**Subject:** **Final Emergency Response Letter Report**  
**Biological Processors of Alabama**  
**Decatur, Morgan County, Alabama**  
**EPA Contract No. EP-W-05-054**  
**TDD No. TTEMI-05-001-0087**

Dear Mr. Spurlin:

The Tetra Tech EM Inc. (Tetra Tech) Superfund Technical Assessment and Response Team (START) is submitting this letter report summarizing emergency response activities that were conducted at the Biological Processors of Alabama, Inc. (BPA) site in Decatur, Alabama on January 22 and 23, 2009 (see Figure 1). Tetra Tech START was tasked to prepare a site-specific health and safety plan; conduct multimedia sampling and air monitoring; provide written and photographic documentation of response activities; prepare geographical information system (GIS) figures, as necessary; and prepare draft and final letter reports summarizing response activities. Appendix A provides figures illustrating the site location and layout. Appendix B contains tables that summarize the containers identified at the site during response activities as well as analytical results for samples collected. Appendix C provides a photographic log of response activities. Appendix D contains a copy of the Tetra Tech START logbook notes. Appendix E is a copy of the chain of custody form for waste samples that were collected during response activities. Appendix F is a table of witnesses for personnel involved in response activities. Attachment 1 provides a copy of the analytical data package for samples collected. Attachment 1 provides a copy of the laboratory analytical data package for samples collected during response activities.

### **Background**

According to Chris Odinet, a representative of BPA, the facility was originally constructed in August 2004 and operations began later that same year to treat wastewater from various clients. In 2006, additional construction was performed at the facility to upgrade the process design. According to Mr. Odinet, operations at the BPA site ceased in May 2007 after an unsuccessful attempt to sell the facility. Mr. Odinet also stated that the treatment system was fouled because of wastewater containing acrylonitrile that was received from a customer. According to ADEM, the facility experienced difficulties in treating wastes adequate to the POTW requirements.

Wastewater was typically transported to the BPA site in tanker trucks, totes, and drums. Based on discussions with Mr. Odinet, key features and tanks associated with the treatment process at the BPA facility are illustrated in Figures 2 and 3 of Appendix A and are described as follows:

- Solidification Pit: Wastewater brought to the facility was initially emptied into the solidification pit to allow solids to settle. Settled materials were periodically solidified using material received from an outside source, removed from the pit, and placed into rolloff containers for offsite disposal.
- Influent Tanks: Seven tanks, which are located within a concrete-bermed containment area, were used to store wastewater pumped from the solidification pit. These tanks are identified as Oily Water No. 1 through 3, Non-Oily Water No. 4, and Special Waste 5 through 7. The Special Waste tanks were reportedly used to store wastes such as latex-containing wastewater.
- Oil-Water Separators: The facility used both a heavy oil separator, which is located within the same containment area as the influent tanks, and two fine oil separators to remove oil from the wastewater prior to treatment.
- Equalization Tank: This tank was used to store and stabilize wastewater prior to pumping it into the building to begin the chemical treatment process.
- Microbial Treatment Tanks: Two tanks were used to further treat wastewater using microbial agents. These tanks are identified as PIH-100 and PIH-200.
- Process Building: The chemical treatment process, which occurred inside the building, utilized various methods and equipment to remove contaminants from the wastewater, including dissolved air floatation, a lamella clarifier, sludge thickeners, ferric chloride, a filter press, and sand filters.
- Effluent Tanks: Three tanks were used at the BPA site to store treated wastewater prior to being discharged to the local publicly-owned treatment works (POTW). These tanks are identified as TWT-1 through 3.

### **Emergency Response Activities**

Tetra Tech START arrived at the site on the morning of January 22, 2009 and met with OSC Steve Spurlin and representatives from CMC, Inc. (CMC), the EPA's Emergency and Rapid Response Services contractor. Tetra Tech START and CMC conducted an inventory of containers at the site, including the large aboveground storage tanks (AST) associated with the wastewater treatment operations as well as frac tanks, tanker trucks, and drums. The following list provides a brief summary of containers identified at the site.

