Since these samples were prepared by waste dilution and the criteria are for soil ASE extraction, and the recoveries were above the control limits, and there were no target analytes found in the associated samples, it is safe to say that had the analytes been in the samples they would have been detected, and no further action was taken.

Samples coded accordingly.

2. Matrix Spike/Matrix Spike Duplicate Samples (MS/SD)

No spikes requested by client.

E. Internal Standards:

This method does not require the use of internal standards.

F. Samples:

Sample analysis proceeded normally.

I certify that this data package is in compliance with the terms and conditions agreed to by the client and PEL, both technically and for completeness, except for the conditions noted above. Inorganic Data Qualifiers

C (Concentration) Qualifier - Entries and their meanings are:

B The reported value obtained was less than the RL but greater than or equal to the MDL.

E The reported value obtained was over calibration or linear range.

U The reported value obtained was less than the MDL or was not detected.

Q Qualifier - Entries and their meanings are:

U The reported value is estimated because of interference. An explanatory comment must be included under "Comments" on the Cover Page if the problem applies to all samples in this data package or on the individual FORM 1 if it is an isolated problem.

M Duplicate injection precision was not met (two analyses of the same sample did not agree).

N Spiked sample recovery not within control limits.

E Serial Dilution percent difference not within control limits.

S The reported value was determined by the Method of Standard Additions (MSA).

W Post-digestion spike for Furnace AA analysis is out of control limits (85-115%) while sample absorbance is less than 50% of spike absorbance.

***** Duplicate analysis not within control limits.

+ Correlation coefficient for the MSA is less than 0.995.

X The data is flagged as rejected by analyst utilizing analytical judgement.

Entering "S", "W", or "+" is mutually exclusive. No combination of these qualifiers can apear in the same field.

M (Method) Qualifier - Enter one of the following:

P ICP
A Flame AA
F Furnace AA
CV Manual Cold Vapor AA
TC Total Organic Carbon
AS Semi-Automated Spectrophotometric
CA Midi-Distillation Spectrophotometric
T Titrimetric
C Manual Spectrophotometric
GR Gravimetric

Inorganic Sample ID Qualifiers

The qualifiers that may be appended to the lab sample ID and/or the client sample ID for inorganic analysis are defined below:

DL Diluted reanalysis. Indicates that the results of the original analysis of the sample contained compounds that exceeded the calibration range. The sample was diluted and reanalyzed. May be followed by a digit to indicate multiple dilutions of the sample. The results of more than one diluted reanalysis may be reported.

R Reanalysis. The extract was reanalyzed without re-extraction. The "R" is not used if the sample was also re-extracted. May be followed by a digit to indicate multiple reanalysis of the sample at the same dilution.

RE Re-extracted. The extract was reanalyzed with re-extraction. May be followed by a digit to indicate multiple re-extraction of the same sample at the same dilution.

MS Matrix spike (may be followed by a digit to indicate multiple matrix within a sample set).

SD Matrix spike duplicate (may be followed by a digit to indicate multiple matrix spike duplicate within a sample set).

A Post Digestion Spike.

L Serial Dilution.

Subject: RE: 2507183 8270

Russeill, regarding your concern for the lower than "typical" LCS recoveries on the 8270. The LCS was spiked at the normal level as an extractable soil sample where the final volume is 1 mL. The final volume on these waste sample, waste dilutions, is 10 mL. Therefore, the true values were much lower than typical which then caused a few more outliers.

Hope this helps.

Sample NPP-CARBON2 was recovered below criteria for the following surrogate(s): Phenol-d5 at 0 % with criteria of (24-113).

Sample NPP-D26 was recovered below criteria for the following surrogate(s): 2,4,6-Tribromophenol at 0 % with criteria of (19-122).

Sample NPP-D44 was recovered below criteria for the following surrogate(s): 2,4,6-Tribromophenol at 0 % with criteria of (19-122).

Sample NPP-DIKE 1 was recovered below criteria for the following surrogate(s): 2,4,6-Tribromophenol at 0 % with criteria of (19-122).

Sample NPP-TT-2 was recovered below criteria for the following surrogate(s): 2,4,6-

Tribromophenol at 0 % with criteria of (19-122).

Sample NPP-TT-3 was recovered below criteria for the following surrogate(s): 2,4,6-Tribromophenol at 0 % with criteria of (19-122).

Samples coded accordingly. The most probable cause for surrogate variances is matrix interference.

The following samples had surrogates that were diluted out: NPP-D36DL1

All acceptance criteria were met with the exception of:
LCS 3220LCS was analyzed with the soil samples extracted on 07/23/07. The following analyte(s) were recovered below criteria: 2,4-Dinitrophenol at 21 % with criteria of (29-130), Benzidine at 0 % with criteria of (10-149), Benzoic acid at 0 % with criteria of (10-106), and the following analyte(s) were recovered above criteria: 1,2-Dichlorobenzene at 95.6 % with criteria of (65-95), 4-Chloroaniline at 96.2 % with criteria of (57-95). The following analyte(s) had marginal exceedance limit failures: Benzyl alcohol at 46.8 % with criteria of (53.8-135.2).

LCS 3220LCSD was analyzed with the soil samples extracted on 07/23/07. The following analyte(s) were recovered below criteria: Benzidine at 0 % with criteria of (10-149), Benzoic acid at 0 % with criteria of (10-106), Benzyl alcohol at 53.9 % with criteria of (64-125). and the following analyte(s) were recovered above criteria: 1,3-Dichlorobenzene at 103 % with criteria of (67-100), 2-Methylnaphthalene at 106 % with criteria of (72-105), N-Nitrosodiphenylamine at 116 % with criteria of (77-115). The following analyte(s) exceeded RPD criteria: 2,4-Dinitrophenol at 38.7 % with criteria of (30). The following analyte(s) had marginal exceedance limit failures: 1,2-Dichlorobenzene at 101 % with criteria of (60-100), 4-Chloroaniline at 102 % with criteria of (50.7-101.3).

Samples coded accordingly. Since all other criteria were met, no further action was taken.

Organic Data Qualifiers

U Indicates the analyte was analyzed for but not detected. The number adjacent to the "U" qualifier indicates the reporting limit for that analyte. The reporting limit can vary from sample to sample depending on dilution factors or the percent moisture adjustment when indicated.

J Indicates estimated value. It is used when the data indicates the presence of an analyte above the method detection limit (MDL) yet lower than the reporting limit.

B Indicates the analyte was found in the associated blank as well as in the sample. The notation indicates possible contamination of the sample.

E Indicates the value reported is above the highest calibration standard for that analyte. The sample should be analyzed at an appropriate dilution. "E" qualified values are estimations and the diluted result may be reported on another Form 1.

D Indicates the analyte has been identified in a dilution reanalysis. "D" qualifiers are used for samples that have been analyzed at a lesser dilution than required for accurate quantitation.

C The "C" qualifier indicates the presence of this analyte has been confirmed by GC/MS analysis.

P This qualifier is used for pesticide / Aroclor target analytes where there is greater than 25% difference for the detected concentration between the two GC columns.

