**1.1.1 Incident Category**

Time-Critical Removal Action: Manufacturing/Processing/Maintenance – Electroplating, Metal Finishing

**1.1.2 Site Description**

See Initial Polrep.

**1.1.2.1 Location**

The Baycote Metal Finishing Site is located at 1302 Industrial Drive in Mishawaka, St. Joseph County, Indiana 46544. The geographical coordinates for the Site are 41°39'0.03" North latitude and 86°09'57.11" West

longitude. The Site is bordered by industrial properties to the north, east, and south and Industrial Drive and industrial properties to the west. Residential properties are located approximately 700 feet to the west. Seven churches and two schools are located within 1 mile of the Site. The St. Joseph River, a major surface water body that terminates in Lake Michigan, is located 0.85 mile northwest of the Site.

#### 1.1.2.2 Description of Threat

See Initial Polrep.

#### 1.1.3 Preliminary Removal Assessment/Removal Site Inspection Results

See Initial Polrep.

## 2. Current Activities

### 2.1 Operations Section

#### 2.1.1 Narrative

In a letter dated November 11, 2011, the St. Joseph County Health Department (SJCHD) requested assistance from the U.S. EPA to secure hazardous wastes left on-site. SJCHD was concerned that the Site posed a significant threat to the health and safety of companies within the industrial park as well as the residential area located less than a 1,000 feet from the facility. On February 23, 2012, the Director of U.S. EPA's Superfund Division approved an Action Memorandum for a time-critical removal action at the Baycote Metal Finishing Site.

On April 6, 2012, U.S. EPA issued a Unilateral Administrative Order to the potentially responsible parties to conduct a removal action at the Site. The potentially responsible parties presented and inability to pay argument and indicated that they did not intend to conduct a removal action at the Site. EPA began time-critical removal actions at the Baycote Site on May 29, 2012. EPA de-mobilized from site during the winter months and remobilized to the Site on March 18, 2013.

#### 2.1.2 Response Actions

Please refer to previous Polreps for response actions prior to March 25, 2013. During this reporting period, EPA conducted the following activities:

- ERRS removed the roof to Area W. Scrap metal was placed into a roll-off for recycling. Debris including fiberglass insulation, foam, and rubber coating was placed into a non-hazardous roll-off for disposal. See the waste disposal information listed below.
- Two 20,000 gallon frac tanks were mobilized to site. One frac tank is being utilized to store RCRA non-hazardous waste liquids (this tank is located on the Southside of the building). The other tank is storing RCRA hazardous waste liquids (cadmium, chromium) and is located on the east side of Area U adjacent to the loading dock.
- Additional samples of liquids and solids were collected for disposal characterization. Several aqueous samples indicated the presence of RCRA metals (cadmium, chromium) above RCRA regulatory levels. The presence of reactive waste was not documented. Solid sample results are pending.
- ERRS pumped liquids from Tanks W-12, W-13, W-19, W-20, W-26 through 30, W-15, W-16, and W-18 into the appropriate frac tank.
- Waste from Tank W-22 was removed and the solids staged for sampling / disposal.
- Solids located in Tank W-13 were solidified with corn cob / cement, the waste was removed, and the tank was demolished.
- Solids located in Tank W-12 were solidified with corn cob / cement.
- ERRS cleaned the trench system in Area W and plugged the drains into the pit system with hydraulic concrete. The trench was backfilled with clean gravel.
- ERRS disassembled / cleaned the equipment associated with the wastewater treatment system.
- An updated Contingency Plan was developed and distributed. The plan can be located in the Documents Section of the website.
- EPA and its contractors implemented Green Practices onsite (double sided printing, Culligan water service / dedicated water bottles, dedicated steel toed Chem boots, city electrical power, CFL bulbs, etc...). To date approximately 139,700 pounds of scrap steel has been recycled. EPA also provided a pallet of thirty eight 50-pound bags of Alka40 (Calcium Hydroxide) for reuse to the US Ecology facility. Water service / reusable dedicated water bottles saved approximately 3,100 disposable water bottles.