- 33 ASTs: These ASTs, which are summarized in Table 1 of Appendix B, contain an estimated volume of 353,150 gallons of liquids and sludges. Volumes for tanks that were not accessed during response activities were assumed to be 100-percent full.
- 38 frac tanks: These frac tanks, which are summarized in Table 2 of Appendix B, contain an estimated volume of 630,000 gallons of liquids and sludges. Five of the frac tanks were empty during the initial inventory activities, but two were filled during liquid transfer operations discussed later in this report.
- 5 tanker trucks: Four of these tanker trucks, which are summarized in Table 3 of Appendix B, were empty while the fifth tanker truck (T-255) contained an estimated volume of 3,000 gallons of liquids. Four of the tanker trucks were moved from their original locations on January 23, 2009 by the owner, Acadian Alliance.
- 56 plastic totes: These totes, which are summarized in Table 4 of Appendix B, contain an estimated volume of 9,281 gallons of liquids and sludges. Three of the totes were empty. Volumes for totes that were not accessed during response activities were assumed to be 100-percent full. Label information indicated the presence of ferric chloride, sodium hydroxide, and other corrosive materials. Most of the totes are located in the Truck Wash Area in the western

end of the Process Building and in the white trailer staged along the northern fence line, while others are scattered in various areas of the site.

- 186 drums: These drums, which are summarized in Table 5 of Appendix B, contain an estimated volume of 6,442 gallons of liquids and sludges. Forty-one of the drums were empty. Volumes for drums that were not accessed during response activities were assumed to be 100-percent full. Label information indicated the presence of sodium hydroxide, phosphoric acid, and other corrosive materials. Most of the drums are located in the Truck Wash Area in the western end of the Process Building while others are scattered in various areas of the site.
- 23 gas cylinders: Label information for these cylinders, which are summarized in Table 6 of Appendix B, indicated the presence of oxygen, acetylene, helium, argon, and compressed air. The cylinders are located in and around the Process Building.
- 3 rolloff containers: These rolloff containers, which are summarized in Table 7 of Appendix B, contain an estimated volume of 60 cubic yards of sludge and trash. The rolloff containers are located adjacent to the Solidification Pit.
- 208 cubic-yard sacks: These cubic-yard sacks, which are summarized in Table 7 of Appendix B, contain an estimated volume of 208 cubic yards of solids. According to Mr. Odinet, the contents of these cubic-yard sacks were used to solify sludges that were periodically removed from the solidification pit. Most of the cubic-yard sacks are located in the northwestern and southwestern portions of the site.
- 141 miscellaneous small containers: These small containers, which are summarized in Table 7 of Appendix B, contain an estimated volume of 508 gallons of material. Most of the small containers are located in the storage trailer staged in the southeastern portion of the site.
- In addition, approximately 50 to 100 small containers were present in the lab area inside the process building. These containers were not specifically inventoried, but included typical lab reagents and other chemicals such as acids.

Figure 2 of Appendix A illustrates the site layout and provides additional detail regarding the locations of containers identified at the site.

Based on air monitoring results and observations made during the inventory activities along with available knowledge of wastes present at the site, OSC Spurlin directed Tetra Tech START to collect samples from various containers. The following samples were collected and transferred via chain of custody to CMC, who delivered the samples to Test America, Inc. in Nashville, Tennessee for laboratory analyses as summarized below:

- PIT: Sludge waste sample collected from the Solidification Pit and analyzed for volatile organic compounds (VOC), semivolatile organic compounds (SVOC), Toxicity Characteristic Leaching Procedure (TCLP) metals, TCLP VOCs, and TCLP SVOCs.
- T-255: Liquid waste sample collected from a tanker truck with the same identification number and analyzed for VOCs, SVOCs, TCLP metals, and ignitability.
- G207SD: Liquid waste sample collected from a frac tank with the same identification number and analyzed for VOCs, SVOCs, TCLP metals, and ignitability.
- FM610-L: Liquid waste sample collected from a frac tank with the same identification number and analyzed for VOCs, SVOCs, TCLP metals, and ignitability.
- FM610-S: Sludge waste sample collected from a frac tank with the same identification number and analyzed for VOCs, SVOCs, and Resource Conservation and Recovery Act (RCRA) metals.
- MT21-L: Liquid waste sample collected from a frac tank with the same identification number and analyzed for VOCs, SVOCs, TCLP metals, and ignitability.