N This qualifier indicates presumptive evidence of an analyte. This qualifier is only used for tentatively identified compounds (TIC), where the identification is based on a mass spectral library search. It is applied to all TIC results. For generic characterization of a TIC, such as chlorinated hydrocarbon, the "N" qualifier is not used.

A This qualifier indicates that a TIC is a suspected aldol-condensation product.

X Data flagged as rejected by analyst utilizing analytical judgement.

Organic Sample ID Qualifiers

The qualifiers that may be appended to the lab sample ID and/or the client sample ID for organic analysis are defined below:

DL Diluted reanalysis. Indicates that the results of the original analysis of the sample contained compounds that exceeded the calibration range. The sample was diluted and reanalyzed. May be followed by a digit to indicate multiple dilutions of the sample. The results of more than one diluted reanalysis may be reported.

R Reanalysis. The extract was reanalyzed without re-extraction. The "R" is not used if the sample was also re-extracted. May be followed by a digit to indicate multiple reanalysis of the sample at the same dilution.

RE Re-extracted. The extract was reanalyzed with re-extraction. May be followed by a digit to indicate multiple re-extraction of the same sample at the same dilution.

MS Matrix spike (may be followed by a digit to indicate multiple matrix within a sample set).

SD Matrix spike duplicate (may be followed by a digit to indicate multiple matrix spike duplicate within a sample set).

D. Spikes:

1. Laboratory Control Spikes (LCS)

All acceptance criteria were met with the exception of:
LCS 3208LCS was analyzed with the soil samples extracted on 07/19/07. The multiple analyte(s) were recovered below criteria
Samples coded accordingly. The client was notified. Per client request, since the MS/MSD passed most criteria and sample surrogates all met criteria, no further action was taken.

2. Matrix Spike/Matrix Spike Duplicate Samples (MS/SD)

A client requested MS/SD set was analyzed.
All percent recovery and relative percent difference (RPD) criteria were met with the exception of:
MS - NPP-SB02 MS (3-4) was analyzed with the soil samples extracted on 07/19/07. The following analyte(s) were recovered below criteria: Bis(2-Chloroethyl)ether at 81 % with criteria of (86-133).

SD - NPP-SB02 MSD (3-4) was analyzed with the soil samples extracted on 07/19/07. The following analyte(s) were recovered below criteria: Aniline at 30 % with criteria of (45-119), Bis(2-Chloroethyl)ether at 80.5 % with criteria of (86-133). The following analyte(s) exceeded RPD criteria: 4-Chloroaniline at 34.3 % with criteria of (30), Aniline at 45.1 % with criteria of (18), Benzoic acid at 13 % with criteria of (11).

Samples coded accordingly.

E. Internal Standards:

All acceptance criteria were met.

F. Samples:

Sample analysis proceeded normally.

Q Qualifier - Entries and their meanings are:

U The reported value is estimated because of interference. An explanatory comment must be included under "Comments" on the Cover Page if the problem applies to all samples in this data package or on the individual FORM 1 if it is an isolated problem.

M Duplicate injection precision was not met (two analyses of the same sample did not agree).

N Spiked sample recovery not within control limits.

E Serial Dilution percent difference not within control limits.

S The reported value was determined by the Method of Standard Additions (MSA).

W Post-digestion spike for Furnace AA analysis is out of control limits (85-115%) while sample absorbance is less than 50% of spike absorbance.

***** Duplicate analysis not within control limits.

+ Correlation coefficient for the MSA is less than 0.995.

X The data is flagged as rejected by analyst utilizing analytical judgement.

Entering "S", "W", or "+" is mutually exclusive. No combination of these qualifiers can apear in the same field.

M (Method) Qualifier - Enter one of the following:

P ICP
A Flame AA
F Furnace AA
CV Manual Cold Vapor AA
TC Total Organic Carbon
AS Semi-Automated Spectrophotometric
CA Midi-Distillation Spectrophotometric
T Titrimetric
C Manual Spectrophotometric

Inorganic Sample ID Qualifiers

The qualifiers that may be appended to the lab sample ID and/or the client sample ID for inorganic analysis are defined below:

DL Diluted reanalysis. Indicates that the results of the original analysis of the sample contained compounds that exceeded the calibration range. The sample was diluted and reanalyzed. May be followed by a digit to indicate multiple dilutions of the sample. The results of more than one diluted reanalysis may be reported.

R Reanalysis. The extract was reanalyzed without re-extraction. The "R" is not used if the sample was also re-extracted. May be followed by a digit to indicate multiple reanalysis of the sample at the same dilution.

RE Re-extracted. The extract was reanalyzed with re-extraction. May be followed by a digit to indicate multiple re-extraction of the same sample at the same dilution.

MS Matrix spike (may be followed by a digit to indicate multiple matrix within a sample set).

SD Matrix spike duplicate (may be followed by a digit to indicate multiple matrix spike duplicate within a sample set).

A Post Digestion Spike.

L Serial Dilution.

Good afternoon.

Darcy is on vacation this week.

Please note regarding the 8270 analysis:
Although the LCS failed low, a client requested MS/MSD met almost all criteria and all samples passed surrogate recoveries. I have attached the summary forms for you review.

Please advise.

Organic Data Qualifiers

U Indicates the analyte was analyzed for but not detected. The number adjacent to the "U" qualifier indicates the reporting limit for that analyte. The reporting limit can vary from sample to sample depending on dilution factors or the percent moisture adjustment when indicated.

J Indicates estimated value. It is used when the data indicates the presence of an analyte above the method detection limit (MDL) yet lower than the reporting limit.

B Indicates the analyte was found in the associated blank as well as in the sample. The notation indicates possible contamination of the sample.

E Indicates the value reported is above the highest calibration standard for that analyte. The sample should be analyzed at an appropriate dilution. "E" qualified values are estimations and the diluted result may be reported on another Form 1.

D Indicates the analyte has been identified in a dilution reanalysis. "D" qualifiers are used for samples that have been analyzed at a lesser dilution than required for accurate quantitation.

C The "C" qualifier indicates the presence of this analyte has been confirmed by GC/MS analysis.

P This qualifier is used for pesticide / Aroclor target analytes where there is greater than 25% difference for the detected concentration between the two GC columns.

N This qualifier indicates presumptive evidence of an analyte. This qualifier is only used for tentatively identified compounds (TIC), where the identification is based on a mass spectral library search. It is applied to all TIC results. For generic characterization of a TIC, such as chlorinated hydrocarbon, the "N" qualifier is not used.

A This qualifier indicates that a TIC is a suspected aldol-condensation product.

X Data flagged as rejected by analyst utilizing analytical judgement.

Organic Sample ID Qualifiers

The qualifiers that may be appended to the lab sample ID and/or the client sample ID for organic analysis are defined below:

DL Diluted reanalysis. Indicates that the results of the original analysis of the sample contained compounds that exceeded the calibration range. The sample was diluted and reanalyzed. May be followed by a digit to indicate multiple dilutions of the sample. The results of more than one diluted reanalysis may be reported.

R Reanalysis. The extract was reanalyzed without re-extraction. The "R" is not used if the sample was also re-extracted. May be followed by a digit to indicate multiple reanalysis of the sample at the same dilution.

