Subject:
Summary of Initial Assessment Activities Completed through June 30, 2009
Chicago Central & Pacific Railroad
June 19, 2009 Perryville Derailment (MP 80.1)
Rockford, Illinois

ENVIRONMENTAL

Date:
July 9, 2009

Dear Devin:

Beginning on June 25, 2009 and continuing through June 30, 2009, ARCADIS completed fifty five (55) soil borings, two (2) hand augers, and six (6) temporary monitoring wells at the Chicago Central & Pacific Railroad (CC&P) 6/19/09 Rockford (Perryville), Illinois Derailment located at mile post 80.1 in Rockford, Illinois (the Site) (Figure 1). The purpose of this letter is to summarize the soil and groundwater sampling completed and present preliminary results.

On June 25, 2009, ARCADIS met with Boart Longyear onsite (drilling subcontractor to ARCADIS) to perform an emergency utility locate with J.U.L.I.E. member utilities. Representatives from Nicor, AT&T, and local water and sewer utilities met at the Site to locate any underground utilities in the investigation area. All utilities were clearly marked with appropriate paint and/or marking flags.

On June 26, 2009, subsurface investigation activities were initiated as outlined in the United States Environmental Protection Agency (U.S. EPA) approved Initial Field Sampling Plan dated June 25, 2009 prepared by ARCADIS. A U.S. EPA START contractor (Weston) provided oversight during investigation activities. Fifty five (55) soil borings (SB-1 to SB-55) were advanced in the five (5) identified investigation areas (tank car staging area and derailment area) using a track-mounted, direct-push (Geoprobe) type drill rig to depths ranging from 5 feet below ground surface (bgs) to 30 feet bgs. Each soil boring was continuously sampled with a five-foot macrocore sampling device. Soil borings were described by an ARCADIS geologist using the

United Soil Classification System (USCS) and each two foot interval was field screened for volatile organic compounds with a photoionization detector (PID) equipped with a 10.6 eV lamp and with a flame ionization detector (FID).

A minimum of one (1) discrete soil sample from each soil boring from 0 to 2 feet bgs was submitted for laboratory analysis. Additional soil samples from above the water table were collected and submitted for laboratory analysis if field screening results (visual inspection and PID/FID screening) warranted additional sample collection. All soil samples were analyzed for volatile organic compounds (VOCs) using U.S. EPA Method 8260B. Additionally, soil samples from soil borings SB-49 to SB-55 were analyzed for semi-volatile organic compounds (SVOCs) using U.S. EPA Method 8270C.

Due to saturated soils, two proposed soil boring locations were inaccessible to the track mounted Geoprobe drill rig. Hand augers were advanced in these locations to a depth of 2 feet in both locations. Soil samples were collected from the 0 to 2 foot interval from hand auger borings HA-1 and HA-2 for analysis of VOCs by U.S. EPA Method 8260B and SVOCs by U.S. EPA Method 8270C.

All soil samples were submitted to PACE Analytical (PACE), located in Green Bay, Wisconsin, under a 24-hour turn-around time. Samples were transported in coolers with ice via courier to the laboratory using normal chain-of-custody documentation. Sixty one (61) total soil samples were collected during the investigation activities.

Six soil boring locations (SB-1, SB-36, SB-44, SB-48, SB-50, and SB-51) were converted into 2-inch diameter temporary monitoring wells (MW-1 to MW-6, respectively). Temporary monitoring wells were installed using hollow stem auger (HSA) techniques. The temporary monitoring wells were constructed using two-inch diameter PVC well pipe and a ten-foot section of two-inch diameter, 0.010 inch (10 slot) well screen set to intersect the shallow water table. A filter pack consisting of clean quartz sand was placed in the boring annulus to approximately 1.5 to 2 feet above top of the screened interval. Each well location was finished to the surface with bentonite chips which were hydrated with clean water to provide a surface seal. Each monitoring well was developed with a submersible pump by removing a minimum of ten (10) well volumes or purging dry ten (10) times, whichever occurred first.

One soil boring was selected for collection of geotechnical parameters. Soil boring GT-1 was advanced to 15 feet bgs. Soil samples from the 2 to 4 foot and the 10-12

foot intervals were collected for analysis of soil bulk density (ASTM D2937-94), soil particle density (ASTM D854-92), moisture content (ASTM D4959-89, D4643-93, D2216-92, D3017-88), or equivalent U.S. EPA method, organic carbon (ASTM D2974-00), and grain size analysis. Samples were sent to CGC, Inc., of Madison, Wisconsin using normal chain-of-custody documentation.

Each soil boring and temporary monitoring well was located with a global positioning system (GPS). Temporary monitoring wells were surveyed for top of casing elevation with laser surveying equipment relative to a nearby bench mark. The bench mark was identified by Trotter Engineering as a pole on the southeast corner of the intersection between Mulford Road and the Union Pacific Railroad tracks. Locations of soil borings and temporary monitoring wells are depicted on Figure 2.