- MT21-S: Sludge waste sample collected from a frac tank with the same identification number and analyzed for VOCs, SVOCs, and Resource Conservation and Recovery Act (RCRA) metals.
- FM771: Liquid waste sample collected from a frac tank with the same identification number and analyzed for VOCs, SVOCs, TCLP metals, and ignitability.
- D03: Liquid waste sample collected from a drum and analyzed for pH.
- D04: Liquid waste sample collected from a drum and analyzed for pH.
- D06: Liquid waste sample collected from a drum and analyzed for pH.
- D07: Liquid waste sample collected from a drum and analyzed for pH.

Tables 8 through 10 of Appendix B provide a summary of the analytical results obtained for these samples. Analytical data indicate the presence of numerous VOCs and SVOCs in the liquid and sludge samples collected from the frac tanks, including benzene, toluene, ethylbenzene, xylenes, styrene tetrachloroethene, trichloroethene, and phenol. In addition, TCLP metals analyses for liquid samples collected from the tanker truck and some of the frac tanks indicate the presence of chromium, lead, and selenium at concentrations that exceed the respective regulatory limit under the Resource Conservation and Recovery Act. Analytical results for the drum samples indicate pH values that confirm the presence of corrosive liquids at the site.

To stabilize conditions at the site, OSC Spurlin coordinated with BPA representatives, who utilized Birmingham Industrial to transfer liquids from the solidification pit because it was at capacity. In addition, OSC Spurlin directed CMC to transfer some of the contents of two influent tanks, which were at or very near capacity. Birmingham Industrial and CMC utilized empty frac tanks at the site to transfer sufficient quantities of liquid from the following locations to provide additional capacity for potential rain pending decisions regarding more extensive removal actions:

- Solidification Pit: Birmingham Industrial representatives transferred the contents of the Solidification Pit into frac tanks FM616 and FM1065.
- Non-Oily Water No. 4: CMC transferred liquid from this tank into frac tanks FM616 and FM1065.
- Oily Water No. 3: CMC transferred liquid from this tank into Non-Oily Water No. 4 after some of its contents were transferred into frac tanks.

In addition, CMC procured a fence contractor to install a secure gate at the northwest corner of the BPA facility, where access to the site was previously unrestricted. EPA, CMC, and Tetra Tech START demobilized from the BPA site on January 23, 2009.

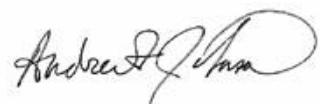

Mr. S. Spurlin

**Date:** January 22, 2009

**Photographer:** Brian Croft, Tetra Tech START

**Witness:** Quinn Kelley, Tetra Tech START

**Subject:** The Solidification Pit that was used by BPA to allow solids to settle from wastewater prior to being pumped to the Influent Tanks. This photograph shows the pit at full capacity. According to BPA, solids from the pit were periodically solidified using material that was obtained from an outside supplier and stored at the BPA facility in cubic-yard sacks. Solidified materials were then placed in rolloff containers for offsite disposal.

**TETRA TECH EM INC**

**OFFICIAL PHOTOGRAPH NO. 4**  
**U.S. ENVIRONMENTAL PROTECTION AGENCY**

**TDD Number:** TTEMI-05-001-0087

<sup>2</sup>  
1/22/09 BPA Quinn Kelley

0730 FET<sup>(w)</sup> START Brian Croft & Quinn Kelley arrive on site.  
START Kyle Russell arrives on site.

0745 START Russell begins to calibrate instruments. OSC Steve Spurin & CMC are also onsite. ADEM Bruce Freeman is also on site.