RE Re-extracted. The extract was reanalyzed with re-extraction. May be followed by a digit to indicate multiple re-extraction of the same sample at the same dilution.

MS Matrix spike (may be followed by a digit to indicate multiple matrix within a sample set).

SD Matrix spike duplicate (may be followed by a digit to indicate multiple matrix spike duplicate within a sample set).

I. RECEIPT

No exceptions were encountered unless a Sample Receipt Exception Report is attached to the Chain-of-Custody or a communication form is included in the addendum with this package.

II. HOLDING TIMES

A. Sample Preparation: All holding times were met.

B. Sample Analysis: All holding times were met.

III. METHODS

EPA SW846 8270

IV. PREPARATION

Soil samples were prepared by SW846 EPA 3545 for 8270 semi-volatile analysis.

V. ANALYSIS

A. Calibration:

All acceptance criteria were met. PEL does not analyze a low calibration standard at the requested RL for all analytes. The low calibration standard is 270 UG/KG for the following analyte(s): 1,2,4-Trichlorobenzene, 1,2-Dichlorobenzene, 1,3-Dichlorobenzene, 1,4-Dichlorobenzene, 1-Methylnaphthalene, 2,4,5-Trichlorophenol, 2,4,6-Trichlorophenol, 2,4-Dichlorophenol, 2,4-Dimethylphenol, 2,4-Dinitrotoluene, 2-Chlorophenol, 2-Methylnaphthalene, 2-Methylphenol (o-Cresol), 2-Nitroaniline, 4-Bromophenyl-phenylether, 4-Chloro-3-methylphenol, 4-Chloroaniline, 4-Chlorophenyl-phenylether, 4-Methylphenol, 4-Nitroaniline, Acenaphthene, Acenaphthylene, Aniline, Anthracene, Benzo(a)anthracene, Benzo(a)pyrene, Benzo(b)fluoranthene, Benzo(g,h,i)perylene, Benzo(k)fluoranthene, Bis(2-Chloroethoxy)methane, Bis(2-Chloroethyl)ether, Butylbenzylphthalate, Chrysene, Dibenz(a,h)anthracene, Dibenzofuran, Diethylphthalate, Dimethyl-phthalate, Di-n-butylphthalate, Fluoranthene, Fluorene, Hexachlorobenzene, Hexachlorobutadiene, Indeno(1,2,3-cd)pyrene, Isophorone, Naphthalene, Nitrobenzene, N-Nitrosodimethylamine, N-Nitroso-di-n-propylamine, N-Nitrosodiphenylamine, Phenanthrene, Pyrene. The low calibration standard is 670 UG/KG for the following analyte(s): 2,6-Dinitrotoluene, 2-Nitrophenol, 3,3'-Dichlorobenzidine, 3-Nitroaniline, 4-Nitrophenol, bis(2-ethylhexyl)phthalate, Di-n-octylphthalate.

B. Blanks:

All acceptance criteria were met.

C. Surrogates:

All acceptance criteria were met with the exception of:

CASE NARRATIVE

PEL Lab Reference No./SDG: 2507447

Client: T N & Associates, Inc.

The following samples had some surrogates that were diluted out: NPP-T-1 NPP-T-19 NPP-T-19MS NPP-T-2 NPP-T-21 NPP-T-22 NPP-T-23 NPP-T-27 see form 2 for details.

D. Spikes:

1. Laboratory Control Spikes (LCS)

All acceptance criteria were met with the exception of:
LCS 351LCS was analyzed with the soil samples extracted on 08/27/07. The following analyte(s) were recovered below criteria: Benzidine at 0 % with criteria of (10-149), Benzoic acid at 0 % with criteria of (10-106), and the following analyte(s) were recovered above criteria: 1,2-Dichlorobenzene at 99.8 % with criteria of (65-95). The following analyte(s) had marginal exceedance limit failures: 1,3-Dichlorobenzene at 106 % with criteria of (61.5-105.5), 2,4-Dinitrophenol at 0 % with criteria of (12.2-146.8).

Since all other analytes met criteria, no further action was taken.

2. Matrix Spike/Matrix Spike Duplicate Samples (MS/SD)

No spikes requested by client.

E. Internal Standards:

All acceptance criteria were met.

F. Samples:

Sample analysis proceeded normally.
Sample NPP-T-1 required a 1:10 dilution due to the sample's viscosity and matrix interference.

Sample NPP-T-19 required a 1:10 dilution due to the sample's viscosity and matrix interference.

Sample NPP-T-2 required a 1:10 dilution due to the sample's viscosity and matrix interference.

Sample NPP-T-21 required a 1:10 dilution due to the sample's viscosity and matrix interference.
Sample NPP-T-22 required a 1:10 dilution due to the sample's viscosity and matrix interference.

Sample NPP-T-23 required a 1:10 dilution due to the sample's viscosity and matrix interference.

Sample NPP-T-27 required a 1:10 dilution due to the sample's viscosity and matrix interference.

Client: T N & Associates, Inc.

All samples could only be brought to a final volume of 10mL. It was attempted to bring the extract to a final volume of 1mL, however due to the nature of the samples PEL was unable to achieve a lower volume than the 10mL final volume that is reported. The samples also required a 1:10 dilution for analysis due to the sample's viscosity and matrix interference.

I certify that this data package is in compliance with the terms and conditions agreed to by the client and PEL, both technically and for completeness, except for the conditions noted above. Release of the data contained in this hardcopy data package has been authorized by the Laboratory Manager or designated person, as, verified by the following signature.

I. RECEIPT

No exceptions were encountered unless a Sample Receipt Exception Report is attached to the Chain-of-Custody or a communication form is included in the addendum with this package.

II. HOLDING TIMES

A. Sample Preparation: All holding times were met.

B. Sample Analysis: All holding times were met.

III. METHODS

EPA SW846 8082 for Aroclor analysis.

IV. PREPARATION

Soil samples were prepared by SW846 EPA 3550 for 8082 semi-volatile analysis.

V. ANALYSIS

A. Calibration:

All acceptance criteria were met. Please note that CCV539310 (ACCV3.D) did not meet criteria with an average of 17.6 %D. Since this CCV deviated high, it can be assumed that were any target analytes present in the samples, they would be successfully detected.

B. Blanks:

All acceptance criteria were met.

C. Surrogates:

All acceptance criteria were met.

D. Spikes:

PCB 1016 and PCB 1260 were used as the spiking solution for all QC spikes.

1. Laboratory Control Spikes (LCS)

All acceptance criteria were met with the exception of:
LCS 371LCS was analyzed with the soil samples extracted on 08/29/07. The following analyte(s) were recovered above criteria: Aroclor-1260 at 145 % with criteria of (60-125). The following analyte(s) had marginal exceedance limit failures: Aroclor-1260 at 145 % with criteria of (49.2-135.8).

Since the LCS deviated high and no analyte hits were detected in the samples, no further action was taken.

Inorganic Data Qualifiers

C (Concentration) Qualifier - Entries and their meanings are:

B The reported value obtained was less than the RL but greater than or equal to the MDL.

