**Site Description**

Refer to Previous POLREP for Site Description.

**Current Activities**

Refer to POLREP #2 for activities conducted prior to October 2004.

**Planned Removal Actions**

Between October and December, 2004, the FOSC assigned to oversee the cleanup effort met on several occasions with CTDEP and RP representatives at the Site to ascertain the effectiveness of the ongoing cleanup. Based on the findings from those visits, it appears the emergency has been successfully abated and there is no further discharge or substantial threat of a continuous discharge of oil to tributary navigable waters.

Any long term remediation activities deemed necessary to address any remaining oil/contamination which does not present a direct discharge or substantial threat of discharge to a navigable waterway will be performed solely at the discretion of CTDEP.

The cleanup effort conducted, to date, appears to be not inconsistent with OPA and NCP.

**Next Steps**

CTDEP indicated it will continue to work with the RP to address any post-cleanup issues. NPFC was updated on removal activities and EPA's recommendation to closeout the PRFA for this cleanup.