0830 START /CMC begin inventorying containers beginning w/ frac tanks - using PVC pipe to stick each to determine depth & sludge

1140 LUNCH

1215 START /CMC continue inventory of containers: frac tanks (36) complete - now working on tanker trucks and totes/drums/etc.

1235 BPA rep Chris Odinet onsite to meet w/ OSC  
↳ (985) 960-0159

- START /CMC /OSC tour site w/ BPA rep Odinet for process description / container identification

- general flow of process:

solidification pit (tanks emptied here to allow solids to settle, which are later solidified) → pumped to influent tanks → pumped to oil-water separator (2) →

BSC 1-22-09

<sup>3</sup>  
1-22-09 BPA R. Craft

⇒ pumped to equalization tank ⇒ pumped into building ⇒ DAF unit (dissolved air floater) - which is used to further separate finer oil which are skimmed ⇒ DT tank ⇒ into 3 white poly tanks ⇒ lamella clarifier ⇒ sludge thickener (lime added) ⇒ filter press ⇒ filters ⇒ effluent tanks ⇒ discharge to POTW offsite

- general history:

- facility constructed in ~ August 2004
- began operations late 2004
- revisions made 2006 to add influent tanks to process - soil dumped behind back fence
- were apparently trying to sell facility to a company from Arizona, but sale failed
- shut down in May 2007
- Accela Alliance is a separate entity - not affiliated w/ facility owners according to Mr. Odinet
- Safety Kleen is a significant customer
- Mr. Odinet says that a client fouled their system w/ acrylonitrile-laden wastes, but claimed it was ammonia-laden
- Birmingham Industrial reps to be onsite first thing in morning to pump out the pit/ sump @ back end of site

BSC 1-22-09

1-22-09

BPA

B. Craft

## (general) process areas:

pit - newest one built at back end of site using 1/2 steel tank - catches water emptied from tanks to allow solids to settle, which are later solidified/reduced

- installed early 2007 - facility pumped directly from tanks to influent tanks prior, but solids fouled system too often

- sludge is solidified & put into roll-off boxes

oil tank - blue tank <sup>elevated</sup> situated on supports adjacent to influent tanks - used to separate heavy oils which are recycled or sold

old solidification pit - located under cover @ back end of building

metals processing - inside building

3 tall white tanks = effluent tanks

PIH 100 & PIH 200 = bio tanks inside lower containment area - used for microbial treatment

Special waste tanks - used to treat non-oil wastewater, such as latex wastes (used batch processing generally for these wastes)

Supersacks - Mr. Odmet said it was mostly materials used for solidification in pit - it came from suppliers w/ date & time written on it

BSC 1-22-09

1-22-09

BPA

R. Craft

## 1500 inventory activities finished

ADEM/START/CMC/OSC meet to discuss activities to be conducted & samples to be collected, etc.

- oily water #3 - 1-inch freeboard - pump down

- non-oily water #4 - 2-3 inches freeboard - pump down

- other 2 influent tanks - ~6 inches freeboard

- solidification pit - 0" freeboard - pump down

- ADEM observed holes/leakage from containment area surrounding influent tanks

## SAMPLES:

frac tanks; Fm 610 ( $H_2S$  hit)

Fm 771 (blue top/sludge)

MT 21 (sting odor)

SG 207

} sample  
liquid &  
sludge  
layers

tanker truck: T 255 - liquid sample only

solidification pit: sludge - sludge sample only

roll-off w/ pit sludge: sludge - sludge sample only

drums: 2-3 to be identified w/ OSC

- check special waste tanks (blue vertical) < effluent tanks

- MT fractanks currently: Fm 632, Fm 1065, Fm 1066

1600 CMC checking levels in effluent tanks

TWT 1 - approx 3/4 full (2 rib lines from top)

TWT 2 - appears to be empty

3<sup>rd</sup> tank - approx 3/4 full (2 rib lines from top)  
(TWT-3)

BSC 1-22-09

6

1-22-09

BPA

B. Craft

1630 OSC / start investigating drums/totes in storage area (truck wash area) for sampling  
 - targeted approx. 6 drums to open & collect pH samples - some to be shipped to lab

1700 Bruce Cole - Great American Engineering, a local consultant, stopped @ site to speak w/ OSC - said that "he knew someone who knew someone" at Dow who said they would be willing to discuss potential redevelopment at the site.