E The reported value obtained was over calibration or linear range.

U The reported value obtained was less than the MDL or was not detected.

Q Qualifier - Entries and their meanings are:

U The reported value is estimated because of interference. An explanatory comment must be included under "Comments" on the Cover Page if the problem applies to all samples in this data package or on the individual FORM 1 if it is an isolated problem.

M Duplicate injection precision was not met (two analyses of the same sample did not agree).

N Spiked sample recovery not within control limits.

E Serial Dilution percent difference not within control limits.

S The reported value was determined by the Method of Standard Additions (MSA).

W Post-digestion spike for Furnace AA analysis is out of control limits (85-115%) while sample absorbance is less than 50% of spike absorbance.

***** Duplicate analysis not within control limits.

+ Correlation coefficient for the MSA is less than 0.995.

X The data is flagged as rejected by analyst utilizing analytical judgement.

Entering "S", "W", or "+" is mutually exclusive. No combination of these qualifiers can apear in the same field.

M (Method) Qualifier - Enter one of the following:

P ICP
A Flame AA
F Furnace AA
CV Manual Cold Vapor AA
TC Total Organic Carbon
AS Semi-Automated Spectrophotometric
CA Midi-Distillation Spectrophotometric
T Titrimetric
C Manual Spectrophotometric
GR Gravimetric

Inorganic Sample ID Qualifiers

The qualifiers that may be appended to the lab sample ID and/or the client sample ID for inorganic analysis are defined below:

DL Diluted reanalysis. Indicates that the results of the original analysis of the sample contained compounds that exceeded the calibration range. The sample was diluted and reanalyzed. May be followed by a digit to indicate multiple dilutions of the sample. The results of more than one diluted reanalysis may be reported.

R Reanalysis. The extract was reanalyzed without re-extraction. The "R" is not used if the sample was also re-extracted. May be followed by a digit to indicate multiple reanalysis of the sample at the same dilution.

RE Re-extracted. The extract was reanalyzed with re-extraction. May be followed by a digit to indicate multiple re-extraction of the same sample at the same dilution.

MS Matrix spike (may be followed by a digit to indicate multiple matrix within a sample set).

SD Matrix spike duplicate (may be followed by a digit to indicate multiple matrix spike duplicate within a sample set).

A Post Digestion Spike.

L Serial Dilution.

Subject: National Petroleum Packers / rush request

Good morning Russell.
Lou has requested that we expedite the following samples: NPP-T1, T2, T21, T22, T23, T27, T19, T4, T5, T7 (last three were received today). I am looking into what kind of TAT I can provide. My ICAP is actin up at the moment and so I'm not sure if I can provide a rush TAT on the metals. I'll get back to you shortly on what we will be able to do for you. If you have any questions, please let me know. Can you please forward to Lou? I thought I had his email but I don't...

Thanks
Darcy

Please note that my extension number has changed to ext. 3.

A. Calibration:

All acceptance criteria were met. PEL does not analyze a low calibration standard at the requested RL for all analytes. The low calibration standard is 270 UG/KG for the following analyte(s): 1,2,4-Trichlorobenzene, 1,2-Dichlorobenzene, 1,3-Dichlorobenzene, 1,4-Dichlorobenzene, 1-Methylnaphthalene, 2,4,5-Trichlorophenol, 2,4,6-Trichlorophenol, 2,4-Dichlorophenol, 2,4-Dimethylphenol, 2,4-Dinitrotoluene, 2-Chlorophenol, 2-Methylnaphthalene, 2-Methylphenol (o-Cresol), 2-Nitroaniline, 4-Bromophenyl-phenylether, 4-Chloro-3-methylphenol, 4-Chloroaniline, 4-Chlorophenyl-phenylether, 4-Methylphenol, 4-Nitroaniline, Acenaphthene, Acenaphthylene, Aniline, Anthracene, Benzo(a)anthracene, Benzo(a)pyrene, Benzo(b)fluoranthene, Benzo(g,h,i)perylene, Benzo(k)fluoranthene, Bis(2-Chloroethoxy) methane, Bis(2-Chloroethyl)ether, Butylbenzylphthalate, Chrysene, Dibenz(a,h)anthracene, Dibenzofuran, Diethylphthalate, Dimethyl-phthalate, Di-n-butylphthalate, Fluoranthene, Fluorene, Hexachlorobenzene, Hexachlorobutadiene, Indeno(1,2,3-cd)pyrene, Isophorone, Naphthalene, Nitrobenzene, N-Nitrosodimethylamine, N-Nitroso-di-n-propylamine, N-Nitrosodiphenylamine, Phenanthrene, Pyrene. The low calibration standard is 670 UG/KG for the following analyte(s): 2,6-Dinitrotoluene, 2-Nitrophenol, 3,3'-Dichlorobenzidine, 3-Nitroaniline, 4-Nitrophenol, bis(2-ethylhexyl)phthalate, Di-n-octylphthalate.

Surrogates:
The following samples had some surrogates that were diluted out: NPP-T-1 NPP-T-19 NPP-T-19MS NPP-T-2 NPP-T-21 NPP-T-22 NPP-T-23 NPP-T-27 see form 2 for details.

1. Laboratory Control Spikes (LCS)

All acceptance criteria were met with the exception of:
LCS 351LCS was analyzed with the soil samples extracted on 08/27/07. The following analyte(s) were recovered below criteria: Benzidine at 0 % with criteria of (10-149), Benzoic acid at 0 % with criteria of (10-106), and the following analyte(s) were recovered above criteria: 1,2-Dichlorobenzene at 99.8 % with criteria of (65-95). The following analyte(s) had marginal exceedance limit failures: 1,3-Dichlorobenzene at 106 % with criteria of (61.5-105.5), 2,4-Dinitrophenol at 0 % with criteria of (12.2-146.8).

All samples could only be brought to a final volume of 10mL. It was attempted to bring the extract to a final volume of 1mL, however due to the nature of the samples PEL was unable to achieve a lower volume than the 10mL final volume that is reported. The samples also required a 1:10 dilution for analysis due to the sample's viscosity and matrix interference.

Organic Data Qualifiers

U Indicates the analyte was analyzed for but not detected. The number adjacent to the "U" qualifier indicates the reporting limit for that analyte. The reporting limit can vary from sample to sample depending on dilution factors or the percent moisture adjustment when indicated.

J Indicates estimated value. It is used when the data indicates the presence of an analyte above the method detection limit (MDL) yet lower than the reporting limit.

B Indicates the analyte was found in the associated blank as well as in the sample. The notation indicates possible contamination of the sample.

E Indicates the value reported is above the highest calibration standard for that analyte. The sample should be analyzed at an appropriate dilution. "E" qualified values are estimations and the diluted result may be reported on another Form 1.

D Indicates the analyte has been identified in a dilution reanalysis. "D" qualifiers are used for samples that have been analyzed at a lesser dilution than required for accurate quantitation.

C The "C" qualifier indicates the presence of this analyte has been confirmed by GC/MS analysis.

P This qualifier is used for pesticide / Aroclor target analytes where there is greater than 25% difference for the detected concentration between the two GC columns.