On June 29 and June 30, 2009, ARCADIS collected groundwater samples from the newly installed temporary monitoring wells. Each temporary monitoring well was gauged with an electronic water level indicator. Temporary monitoring wells were purged of 3 to 5 well volumes of water, or purged dry, prior to collection of groundwater samples. The groundwater samples were retrieved with new dedicated disposable polyethylene bailers. Samples were collected in laboratory-supplied containers and immediately placed on ice for preservation. Samples were transported via courier to PACE in Green Bay, Wisconsin, under a 24-hour turn-around time for analysis of VOCs by U.S. EPA Method 8260B and SVOCs by U.S. EPA Method 8270C.

Results

In the tank car staging area, the geology typically consists of 9 to 11 feet of silty clay or clayey silt that overlies a medium to fine sand. The sand progressively gets finer with depth and silt and clay content also increases with depth. The maximum depth drilled in the tank car staging area was 30 feet bgs. Bedrock was not encountered in the tank car staging area.

In the immediate vicinity of the derailment, the geology typically consists of 10 to 15 feet of silty sandy clay that overlies a medium to fine clayey sand. The sand progressively gets finer with depth and silt and clay content also increases with depth. Bedrock was encountered at depths of 20 to 22 feet bgs in the immediate vicinity of the derailment.

Groundwater was encountered in temporary monitoring wells at elevations ranging from 781.63 to 793.18 feet above mean sea level. In the tank car staging area, groundwater was observed between 5.5 and 6.5 feet bgs. In the immediate vicinity of the derailment, groundwater was observed at depths less than 2 feet bgs.

Groundwater elevations obtained on June 30, 2009 are provided in Table 1.

Groundwater elevation data were used to create a groundwater elevation contour map, which is included as Figure 3. The preliminary gradient calculated for the Site is approximately 0.029 feet/foot toward the southeast.

Soil and groundwater analytical results have been compared to remediation objectives (ROs) set forth in Title 35 Illinois Administrative Code (IAC) Part 742 known as the Tiered Approach to Corrective Action Objectives (TACO) regulations. The exposure scenarios include residential, industrial/commercial, and construction worker receptors as well as groundwater ingestion (including the soil component of groundwater ingestion) remediation objectives for Class I groundwater.

All soil and groundwater results were below applicable Tier 1 remediation objectives with the exception of soil sample SB-51 (0-2'). Acetaldehyde was not detected as a tentatively identified compound (TIC) in any of the analyzed samples. The detected concentration of benzo(a)pyrene (0.317 milligrams per kilogram (mg/kg)) in soil sample SB-51 (0-2') exceeded the Tier 1 remediation objective for benzo(a)pyrene for the residential ingestion pathway of 0.09 mg/kg. However, the Site is located within a metropolitan area as defined in 35 IAC 742 Appendix A, Table H for concentrations of polynuclear aromatic hydrocarbon chemicals in background soils. The background concentration in a metropolitan area for benzo(a)pyrene is 2.1 mg/kg. Therefore, soil sample SB-51 (0-2') does not exceed the background concentration in soil for a metropolitan area and thus by rule does not exceed the residential ingestion pathway.

Preliminary soil and groundwater analytical results are summarized in Tables 2 and 3, respectively.

Please feel free to contact the undersigned if you have any questions or concerns at (312) 263-6703.

Sincerely,

ARCADIS

Todd O'Brien
Project Manager

Notes:

Results are reported in milligrams per kilogram (mg/kg).

% Percent.
 ft-bgs Feet Below Ground Surface.
 J Estimated Value.
 NA Not Analyzed.
 NJ TIC Estimated Value.
 NR Not Reported.
 NS No Standard.
 SB Soil Boring.
 SIM Selected Ion Monitoring.
 SP Soil Pile.
 SVOCs Semi Volatile Organic Compounds.
 TACO Tiered Approach to Corrective Action Objectives.
 TICs Tentatively Identified Compounds.
 VOCs Volatile Organic Compounds.

Values above the TACO Residential Standards are boldfaced.

Values above the TACO Construction Standards are shaded gray.

Values above the TACO Industrial/Commercial Standards are outlined.

Values above the TACO Soil Component of Groundwater Standard is red.

Values above the TACO Metropolitan Area Background Values are outlined.

Notes:

Results are reported in milligrams per kilogram (mg/kg).

% Percent.
 ft-bgs Feet Below Ground Surface.
 J Estimated Value.
 NA Not Analyzed.
 NJ TIC Estimated Value.
 NR Not Reported.
 NS No Standard.
 SB Soil Boring.
 SIM Selected Ion Monitoring.
 SP Soil Pile.
 SVOCs Semi Volatile Organic Compounds.
 TACO Tiered Approach to Corrective Action Objectives.
 TICs Tentatively Identified Compounds.
 VOCs Volatile Organic Compounds.

Values above the TACO Residential Standards are boldfaced.

Values above the TACO Construction Standards are shaded gray.

Values above the TACO Industrial/Commercial Standards are outlined.