1720 START working on container inventory to total & summarize containers & enter data into Excel spreadsheet:

36 truck tanks (3 empty)

5 tanker trucks

~ 185 drums

~ 50 totes

small containers (lab)

1820 START offsite

BSC 1-22-09

7

1-23-09

BPA

B. Craft

0630 SMART / OSC / come onsite safety / ops mtg.  
 - set up to pump down influent tanks  
 - Sample frac tanks  
 - sample drums

0705 Smart / come begin sampling frac tanks & one tower tank

#### 0720 SC SAMPLE COLLECTED DESCRIPTIONS

0720 FM771<sup>L</sup> - brown frac tank (Kyle)  
 - blue liquid - insufficient sludge qty.

0730 FM610<sup>L</sup> - brown frack tank - liquid (Brian)

0735 FM610-S - " " - sludge (Brian)

0755 ~~FM~~ 2075D-L - frac tank - liquid (Kyle)  
 - oil/water - insufficient qty for sludge sample

0800 MT21<sup>L</sup> - brown frac tank - liquid (Brian)

0805 MT21-S - " " - Sludge (Brian)

0825 T255-L bronze tanker truck - liquid (Brian)

note: CMC inspected blue vertical ATCs (spotted) Special waste 7 - brown oily liquid level 5 ft from top - no sludge

Special waste 6 - green/aqua/blue liquid level 8 ft from top - no sludge

Special waste 5 - brown oily liquid level 13 ft from top - 1-2 ft sludge

BSC 1-23-09

1-23-09 BPA

B Craft

0910 CMC using cherry picker & pump to transfer liquids from non-oily water #4 into frac tank FM616 to lower levels & increase freeboard in prep for potential rains

Note: Birmingham Industrial reps (2) onsite for BPA & are currently transferring liquids from solidification pit into frac tank FM616

0920 CMC also closing lids/hatches on frac tanks

0940 START swabbing up level B to collect drum samples for field testing/haz cat and possible lab analyses

1105 START exits drum sampling

0955 D01 - "don't know what this is" (label on blue poly - creamy/milky white gel & liquid - < 1/4 full - North pH = 7

1010 D02 - "don't know what this is" (label on blue poly - clear yellow oil / viscous liquid after

1020 D03 - poly tote w/ clear blue-green liquid pH = 13-14

1030 D04 - CIBA X-Met 1160 in blue poly - red liquid pH = 14

1040 - D05 - black poly - Cawdix Soda pH = 13

BSC 1-23-09

1-23-09 BPA

B Craft

1050 D06 - phosphoric acid in black poly  
pH approx 2-3

1100 D07 - sodium hydroxide in 30-gal poly  
pH = 14

1130 START preparing labels for samples

- picking up FedEx delivery @ hotel

1230 START collects PIT sample from solidification pit ~~near~~ north of influent tanks  
- black/brown sludge

1300 START continues packing samples for delivery by CMC to Test America-Nashville

Note: Birmingham Industrial finished pumping down solidification pit @ approx. 1200

1450 START completes packaging samples & relinquishes to CMC for lab delivery

late note: CMC finished transferring contents of non-oily water #4 into frac tank FM616

- also transferred <sup>some</sup> contents of non-oily water #4 into FM1065 - both

