**SAMPLING INVESTIGATION REPORT
MILLS GAP ROAD GROUNDWATER CONTAMINATION SITE
ASHEVILLE, NORTH CAROLINA
SESD PROJECT IDENTIFICATION NUMBER 09-0700**

Introduction

During the week of September 7, 2009 representatives of the United States Environmental Protection Agency (USEPA), Region 4, Science and Ecosystem Support Division (SESD), collected potable water samples from residential wells at the Mills Gap Road Groundwater Contamination Site in Asheville, North Carolina. The investigation was requested by Carolyn Callihan, Remedial Project Manager, Superfund Division, EPA Region 4, Atlanta, Georgia.

The following personnel participated in the investigations:

<u>Name</u>	<u>Organization</u>	<u>Duties</u>
Tim Simpson	Reg. 4 EPA/SESD	Project Leader, Sampler
Linda George	Reg. 4 EPA/SESD	Project Leader, Sampler
Marty Allen	Reg. 4 EPA/SESD	Project Leader, Sampler
Brian Herndon	ILS	FORMs, Sampler
Ryan Stubbs	START Region IV	Sampling Support
Kelly Patten	START Region IV	Sampling Support
Amanda Miolen	START Region IV	Sampling Support

Site Background

The Mills Gap sampling investigation addressed immediate risks associated with volatile organic compound (VOC) contamination in potable wells located near the former CTS Plant. The Plant is located at 275 Mills Gap Road in Asheville, North Carolina (Latitude: 35.4933000, Longitude: -82.5063000).

Trichloroethene (TCE) is the primary contaminant of concern; however, elevated levels of other chlorinated solvents and petroleum constituents have been measured. The former electronics part manufacturing plant is a single building with a nine-acre perimeter fence. Forty-six acres of the original property have been redeveloped into residential properties.

Sampling Investigation Summary

During September 8-10, 2009, SESD collected potable water samples from 34 residential properties. Samples were collected for VOC analyses. Sampling location information is summarized in Table 1.

Prior to sample collection, the potable water was monitored for temperature, specific conductance, pH, and turbidity. The water parameter data are summarized in Table 2.

Analytical data were compared to National Primary Drinking Water Regulations Maximum Contaminant Levels (MCLs) and USEPA Regional Screening Level (RSL) for tap water. MCLs are defined as the highest level of a contaminant level that is allowed in drinking water. MCLs are enforceable standards.

Sampling and Analytical Methodology

Sample collection activities were in accordance with the *Quality Assurance Project Plan, Mills Gap Road Groundwater Contamination Site, September 2009* and EPA, Region 4 *SESD Field Branches Quality System and Technical Procedures*. The field investigation was conducted in accordance with the following procedures:

- SESDPROC-005-R1, Sample and Evidence Management
- SESDPROC-100-R2, Field pH Measurement
- SESDPROC-101-R2, Field Specific Conductance
- SESDPROC-102-R2, Field Temperature Measurement
- SESDPROC-103-R2, Field Turbidity
- SESDPROC-110-R2, Global Positioning System
- SESDPROC-010-R3, Logbooks
- SESDPROC-209-R1, Packing, Marking, Labeling, and Shipping of Environmental and Waste Samples

All samples were analyzed at the SESD laboratory in Athens, GA. Analyses were in accordance with the U.S. EPA, Region 4, *Analytical Support Branch Laboratory Operations and Quality Control Manual*, January 2009. The analytical method was EPA Method 8260C.

Analytical Results: VOCs

Analytical data are summarized in Table 3. A total of four VOCs were detected in twelve samples collected during the sampling event. Chloromethane was detected in three samples ranging from 0.14J ug/L to 0.18J ug/L. The level detected was below the chloromethane RSL of 190 ug/L. For samples collected at Station MGPW113, chloromethane was detected in the primary sample collected at that station but not detected in the quality control split sample.

Dichlorodifluoromethane (Freon 12) was detected in three samples ranging from 0.35J ug/l to 1.4 ug/L. The level detected was below the dichlorodifluoromethan RSL of 390 ug/L.

Methyl tert-butyl ether (MTBE) was detected in two samples ranging from 0.13J ug/l to 0.15J ug/L. The level detected was below the MTBE RSL of 12 ug/L. MTBE is a

member of a group of chemicals commonly known as fuel oxygenates. Oxygenates are added to fuel to increase its oxygen content.