Values above the TACO Soil Component of Groundwater Standard is red.

Values above the TACO Metropolitan Area Background Values are outlined.

Notes:															
Results are reported in milligrams per kilogram (mg/kg).															

% Percent.
 ft-bgs Feet Below Ground Surface.

J Estimated Value.

NA Not Analyzed.

NJ TIC Estimated Value.

NR Not Reported.

NS No Standard.

SB Soil Boring.

SIM Selected Ion Monitoring.

SP Soil Pile.

SVOCs Semi Volatile Organic Compounds.

TACO Tiered Approach to Corrective Action Objectives.

TICs Tentatively Identified Compounds.

VOCs Volatile Organic Compounds.

Values above the TACO Residential Standards are boldfaced.

Values above the TACO Construction Standards are shaded gray.

Values above the TACO Industrial/Commercial Standards are outlined.

Values above the TACO Soil Component of Groundwater Standard is **red**.

Values above the TACO Metropolitan Area Background Values are outlined.

Notes:

Results are reported in milligrams per kilogram (mg/kg).

% Percent.
 ft-bgs Feet Below Ground Surface.
 J Estimated Value.
 NA Not Analyzed.
 NJ TIC Estimated Value.
 NR Not Reported.
 NS No Standard.
 SB Soil Boring.
 SIM Selected Ion Monitoring.
 SP Soil Pile.
 SVOCs Semi Volatile Organic Compounds.
 TACO Tiered Approach to Corrective Action Objectives.
 TICs Tentatively Identified Compounds.
 VOCs Volatile Organic Compounds.

Values above the TACO Residential Standards are boldfaced.**Values above the TACO Construction Standards are shaded gray.****Values above the TACO Industrial/Commercial Standards are outlined.**Values above the TACO Soil Component of Groundwater Standard is **red**.

Values above the TACO Metropolitan Area Background Values are outlined.

Notes:

Results are reported in milligrams per kilogram (mg/kg).

% Percent.
 ft-bgs Feet Below Ground Surface.
 J Estimated Value.
 NA Not Analyzed.
 NJ TIC Estimated Value.
 NR Not Reported.
 NS No Standard.
 SB Soil Boring.
 SIM Selected Ion Monitoring.
 SP Soil Pile.
 SVOCs Semi Volatile Organic Compounds.
 TACO Tiered Approach to Corrective Action Objectives.
 TICs Tentatively Identified Compounds.
 VOCs Volatile Organic Compounds.

Values above the TACO Residential Standards are boldfaced.

Values above the TACO Construction Standards are shaded gray.

Values above the TACO Industrial/Commercial Standards are outlined.

Values above the TACO Soil Component of Groundwater Standard is red.

Values above the TACO Metropolitan Area Background Values are outlined.

Notes:

Results are reported in milligrams per kilogram (mg/kg).

% Percent.
 ft-bgs Feet Below Ground Surface.
 J Estimated Value.
 NA Not Analyzed.
 NJ TIC Estimated Value.
 NR Not Reported.
 NS No Standard.
 SB Soil Boring.
 SIM Selected Ion Monitoring.
 SP Soil Pile.
 SVOCs Semi Volatile Organic Compounds.
 TACO Tiered Approach to Corrective Action Objectives.
 TICs Tentatively Identified Compounds.
 VOCs Volatile Organic Compounds.

Values above the TACO Residential Standards are boldfaced.

Values above the TACO Construction Standards are shaded gray.

Values above the TACO Industrial/Commercial Standards are outlined.

Values above the TACO Soil Component of Groundwater Standard is red.

Values above the TACO Metropolitan Area Background Values are outlined.

Notes:

Results are reported in milligrams per kilogram (mg/kg).

% Percent.
 ft-bgs Feet Below Ground Surface.
 J Estimated Value.
 NA Not Analyzed.
 NJ TIC Estimated Value.
 NR Not Reported.
 NS No Standard.
 SB Soil Boring.
 SIM Selected Ion Monitoring.
 SP Soil Pile.
 SVOCs Semi Volatile Organic Compounds.
 TACO Tiered Approach to Corrective Action Objectives.
 TICs Tentatively Identified Compounds.
 VOCs Volatile Organic Compounds.

Values above the TACO Residential Standards are boldfaced.

Values above the TACO Construction Standards are shaded gray.

Values above the TACO Industrial/Commercial Standards are outlined.

Values above the TACO Soil Component of Groundwater Standard is red.

Values above the TACO Metropolitan Area Background Values are outlined.

Notes:

Results are reported in milligrams per liter (mg/L).

MW Monitoring Well.

NA Not Analyzed.

NS No Standard.

TACO Tiered Approach to Corrective Action Objectives.

Values above the TACO Groundwater Class I Standards are boldfaced.

Values above the TACO Groundwater Class II Standards are shaded gray.

Values above the Ethanol Cleanup Objective for Groundwater Class I are outlined.

Values above the Ethanol Cleanup Objective for Groundwater Class II are in red font.