FM616 & 1065 were filled by CMC & Birmingham Industrial reps

- CMC also transferred some contents of oily water #3 into non-oily water #4

1515 START conducting photos doc of site conditions

1550 START offsite

BSC 1-23-09

Feb 9 ISPA

Mon

1100 Left office for Decatur AL  
to meet OSC speculator to observe  
sampling event

1150 START arrives at ISPA, OSC on  
site ~~(A) (B)~~ ~~Odinet~~

Chris representing ISPA is onsite  
& Jiminy Kirkland, Attorney  
from Womble Carlyle Sandridge &  
Rice is onsite. Represents DOW  
~~Peggy~~ Reichold

1200 Bruce Col of GSE is onsite. GSE  
will be sampling today. Two samplers  
from GSE are here to sample tanks  
and will use a peristaltic pump to  
sample

SH60 sample method, + TGP test for  
Decan with Alcon & Methane tracer  
will sample all tank except ones  
with "New Water"

1250 GSE begins sampling SM771

Uses PVC pipe to lower tubing  
from peristaltic pump down to bottom  
while pump is going, tubing is pulled  
up to obtain a relative sample

1322 GSE begins sampling ME5634

Feb 9

Mon

GSE Decons equipment after  
over sample.

1405 GSE Begins sampling EM-1118

1415 OSC Sporlin off site

1420 Around a pool of 07, most of  
the water but here was brought  
to site.

May 7, 07 TSPA was shut down

GSE changed sampling methods from  
peristatic to using a weighted kind  
~~PVC pipe~~ sticking the tubing down

PVC pipe to using a weight on  
the end of tubing on peristatic  
pump and slowly raising the tubing

1430 GSE Begins sampling EM-211

1450 GSE Begins Sampling GS17SD

1520 GSE Samples EM-178

1540 GSE Samples EM-1338

1605 GSE Samples EM-748

1640 GSE Samples GI80C

1715 GSE Samples N4844S, collects  
Field Dup.

1730 GSE, START, Mr Kirkland,  
Mr Delaney off site, START headed  
to office

1805 START at office J. D. S.

Feb 10

Tues

0830 START will be onsite after  
work physical. GSE was to begin  
sampling again at 0800.

1015 START leaves doctors office  
for site

1050 START onsite

GSE has Sampled EM-221

G429D, SG137ST, EM1295, EM138,  
EM622.

1100 GSE will sample EM1288. GSE is  
sampling and filling vials.

1123 GSE collects Sample from N48381

1130 GSE was going to sample tanks  
TR117, EM731, EG21SEA,  
but according to Chris, those tanks  
are no longer out here.

1145 GSE offsite for lunch & to pick up  
Distilled water. START stays onsite.

1245 GSE on site, just sampled N48382  
EM616, EM106S, EM632 are not on  
sample list for GSE.

1320 GSE samples EM610, opened to  
vent, START informed about  
H2S Hit. GSE collects Field dup.

1350 GSE samples N-4411

6

Feb 10

Tues

1410 Sample N48444 is collected  
by GSE

1440 GSE samples FM 843

1500 GSE samples N19410

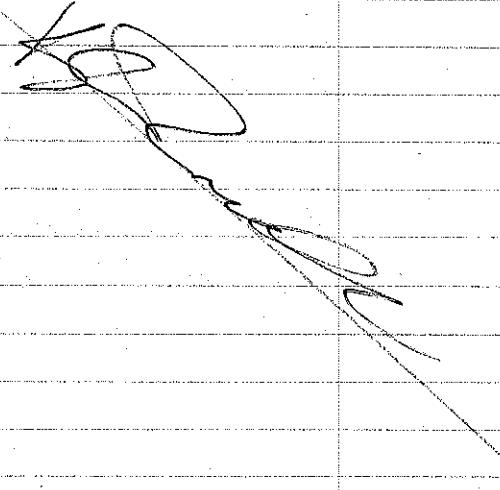

1525 GSE Samples ZS16EA

1545 GSE finishes, Decans equip  
leaves site

1550 Mr Kirkland, Mr Odilest leave  
site START closes gate & leaves  
site for Huntsville

1620 START arrives in Huntsville

If you have received this material in error, please notify us immediately at 615-726-0177.