#### 2.1.4 Progress Metrics

Waste Staged for Disposal as of April 5:

30-cubic yard roll-off	Solid waste debris (non-hazardous waste)
9,600 gallons (Frac tank)	Non-hazardous waste liquids
6,400 gallons (Frac tank)	Hazardous waste liquids (water contaminated with cadmium, chromium)

**Waste Disposal Information Table:**

<b>Waste Stream</b>	<b>Date</b>	<b>Quantity</b>	<b>Manifest #</b>	<b>Treatment</b>	<b>Disposal facility</b>
Solid Waste Debris	6/6/12	30 Cubic yards (CY)	001		WM Landfill Wyatt IN

## 2.2 Planning Section

### 2.2.1 Anticipated Activities

#### 2.2.1.1 Planned Response Activities

Planned removal activities on Site included:

1. Inventory and perform hazard categorization on substances contained in vats, pits, drums, and other containers;
2. Perform sampling and analysis to determine disposal options.
3. Continue to consolidate and package hazardous substances, pollutants, and contaminants for transportation and off-site disposal;
4. Dismantle and decontaminate process equipment and building components associated with the plating areas, as necessary;
5. Transport and dispose of all characterized or identified hazardous substances, pollutants, or contaminants to a RCRA/CERCLA-approved disposal facility in accordance with U.S. EPA Off-Site Rule (40 CFR § 300.440).
6. Take any other response actions to address any release or threatened release of a hazardous substance, pollutant and contaminant that the U.S. EPA OSC determines may pose an imminent and substantial endangerment to the public health or the environment.

#### 2.2.1.2 Next Steps

Continue to assess/implement safe options to access / remove wastes remaining on site. Obtain disposal options for solids.

### 2.2.2 Issues

Several above ground storage tanks (Tanks W-26 through 30) are listing; I-beams supporting the tanks above containment pit(s) are severely deteriorated. A stable work area (location of Pits W-19 and 20) is required to remove a catwalk, remove tanks W-26 through 30 and assess/access wastes located below grade.

## 2.3 Logistics Section

NA

## 2.4 Finance Section

### 2.4.1 Narrative

ERRS and START costs for the removal and emergency response actions will be incorporated into the project budget. For accounting purposes, the response costs will be tracked in separate subtask.

#### Estimated Costs \*

	Budgeted	Total To Date	Remaining	% Remaining
<b>Extramural Costs</b>				
ERRS - Cleanup Contractor	\$1,600,000.00	\$1,275,000.00	\$325,000.00	20.31%
START	\$252,500.00	\$193,500.00	\$59,000.00	23.37%
<b>Intramural Costs</b>				
<b>Total Site Costs</b>	\$1,852,500.00	\$1,468,500.00	\$384,000.00	20.73%

\* The above accounting of expenditures is an estimate based on figures known to the OSC at the time this report was written. The OSC does not necessarily receive specific figures on final payments made to any contractor(s). Other financial data which the OSC must rely upon may not be entirely up-to-date. The cost accounting provided in this report does not necessarily represent an exact monetary figure which the government may include in any claim for cost recovery.

## 2.5 Other Command Staff

### 2.5.1 Safety Officer

The Health and Safety Plan was approved and signed by all site personnel.

### 2.5.2 Liaison Officer

NA

### 2.5.3 Information Officer:

Community Involvement Coordinator: Ginny Narsete

## 3. Participating Entities

### 3.1 Unified Command

NA

### 3.2 Cooperating Agencies

IDEM

City of Mishawaka

St. Joseph County Health Department

Mishawaka Fire Department

ATSDR

Federal Occupational Health

South Bend HazMat

## 4. Personnel On Site

The following numbers of personnel were On-Site during the reporting period:

Organization	Position	# Personnel
EPA	OSC	1
ERRS	Response Manager	1
	Chemist	0
	Foreman	0
	Laborer	2
	Field Cost	0