Chloroform was detected in four samples ranging from 0.14J ug/L to 0.34J ug/l. The levels of the chloroform detected in the four samples are below the 80 ug/L MCL for Total trihalomethanes (TTHMs). MCLs for the individual TTHM analytes do not exist. Two samples exceeded the 0.19 ug/L RSL for chloroform. Samples MG100909 (0.24 ug/L) and MG122909 (0.34J ug/L) exceeded the chloroform RSL for tap water.

No other VOCs, including TCE, were detected in any of the samples.

Quality Assurance Results

Quality assurance (QA) samples in the form of split samples (samples MG103909D and MG113909D) and trip blanks were collected during the sampling investigation.

Overall, the analytical results for the split samples compare well with the results reported for the primary sample. Chloromethane was detected in primary sample MG113909 (0.14J ug/L); however, it was not detected (0.05U ug/L) in the split sample (MG113909D). No other VOCs were detected in either the primary or split samples.

VOCs were not detected in either of the three trip blanks. This indicates that there was no cross contamination of the samples during the sampling event.

SUBJECT: FINAL Analytical Report
Project: 09-0700, Mills Gap Road Groundwater Contamination
Superfund Remedial

FROM: Kristin Trapp
OCS Chemist

THRU: Sallie Hale, Chief
ASB Organic Chemistry Section

TO: Timothy Simpson

Attached are the final results for the analytical groups listed below. These analyses were performed in accordance with the Analytical Support Branch's (ASB) Laboratory Operations and Quality Assurance Manual (ASB LOQAM) found at www.epa.gov/region4/sesd/asbsop. Any unique project data quality objectives specified in writing by the data requestor have also been incorporated into the data unless otherwise noted in the Report Narrative. Chemistry data have been verified based on the ASB LOQAM specifications and may have been qualified if the applicable quality control criteria were not met. For a listing of specific data qualifiers and explanations, please refer to the Data Qualifier Definitions included in this report. The reported results are representative only of the samples as received by the laboratory.

Sample Disposal Policy

Because of the laboratory's limited space for long term sample storage, our policy is to dispose of samples on a periodic schedule. Please note that within 60 days of this memo, the original samples and all sample extracts and/or sample digestates will be disposed of in accordance with applicable regulations. The 60-day sample disposal policy does not apply to criminal samples which are held until the laboratory is notified by the criminal investigators that case development and litigation are complete.

These samples may be held in the laboratory's custody for a longer period of time if you have a special project need. If you wish for the laboratory to hold samples beyond the 60-day period, please contact our Sample Control Coordinator, Debbie Colquitt, by e-mail at Colquitt.Debbie@epa.gov, and provide a reason for holding samples beyond 60 days

D.A.R.T. Id: 09-0700

Project: 09-0700, Mills Gap Road Groundwater Contamination - Reported by Kristin Trapp

DATA QUALIFIER DEFINITIONS

- U The analyte was not detected at or above the reporting limit.
- J The identification of the analyte is acceptable; the reported value is an estimate.
- Q-2 Result greater than MDL but less than MRL.
- QC-1 Analyte concentration low in continuing calibration verification standard
- QC-3 Analyte calibration criteria not met
- QL-1 Laboratory Control Spike Recovery less than method control limits
- QM-1 Matrix Spike Recovery less than method control limits
- QM-3 Matrix Spike Precision outside method control limits
- QR-1 MRL verification recovery less than lower control limits.

ACRONYMS AND ABBREVIATIONS

- CAS Chemical Abstracts Service

Note: Analytes with no known CAS identifiers have been assigned codes beginning with "E", the EPA ID as assigned by the EPA Substance Registry System (www.epa.gov/srs), or beginning with "R4-", a unique identifier assigned by the EPA Region 4 laboratory.
- MDL Method Detection Limit - The minimum concentration of a substance (an analyte) that can be measured and reported with a 99% confidence that the analyte concentration is greater than zero.
- MRL Minimum Reporting Limit - Analyte concentration that corresponds to the lowest demonstrated level of acceptable quantitation. The MRL is sample-specific and accounts for preparation weights and volumes, dilutions, and moisture content of soil/sediments.
- TIC Tentatively Identified Compound - An analyte identified based on a match with the instrument software's mass spectral library. A calibration standard has not been analyzed to confirm the compound's identification or the estimated concentration reported.