Additional Laboratory Comments:

\*\*Revised Report 2/06/09\*\*

Added TCLP metals to NSA1639-04 and NSA1639-06 per client request. Replaces report dated 2/04/09 at 17:27.

\*\*Revised Report 2/04/09\*\*

Added Acrylonitrile per client request. Replaces report dated 2/04/09 at 12:49.  
The Chain(s) of Custody, 4 pages, are included and are an integral part of this report.

These results relate only to the items tested. This report shall not be reproduced except in full and with permission of the laboratory.

All solids results are reported in wet weight unless specifically stated.

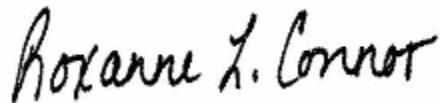

Estimated uncertainty is available upon request.

This report has been electronically signed.

## TCLP REGULATORY LIMITS

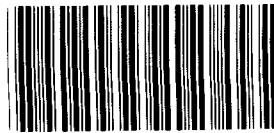

<u>Analyte</u>	<u>Regulatory Limit</u>
1,1-Dichloroethene	0.7
1,2-Dichloroethane	0.5
1,4-Dichlorobenzene	7.5
2,4,5-Trichlorophenol	400
2,4,6-Trichlorophenol	2
2,4-Dinitrotoluene	0.13
2-Butanone	200
Arsenic	5
Barium	100
Benzene	0.5
Cadmium	1
Carbon Tetrachloride	0.5
Chlorobenzene	100
Chloroform	6
Chromium	5
Cresol(s)	200
Hexachlorobenzene	0.13
Hexachlorobutadiene	0.5
Hexachloroethane	3
Lead	5
Mercury	0.2
Nitrobenzene	2
Pentachlorophenol	100
Pyridine	5
Selenium	1
Silver	5
Tetrachloroethene	0.7
Trichloroethene	0.5
Vinyl chloride	0.2

Client	CMC, Inc. (7908)	Work Order:	NSA1639
	1151 Jessamine Station Road	Project Name:	Biological Processors of Alabama

## DATA QUALIFIERS AND DEFINITIONS

<b>CF6</b>	Results confirmed by reanalysis.
<b>CSTM</b>	>200
<b>HTI</b>	The holding time for this test is immediate. The laboratory measurement, therefore, may not be suitable for compliance purposes.
<b>I</b>	Internal Standard recovery was outside of method limits. Matrix interference was confirmed by reanalysis.
<b>L</b>	Laboratory Control Sample and/or Laboratory Control Sample Duplicate recovery was above the acceptance limits. Analyte not detected, data not impacted.
<b>L2</b>	Laboratory Control Sample and/or Laboratory Control Sample Duplicate recovery was below acceptance limits.
<b>M2</b>	The MS and/or MSD were below the acceptance limits due to sample matrix interference. See Blank Spike (LCS).
<b>M7</b>	The MS and/or MSD were above the acceptance limits. See Blank Spike (LCS).
<b>M8</b>	The MS and/or MSD were below the acceptance limits. See Blank Spike (LCS).
<b>MNR1</b>	There was no MS/MSD analyzed with this batch due to insufficient sample volume. See Blank Spike.
<b>R</b>	The RPD exceeded the method control limit. The individual analyte QA/QC recoveries, however, were within acceptance limits.
<b>RL1</b>	Reporting limit raised due to sample matrix effects.
<b>Z2</b>	Surrogate recovery was above the acceptance limits. Data not impacted.
<b>ZX</b>	Due to sample matrix effects, the surrogate recovery was outside the acceptance limits.
<b>ND</b>	Not detected at the reporting limit (or method detection limit if shown)

## METHOD MODIFICATION NOTES

## COOLER RE

Cooler Received/Opened On: 1/23/09 @ 1638

NSA163C

1. Tracking # \_\_\_\_\_ (last 4 digits, FedEx)

Courier: Walk-in ID: 95610068

2. Temperature of rep. sample or temp blank when opened: 8.4 Degrees Celsius

3. If Item #2 temperature is 0°C or less, was the representative sample or temp blank frozen? YES NO...NA

4. Were custody seals on outside of cooler?

YES...NO...NA

If yes, how many and where: \_\_\_\_\_

5. Were the seals intact, signed, and dated correctly? YES...NO...NA

6. Were custody papers inside cooler? YES...NO...NA

I certify that I opened the cooler and answered questions 1-6 (initial)