N This qualifier indicates presumptive evidence of an analyte. This qualifier is only used for tentatively identified compounds (TIC), where the identification is based on a mass spectral library search. It is applied to all TIC results. For generic characterization of a TIC, such as chlorinated hydrocarbon, the "N" qualifier is not used.

A This qualifier indicates that a TIC is a suspected aldol-condensation product.

X Data flagged as rejected by analyst utilizing analytical judgement.

Organic Sample ID Qualifiers

The qualifiers that may be appended to the lab sample ID and/or the client sample ID for organic analysis are defined below:

DL Diluted reanalysis. Indicates that the results of the original analysis of the sample contained compounds that exceeded the calibration range. The sample was diluted and reanalyzed. May be followed by a digit to indicate multiple dilutions of the sample. The results of more than one diluted reanalysis may be reported.

R Reanalysis. The extract was reanalyzed without re-extraction. The "R" is not used if the sample was also re-extracted. May be followed by a digit to indicate multiple reanalysis of the sample at the same dilution.

RE Re-extracted. The extract was reanalyzed with re-extraction. May be followed by a digit to indicate multiple re-extraction of the same sample at the same dilution.

MS Matrix spike (may be followed by a digit to indicate multiple matrix within a sample set).

SD Matrix spike duplicate (may be followed by a digit to indicate multiple matrix spike duplicate within a sample set).

V. ANALYSIS

A. Calibration:

All acceptance criteria were met. Please note that CCV539310 (ACCV3.D) on column STX-CLP1 bid not meet criteria with an average of 17.6 %D. Since this CCV was recovered high it can be assured that were any target analytes present the samples they would have been successfully detected. No further action was taken for this variance.

B. Blanks:

All acceptance criteria were met.

C. Surrogates:

All acceptance criteria were met with the exception of:
Sample NPP D31P1 was recovered above criteria for the following surrogate(s):
Decachlorobiphenyl at 170 % with criteria of (33-140).

Sample NPP D31P2 was recovered above criteria for the following surrogate(s):
Decachlorobiphenyl at 161 % with criteria of (33-140).

Sample NPP D32 was recovered above criteria for the following surrogate(s):
Decachlorobiphenyl at 153 % with criteria of (33-140).

Sample NPP D4 was recovered above criteria for the following surrogate(s):
Decachlorobiphenyl at 191 % with criteria of (33-140).

Since these surrogates were recovered above criteria it can be assured that were any target analytes present in the samples they would have been successfully detected. No further action was taken for these variances.

PEL Lab Reference No./SDG: 2507449

Client: T N & Associates, Inc.

Samples coded accordingly.

D. Spikes:

PCB 1016 and PCB 1260 were used as the spiking solution for all QC spikes.

1. Laboratory Control Spikes (LCS)

All acceptance criteria were met with the exception of:
LCS 372LCS was analyzed with the soil samples extracted on 08/29/07. The following analyte(s) were recovered above criteria: Aroclor-1260 at 148 % with criteria of (60-125). The following analyte(s) had marginal exceedance limit failures: Aroclor-1260 at 148 % with criteria of (49.2-135.8).

Since this LCS exhibited high recovery, it can be assured that were any target analytes present in the samples they would have been successfully detected. No further action was taken for this variance.

Samples coded accordingly.

2. Matrix Spike/Matrix Spike Duplicate Samples (MS/SD)

No spikes requested by client.

E. Internal Standards:

This method does not require the use of internal standards.

F. Samples:

Sample analysis proceeded normally.

Please note that sample NPP D31 exhibited two distinct phases. These two phases were prepared and analyzed separately. The designation *P1* signifies the upper of the two layers. *P2* indicates the lower layer.

Sample NPP D31P1, NPP D32, NPP D33, and NPP D34 required 1:10 dilutions due to matrix interference. Only the diluted run is reported.

I certify that this data package is in compliance with the terms and conditions agreed to by the client and PEL, both technically and for completeness, except for the conditions noted above. Release of the data contained in this hardcopy data package has been authorized by the Laboratory Manager or designated person, as, verified by the following signature.

Inorganic Data Qualifiers

C (Concentration) Qualifier - Entries and their meanings are:

B The reported value obtained was less than the RL but greater than or equal to the MDL.

E The reported value obtained was over calibration or linear range.

U The reported value obtained was less than the MDL or was not detected.

Q Qualifier - Entries and their meanings are:

U The reported value is estimated because of interference. An explanatory comment must be included under "Comments" on the Cover Page if the problem applies to all samples in this data package or on the individual FORM 1 if it is an isolated problem.

M Duplicate injection precision was not met (two analyses of the same sample did not agree).

N Spiked sample recovery not within control limits.

E Serial Dilution percent difference not within control limits.

S The reported value was determined by the Method of Standard Additions (MSA).

W Post-digestion spike for Furnace AA analysis is out of control limits (85-115%) while sample absorbance is less than 50% of spike absorbance.

***** Duplicate analysis not within control limits.

+ Correlation coefficient for the MSA is less than 0.995.

X The data is flagged as rejected by analyst utilizing analytical judgement.

Entering "S", "W", or "+" is mutually exclusive. No combination of these qualifiers can apear in the same field.

M (Method) Qualifier - Enter one of the following:

P ICP
A Flame AA
F Furnace AA
CV Manual Cold Vapor AA
TC Total Organic Carbon
AS Semi-Automated Spectrophotometric
CA Midi-Distillation Spectrophotometric
T Titrimetric
C Manual Spectrophotometric

Inorganic Sample ID Qualifiers

The qualifiers that may be appended to the lab sample ID and/or the client sample ID for inorganic analysis are defined below:

DL Diluted reanalysis. Indicates that the results of the original analysis of the sample contained compounds that exceeded the calibration range. The sample was diluted and reanalyzed. May be followed by a digit to indicate multiple dilutions of the sample. The results of more than one diluted reanalysis may be reported.

R Reanalysis. The extract was reanalyzed without re-extraction. The "R" is not used if the sample was also re-extracted. May be followed by a digit to indicate multiple reanalysis of the sample at the same dilution.

RE Re-extracted. The extract was reanalyzed with re-extraction. May be followed by a digit to indicate multiple re-extraction of the same sample at the same dilution.

MS Matrix spike (may be followed by a digit to indicate multiple matrix within a sample set).

SD Matrix spike duplicate (may be followed by a digit to indicate multiple matrix spike duplicate within a sample set).

A Post Digestion Spike.

L Serial Dilution.

LCS 3352LCS was analyzed with the soil samples extracted on 08/27/07. The following analyte(s) were recovered below criteria: 2,4-Dinitrophenol at 0 % with criteria of (29-130), 2-Methyl-4,6-dinitrophenol at 24.2 % with criteria of (34-135), 3-Nitroaniline at 71.5 % with criteria of (76-110), 4-Nitrophenol at 31 % with criteria of (52-140), Benzidine at 0 % with criteria of (10-149), Benzoic acid at 0 % with criteria of (10-106), Benzyl alcohol at 38.8 % with criteria of (64-125), Di-n-octylphthalate at 51.5 % with criteria of (64-130), Pentachlorophenol at 13.2 % with criteria of (36-120).

