Mills Gap Groundwater Contamination Site

Monthly Progress Report

Reporting Period: October 2009

CERCLA Docket No. CER-04-2004-3755

This monthly report has been prepared in accordance with requirements specified in the Scope of Work (SOW) contained in the Administrative Order on Consent (AOC) for Removal Action issued by the USEPA.

1) Significant developments during the preceding period:

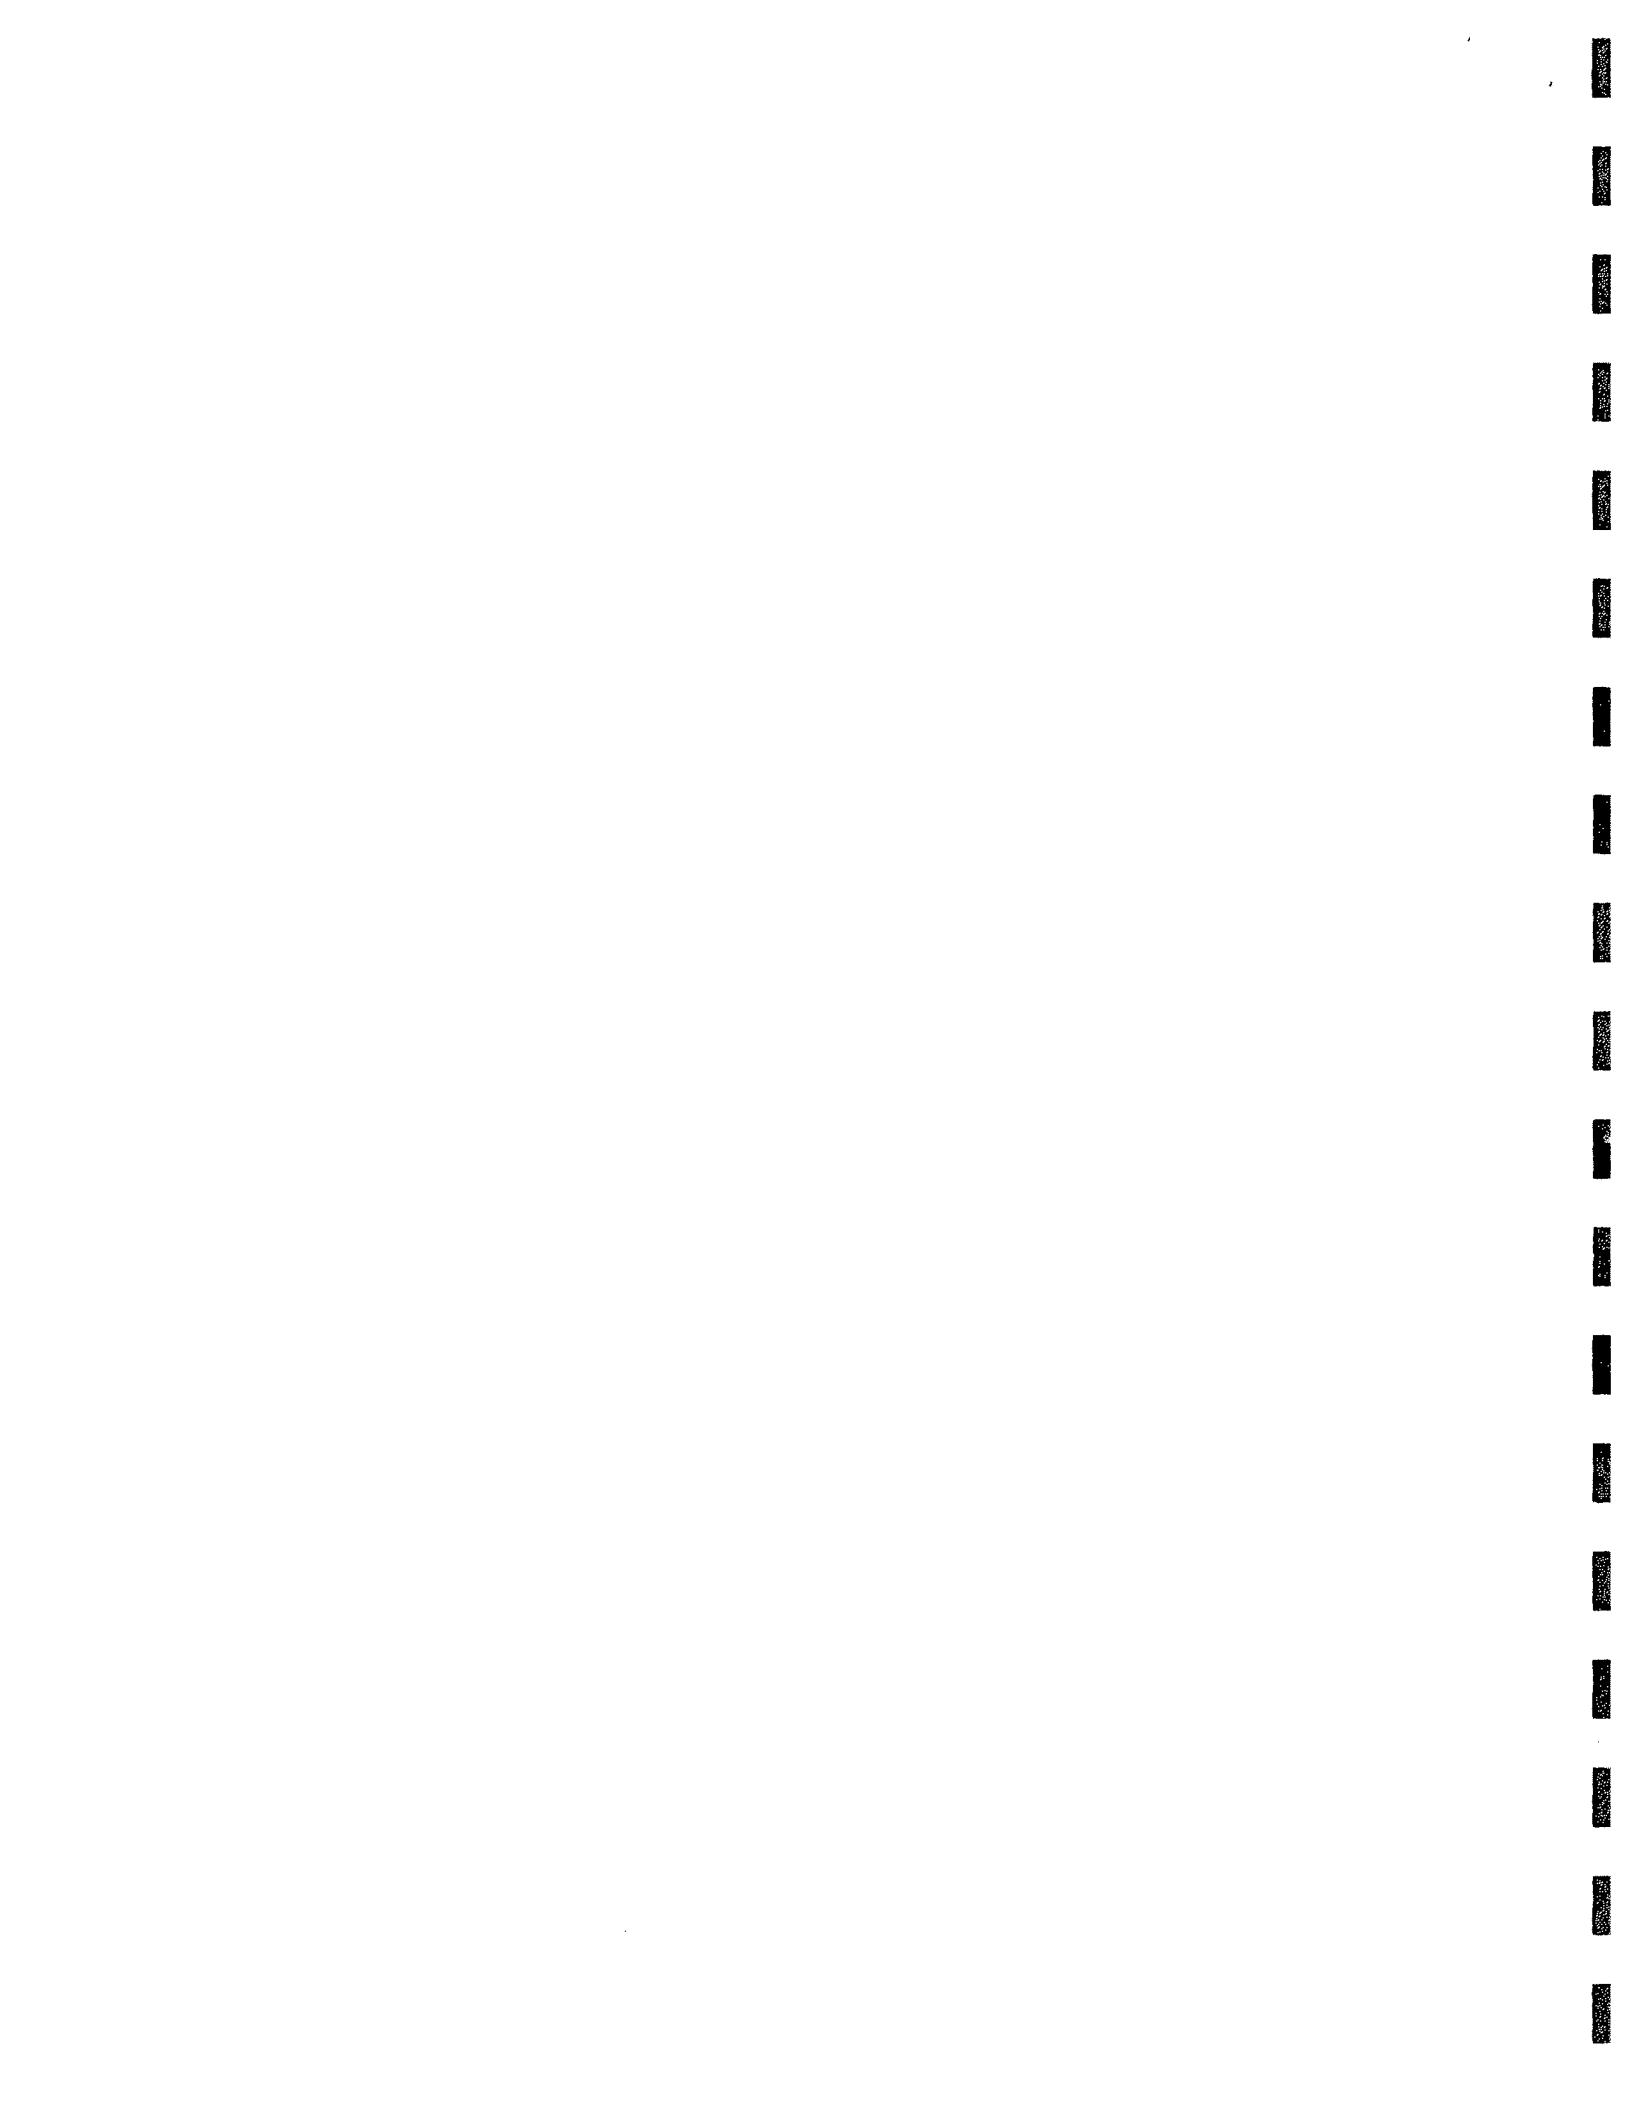

- On October 29, 2009, MACTEC submitted the September 2009 monthly progress report to USEPA.
- Operational and maintenance activities were performed and an air sample was collected from the soil vapor extraction (SVE) system discharge on September 22, 2009. An estimated 70 pounds of volatile organic compounds (VOCs) were removed by the SVE system in September 2009.
- Activities related to implementing the Supplemental Removal Action Plan were performed including collection of monthly pilot study spring and surface water samples and operational and maintenance activities related to the ozone pilot study equipment. The pilot study period was extended.

2) Developments from the present reporting period:

- Operational and maintenance activities were performed and an air sample was collected from the SVE system discharge on October 21, 2009. The SVE system operated for approximately 477 hours during the month of October 2009. An estimated 54 pounds of VOCs were removed by the SVE system in October 2009. There is an overall decreasing concentration trend of VOCs since the system's initial operation, as anticipated. Analytical data from the SVE air discharge sampling performed during the period includes:
 - SGS Environmental Services, Inc. Report G132-2116, dated November 10, 2009 (sample collected October 21, 2009).
- An estimated 6,433 pounds of VOCs have been removed by the SVE system since its initial operation on July 20, 2006.
- The following activities related to implementing the Supplemental Removal Action Plan were performed:
 - Collection of monthly spring and surface water samples; and
 - Operational and maintenance activities related to the ozone pilot study equipment.
- Analytical data from the ozone pilot study received during this period includes:
 - Prism Laboratories, Inc. Report G1009063, dated October 14, 2009. Sample identifications referenced in the laboratory report correspond to the historically-established sampling locations described in previous monthly status reports.

3) Developments anticipated during the next reporting period:

- Monthly scheduled operational and maintenance activities will be performed for the SVE system.
- Monthly air sampling of the SVE system air discharge will be performed.
- Scheduled operational and maintenance activities related to the ozone pilot study will be performed.
- Monthly spring and surface water sampling related to the ozone injection pilot study will be performed.

- The air samples were accepted into the laboratory on October 23rd, 2009 at 1100 for analyses as indicated on the chain of custody. The samples were received in good condition, with an ambient temperature of 18.4°C.
- All extractions and analyses were completed within holding time limits, with the following quality control exceptions.

Volatiles GC/MS Analysis

- Benzene was detected in both the initial and breakthrough sample. It was also detected in the associated method blank at a similar concentration indicating laboratory contamination. Due to sample matrix, a re-analysis was not performed.