7. Were custody seals on containers: YES NO and Intact YES...NO...NA

Were these signed and dated correctly? YES...NO...NA

8. Packing mat'l used? Bubblewrap Plastic bag Peanuts Vermiculite Foam Insert Paper Other None

9. Cooling process: Ice Ice-pack Ice (direct contact) Dry ice Other None

10. Did all containers arrive in good condition (unbroken)? YES...NO...NA

11. Were all container labels complete (#, date, signed, pres., etc)? YES...NO...NA

12. Did all container labels and tags agree with custody papers? YES...NO...NA

13a. Were VOA vials received?

YES...NO...NA

b. Was there any observable headspace present in any VOA vial? YES...NO...NA

14. Was there a Trip Blank in this cooler? YES...NO...NA If multiple coolers, sequence # \_\_\_\_\_

I certify that I unloaded the cooler and answered questions 7-14 (initial)

15a. On pres'd bottles, did pH test strips suggest preservation reached the correct pH level? YES...NO...NA

b. Did the bottle labels indicate that the correct preservatives were used YES...NO...NA

If preservation in-house was needed, record standard ID of preservative used here \_\_\_\_\_

16. Was residual chlorine present? YES...NO...NA

I certify that I checked for chlorine and pH as per SOP and answered questions 15-16 (initial)

17. Were custody papers properly filled out (ink, signed, etc)? YES...NO...NA

18. Did you sign the custody papers in the appropriate place? YES...NO...NA

19. Were correct containers used for the analysis requested? YES...NO...NA

20. Was sufficient amount of sample sent in each container? YES...NO...NA

I certify that I entered this project into LIMS and answered questions 17-20 (initial)I certify that I attached a label with the unique LIMS number to each container (initial)

21. Were there Non-Conformance issues at login? YES...NO Was a PIPE generated? YES...NO...# \_\_\_\_\_

## COOLER RECEIPT FORM

Cooler Received/Opened On: 1/23/09 @ 1638

1. Tracking # \_\_\_\_\_ (last 4 digits, FedEx)

Courier: Walk-in ID: 95610068

2. Temperature of rep. sample or temp blank when opened: 13.1 Degrees Celsius

3. If Item #2 temperature is 0°C or less, was the representative sample or temp blank frozen? YES NO...NA

4. Were custody seals on outside of cooler?

YES...NO...NA

If yes, how many and where: \_\_\_\_\_

5. Were the seals intact, signed, and dated correctly?

YES...NO...NA

6. Were custody papers inside cooler?

YES...NO...NA

I certify that I opened the cooler and answered questions 1-6 (initial) \_\_\_\_\_

SPECIAL INSTRUCTIONS/COMMENTS:  
 WS = Waste Sample  
 Standard Turnaround  
 Level II Data Package

SAMPLES RECEIVED AFTER 3PM OR SATURDAY ARE CONSIDERED AS RECEIVED ON THE NEXT BUSINESS DAY; IF NO TAT IS MARKED ON COC AES WILL PROCEED AS STANDARD TAT.

SAMPLES ARE DISPOSED OF 30 DAYS AFTER COMPLETION OF REPORT UNLESS OTHER ARRANGEMENTS ARE MADE.

MATRIX CODES: A = Air GW = Groundwater SE = Sediment SO = Soil SW = Surface Water W = Water (Banks) DW = Drinking Water (Banks) O = Other (specify) NA = None

PRESERVATIVE CODES: H=+ Hydrochloric acid + ice I = Ice only N = Nitric acid S + I = Sulfuric acid + ice S + M + I = Sodium Bisulfate/Methanol + ice O = Other (specify) NA = None