The following analyte(s) were recovered above criteria: 1,2-Dichlorobenzene at 103 % with criteria of (65-95), 1,3-Dichlorobenzene at 110 % with criteria of (67-100), 1,4-Dichlorobenzene at 107 % with criteria of (62-105), 2-Methylnaphthalene at 112 % with criteria of (72-105), 4-Chlorophenyl-phenylether at 113 % with criteria of (65-110), Bis(2-Chloroethyl)ether at 107 % with criteria of (61-105), Dibenzofuran at 107 % with criteria of (75-105), Naphthalene at 110 % with criteria of (67-105).

The recoveries are directly related to the final volume adjustment of 10 ml for the LCS to demonstrate recoveries that would be found in the samples.

Samples coded accordingly.

Sample analysis proceeded normally.

Organic Data Qualifiers

U Indicates the analyte was analyzed for but not detected. The number adjacent to the "U" qualifier indicates the reporting limit for that analyte. The reporting limit can vary from sample to sample depending on dilution factors or the percent moisture adjustment when indicated.

J Indicates estimated value. It is used when the data indicates the presence of an analyte above the method detection limit (MDL) yet lower than the reporting limit.

B Indicates the analyte was found in the associated blank as well as in the sample. The notation indicates possible contamination of the sample.

E Indicates the value reported is above the highest calibration standard for that analyte. The sample should be analyzed at an appropriate dilution. "E" qualified values are estimations and the diluted result may be reported on another Form 1.

D Indicates the analyte has been identified in a dilution reanalysis. "D" qualifiers are used for samples that have been analyzed at a lesser dilution than required for accurate quantitation.

C The "C" qualifier indicates the presence of this analyte has been confirmed by GC/MS analysis.

P This qualifier is used for pesticide / Aroclor target analytes where there is greater than 25% difference for the detected concentration between the two GC columns.

N This qualifier indicates presumptive evidence of an analyte. This qualifier is only used for tentatively identified compounds (TIC), where the identification is based on a mass spectral library search. It is applied to all TIC results. For generic characterization of a TIC, such as chlorinated hydrocarbon, the "N" qualifier is not used.

A This qualifier indicates that a TIC is a suspected aldol-condensation product.

X Data flagged as rejected by analyst utilizing analytical judgement.

Organic Sample ID Qualifiers

The qualifiers that may be appended to the lab sample ID and/or the client sample ID for organic analysis are defined below:

DL Diluted reanalysis. Indicates that the results of the original analysis of the sample contained compounds that exceeded the calibration range. The sample was diluted and reanalyzed. May be followed by a digit to indicate multiple dilutions of the sample. The results of more than one diluted reanalysis may be reported.

R Reanalysis. The extract was reanalyzed without re-extraction. The "R" is not used if the sample was also re-extracted. May be followed by a digit to indicate multiple reanalysis of the sample at the same dilution.

RE Re-extracted. The extract was reanalyzed with re-extraction. May be followed by a digit to indicate multiple re-extraction of the same sample at the same dilution.

MS Matrix spike (may be followed by a digit to indicate multiple matrix within a sample set).

SD Matrix spike duplicate (may be followed by a digit to indicate multiple matrix spike duplicate within a sample set).

CASE NARRATIVE
POLYCHLORINATED BIPHENYLS (PCB) SEMIVOLATILE ORGANIC

PEL Lab Reference No./SDG: 2507451

Client: T N & Associates, Inc.

I. RECEIPT

No exceptions were encountered unless a Sample Receipt Exception Report is attached to the Chain-of-Custody or a communication form is included in the addendum with this package.

II. HOLDING TIMES

A. Sample Preparation: All holding times were met.

B. Sample Analysis: All holding times were met.

III. METHODS

EPA SW846 8082 for Aroclor analysis.

IV. PREPARATION

Soil samples were prepared by SW846 EPA 3550 for 8082 semi-volatile analysis.

V. ANALYSIS

A. Calibration:

All acceptance criteria were met.

B. Blanks:

All acceptance criteria were met.

C. Surrogates:

All acceptance criteria were met with the exception of:
Sample NPP D123 was recovered above criteria for the following surrogate(s): Decachlorobiphenyl at 165 % with criteria of (33-140). Since this surrogate was recovered high and all other surrogates met all acceptance criteria, no further action was taken.

Please note that sample NPP D26 (250745114) appears to have been surrogated twice by mistake. This additional surrogation was taken into account when the percent recovery was calculated.

Samples coded accordingly.

D. Spikes:

PCB 1016 and PCB 1260 were used as the spiking solution for all QC spikes.

1. Laboratory Control Spikes (LCS)

All acceptance criteria were met

PEL Lab Reference No./SDG: 2507451

Client: T N & Associates, Inc.

2. Matrix Spike/Matrix Spike Duplicate Samples (MS/SD)

No spikes requested by client.

E. Internal Standards:

This method does not require the use of internal standards.

F. Samples:

Sample analysis proceeded normally.

I certify that this data package is in compliance with the terms and conditions agreed to by the client and PEL, both technically and for completeness, except for the conditions noted above. Release of the data contained in this hardcopy data package has been authorized by the Laboratory Manager or designated person, as, verified by the following signature.

Inorganic Data Qualifiers

C (Concentration) Qualifier - Entries and their meanings are:

B The reported value obtained was less than the RL but greater than or equal to the MDL.

E The reported value obtained was over calibration or linear range.

U The reported value obtained was less than the MDL or was not detected.

Q Qualifier - Entries and their meanings are:

U The reported value is estimated because of interference. An explanatory comment must be included under "Comments" on the Cover Page if the problem applies to all samples in this data package or on the individual FORM 1 if it is an isolated problem.

M Duplicate injection precision was not met (two analyses of the same sample did not agree).

N Spiked sample recovery not within control limits.

E Serial Dilution percent difference not within control limits.

S The reported value was determined by the Method of Standard Additions (MSA).

W Post-digestion spike for Furnace AA analysis is out of control limits (85-115%) while sample absorbance is less than 50% of spike absorbance.

***** Duplicate analysis not within control limits.

+ Correlation coefficient for the MSA is less than 0.995.

X The data is flagged as rejected by analyst utilizing analytical judgement.

Entering "S", "W", or "+" is mutually exclusive. No combination of these qualifiers can apear in the same field.

M (Method) Qualifier - Enter one of the following:

P ICP
A Flame AA
F Furnace AA
CV Manual Cold Vapor AA
TC Total Organic Carbon
AS Semi-Automated Spectrophotometric
CA Midi-Distillation Spectrophotometric
T Titrimetric
C Manual Spectrophotometric
GR Gravimetric
NR Analyte was not required by your lab

Inorganic Sample ID Qualifiers

The qualifiers that may be appended to the lab sample ID and/or the client sample ID for inorganic analysis are defined below:

DL Diluted reanalysis. Indicates that the results of the original analysis of the sample contained compounds that exceeded the calibration range. The sample was diluted and reanalyzed. May be followed by a digit to indicate multiple dilutions of the sample. The results of more than one diluted reanalysis may be reported.

