

Summary of Work Performed
26 June 2009
Mallard North Landfill
Hanover Park, Illinois

The initial leachate elevation at EW-L2 was 12.39 feet below ground surface (bgs). Initial leachate load of approximately 5,000 gallons of leachate was removed by the leachate truck and the leachate elevation immediately after leachate removal was 17.81 feet bgs. Second load of approximately 5,000 gallons were removed and the leachate elevation after removing second leachate load was 17.64 feet bgs. A very strong landfill gas odor was noticed from the leachate well.

RMT continued to weld hose that will be utilized to connect the MH-2 to the frac tank.