R Reanalysis. The extract was reanalyzed without re-extraction. The "R" is not used if the sample was also re-extracted. May be followed by a digit to indicate multiple reanalysis of the sample at the same dilution.

RE Re-extracted. The extract was reanalyzed with re-extraction. May be followed by a digit to indicate multiple re-extraction of the same sample at the same dilution.

MS Matrix spike (may be followed by a digit to indicate multiple matrix within a sample set).

SD Matrix spike duplicate (may be followed by a digit to indicate multiple matrix spike duplicate within a sample set).

A Post Digestion Spike.

L Serial Dilution.

Please notify the project chemist of the following:

Sample NPP D22 required an additional 1:100 dilution due to a high concentration of Toluene. Both diluted runs will be reported.

I must not fear. Fear is the mind-killer. Fear is the little-death that brings total obliteration. I will face my fear. I will permit it to pass over me and through me. And when it has gone past I will turn the inner eye to see its path. Where the fear has gone there will be nothing. Only I will remain.

A. Surrogates:

All acceptance criteria were met with the exception of:
Sample NPP D123 was recovered above criteria for the following surrogate(s): Decachlorobiphenyl at 165 % with criteria of (33-140). Since this surrogate was recovered high and all other surrogates met all acceptance criteria, no further action was taken.

Please note that sample NPP D26 (250745114) appears to have been surrogated twice by mistake. This additional surrogation was taken into account when the percent recovery was calculated.

Organic Data Qualifiers

U Indicates the analyte was analyzed for but not detected. The number adjacent to the "U" qualifier indicates the reporting limit for that analyte. The reporting limit can vary from sample to sample depending on dilution factors or the percent moisture adjustment when indicated.

J Indicates estimated value. It is used when the data indicates the presence of an analyte above the method detection limit (MDL) yet lower than the reporting limit.

B Indicates the analyte was found in the associated blank as well as in the sample. The notation indicates possible contamination of the sample.

E Indicates the value reported is above the highest calibration standard for that analyte. The sample should be analyzed at an appropriate dilution. "E" qualified values are estimations and the diluted result may be reported on another Form 1.

D Indicates the analyte has been identified in a dilution reanalysis. "D" qualifiers are used for samples that have been analyzed at a lesser dilution than required for accurate quantitation.

C The "C" qualifier indicates the presence of this analyte has been confirmed by GC/MS analysis.

P This qualifier is used for pesticide / Aroclor target analytes where there is greater than 25% difference for the detected concentration between the two GC columns.

N This qualifier indicates presumptive evidence of an analyte. This qualifier is only used for tentatively identified compounds (TIC), where the identification is based on a mass spectral library search. It is applied to all TIC results. For generic characterization of a TIC, such as chlorinated hydrocarbon, the "N" qualifier is not used.

A This qualifier indicates that a TIC is a suspected aldol-condensation product.

X Data flagged as rejected by analyst utilizing analytical judgement.

Organic Sample ID Qualifiers

The qualifiers that may be appended to the lab sample ID and/or the client sample ID for organic analysis are defined below:

DL Diluted reanalysis. Indicates that the results of the original analysis of the sample contained compounds that exceeded the calibration range. The sample was diluted and reanalyzed. May be followed by a digit to indicate multiple dilutions of the sample. The results of more than one diluted reanalysis may be reported.

R Reanalysis. The extract was reanalyzed without re-extraction. The "R" is not used if the sample was also re-extracted. May be followed by a digit to indicate multiple reanalysis of the sample at the same dilution.

RE Re-extracted. The extract was reanalyzed with re-extraction. May be followed by a digit to indicate multiple re-extraction of the same sample at the same dilution.

MS Matrix spike (may be followed by a digit to indicate multiple matrix within a sample set).

SD Matrix spike duplicate (may be followed by a digit to indicate multiple matrix spike duplicate within a sample set).

I. RECEIPT

No exceptions were encountered unless a Sample Receipt Exception Report is attached to the Chain-of-Custody or a communication form is included in the addendum with this package.

II. HOLDING TIMES

A. Sample Preparation: All holding times were met.

B. Sample Analysis: All holding times were met.

III. METHODS

EPA 8260B/SW846

IV. PREPARATION

Soil samples were prepared by SW846/5035 for EPA8260B volatiles analysis. All aspects of sample preparation proceeded without exception.

V. ANALYSIS

A. Calibration:

All acceptance criteria were met.

B. Blanks:

All acceptance criteria were met.

C. Surrogates:

All acceptance criteria were met.

D. Spikes:

1. Laboratory Control Spikes (LCS)

All acceptance criteria were met with the exception of:

LCS 083007LCS12 was analyzed with the soil samples on 08/30/07. The following analyte was recovered below criteria: Acrolein at 63 % with criteria of (69-130).

LCS 083007LCS12D was analyzed with the soil samples on 08/30/07. The following analyte was recovered below criteria: Acrolein at 67.5 % with criteria of (69-130). The following analyte was recovered above criteria: Acetone at 141 % with criteria of (58-133).

No further action was required. Samples coded accordingly.

PEL Lab Reference No./SDG: 2507461

Client: T N & Associates, Inc.

2. Matrix Spike/Matrix Spike Duplicate Samples (MS/SD)

No spikes requested by client.

E. Internal Standards:

All acceptance criteria were met.

F. Samples:

Sample analysis proceeded normally. Client specified reporting limits were used.

Samples NPP-SS-02 and NPP-SS-10 required a high level extraction and analysis due to ISTD excursions in both low level PW vial runs, which resulted in the inability to quantitate the data. Only high level analyses are reported for these samples.

Sample NPP-SS-03 required a 1:50 dilution due to a high concentration of Acetone. Both low and high level runs are reported.

I certify that this data package is in compliance with the terms and conditions agreed to by the client and PEL, both technically and for completeness, except for the conditions noted above. Release of the data contained in this hardcopy data package has been authorized by the Laboratory Manager or designated person, as, verified by the following signature.

Inorganic Data Qualifiers

C (Concentration) Qualifier - Entries and their meanings are:

B The reported value obtained was less than the RL but greater than or equal to the MDL.

E The reported value obtained was over calibration or linear range.

U The reported value obtained was less than the MDL or was not detected.

Q Qualifier - Entries and their meanings are:

U The reported value is estimated because of interference. An explanatory comment must be included under "Comments" on the Cover Page if the problem applies to all samples in this data package or on the individual FORM 1 if it is an isolated problem.

M Duplicate injection precision was not met (two analyses of the same sample did not agree).

N Spiked sample recovery not within control limits.

E Serial Dilution percent difference not within control limits.

S The reported value was determined by the Method of Standard Additions (MSA).

W Post-digestion spike for Furnace AA analysis is out of control limits (85-115%) while sample absorbance is less than 50% of spike absorbance.

***** Duplicate analysis not within control limits.

+ Correlation coefficient for the MSA is less than 0.995.

X The data is flagged as rejected by analyst utilizing analytical judgement.

Entering "S", "W", or "+" is mutually exclusive. No combination of these qualifiers can apear in the same field.

M (Method) Qualifier - Enter one of the following:

P ICP
A Flame AA
F Furnace AA
CV Manual Cold Vapor AA
TC Total Organic Carbon
AS Semi-Automated Spectrophotometric
CA Midi-Distillation Spectrophotometric
T Titrimetric
C Manual Spectrophotometric
GR Gravimetric

Inorganic Sample ID Qualifiers

The qualifiers that may be appended to the lab sample ID and/or the client sample ID for inorganic analysis are defined below:

DL Diluted reanalysis. Indicates that the results of the original analysis of the sample contained compounds that exceeded the calibration range. The sample was diluted and reanalyzed. May be followed by a digit to indicate multiple dilutions of the sample. The results of more than one diluted reanalysis may be reported.

R Reanalysis. The extract was reanalyzed without re-extraction. The "R" is not used if the sample was also re-extracted. May be followed by a digit to indicate multiple reanalysis of the sample at the same dilution.

RE Re-extracted. The extract was reanalyzed with re-extraction. May be followed by a digit to indicate multiple re-extraction of the same sample at the same dilution.

MS Matrix spike (may be followed by a digit to indicate multiple matrix within a sample set).

SD Matrix spike duplicate (may be followed by a digit to indicate multiple matrix spike duplicate within a sample set).

A Post Digestion Spike.

L Serial Dilution.

Please notify the project chemist of the following:

Samples NPP-SS-02 and NPP-SS-10 both had ISTD failures for both PW vial runs. No data could be quantitated for either low level analysis. These samples were analyzed as high level extractions and will be reported as such.

Sample NPP-SS-03 required a high level extraction and analysis do to a high concentration of Acetone. Both low and high level analyses will be reported.

Organic Data Qualifiers

U Indicates the analyte was analyzed for but not detected. The number adjacent to the "U" qualifier indicates the reporting limit for that analyte. The reporting limit can vary from sample to sample depending on dilution factors or the percent moisture adjustment when indicated.

J Indicates estimated value. It is used when the data indicates the presence of an analyte above the method detection limit (MDL) yet lower than the reporting limit.

B Indicates the analyte was found in the associated blank as well as in the sample. The notation indicates possible contamination of the sample.

E Indicates the value reported is above the highest calibration standard for that analyte. The sample should be analyzed at an appropriate dilution. "E" qualified values are estimations and the diluted result may be reported on another Form 1.

D Indicates the analyte has been identified in a dilution reanalysis. "D" qualifiers are used for samples that have been analyzed at a lesser dilution than required for accurate quantitation.

C The "C" qualifier indicates the presence of this analyte has been confirmed by GC/MS analysis.

P This qualifier is used for pesticide / Aroclor target analytes where there is greater than 25% difference for the detected concentration between the two GC columns.

N This qualifier indicates presumptive evidence of an analyte. This qualifier is only used for tentatively identified compounds (TIC), where the identification is based on a mass spectral library search. It is applied to all TIC results. For generic characterization of a TIC, such as chlorinated hydrocarbon, the "N" qualifier is not used.

A This qualifier indicates that a TIC is a suspected aldol-condensation product.

X Data flagged as rejected by analyst utilizing analytical judgement.

Organic Sample ID Qualifiers

The qualifiers that may be appended to the lab sample ID and/or the client sample ID for organic analysis are defined below:

DL Diluted reanalysis. Indicates that the results of the original analysis of the sample contained compounds that exceeded the calibration range. The sample was diluted and reanalyzed. May be followed by a digit to indicate multiple dilutions of the sample. The results of more than one diluted reanalysis may be reported.

R Reanalysis. The extract was reanalyzed without re-extraction. The "R" is not used if the sample was also re-extracted. May be followed by a digit to indicate multiple reanalysis of the sample at the same dilution.

RE Re-extracted. The extract was reanalyzed with re-extraction. May be followed by a digit to indicate multiple re-extraction of the same sample at the same dilution.

MS Matrix spike (may be followed by a digit to indicate multiple matrix within a sample set).

SD Matrix spike duplicate (may be followed by a digit to indicate multiple matrix spike duplicate within a sample set).

I. RECEIPT

No exceptions were encountered unless a Sample Receipt Exception Report is attached to the Chain-of-Custody or a communication form is included in the addendum with this package.

II. HOLDING TIMES

A. Sample Preparation: All holding times were met.

B. Sample Analysis: All holding times were met.

III. METHODS

EPA 8260B/SW846

IV. PREPARATION

Soil samples were prepared by SW846/5035 for EPA8260B volatiles analysis. All aspects of sample preparation proceeded without exception.

V. ANALYSIS

A. Calibration:

All acceptance criteria were met.

B. Blanks:

All acceptance criteria were met.

C. Surrogates:

All acceptance criteria were met with the exception of:

Sample NPPD183 was recovered below criteria for the following surrogate(s): 1,2-Dichloroethane-d4 at 0 % with criteria of (71-124), 4-Bromofluorobenzene at 0 % with criteria of (54-126), Dibromofluoromethane at 0 % with criteria of (68-119), Toluene d8 at 0 % with criteria of (59-127). No further action was taken. All of the surrogates were diluted out due to the high dilution required, which was based on the screening process.

Sample NPPD248 was recovered above criteria for the following surrogate(s): 4-Bromofluorobenzene at 202 % with criteria of (54-126). No further action was taken, since the three other surrogates met acceptance criteria.

Sample NPPD248DL1 was recovered below criteria for the following surrogate(s): 1,2-Dichloroethane-d4 at 0 % with criteria of (71-124), 4-Bromofluorobenzene at 0 % with criteria of (54-126), Dibromofluoromethane at 0 % with criteria of (68-119), Toluene d8 at 0 % with criteria of (59-127). No further action was taken. All of the surrogates were diluted out due to the high dilution required.

PEL Lab Reference No./SDG: 2507462

Client: T N & Associates, Inc.

Samples coded accordingly.

D. Spikes:

1. Laboratory Control Spikes (LCS)

All acceptance criteria were met with the exception of:

LCS 090607LCSA34 was analyzed with the soil samples on 09/06/07. The following analyte was recovered below criteria: 2,2-Dichloropropane at 68.5 % with criteria of (70-130).

LCS 090707LCSA32 was analyzed with the soil samples on 09/07/07. The following analyte was recovered above criteria: 2,2-Dichloropropane at 131 % with criteria of (70-130).

No further action was required. Samples coded accordingly.

2. Matrix Spike/Matrix Spike Duplicate Samples (MS/SD)

No spikes requested by client.

E. Internal Standards:

All acceptance criteria were met.

F. Samples:

Sample analysis proceeded normally. Client specified reporting limits were used.

All waste samples were analyzed high level.

Sample NPPD183 required a 1:5000 dilution due to extreme foaming upon the purging process. There were no quantitated findings and all the surrogates were diluted out due to the high dilution required.

Sample NPPD247 required an additional 1:500 dilution due to a high concentration of Naphthalene. Both diluted runs are reported.

Sample NPPD248 required a 1:500 and a 1:20000 dilution due to a high concentration of Naphthalene based on the screening process. These are the only dilutions analyzed and reported.
