Site Description
Site Location

The Facemate Site, located at 5 West Main Street in the city of Chicopee, Hampden County, Massachusetts, includes 7 buildings, used for various stages of textile manufacturing, on an L-shaped area of 19.25 acres. It is bordered on the north and west by the Chicopee River, on the south by the Chicopee Industrial Park(former Uniroyal Complex), on the southeast by mixed residential and commercial area, and on the east by commercial property. Multiple family dwellings, apartments, and condominiums are located within 200 feet of the area. Adjacent to the river and the Site are two water treatment pump stations and a flood-control dam.

The Site is not fully secure, only partially fenced-in, and hazardous materials are present in 3 of the buildings. The area was used by Facemate Corporation to process and finish cotton fabrics (i.e., bleaching, dyeing, resin coating, fire retardant coating) until November 2003, when the company shut down operations due to bank foreclosure procedures and left the Site unoccupied. Oil on the Site was used as either fuel for the plant boiler or lubricants for machinery used in the mill. Bleaches, starches, dyes, acids, and resins were used in the cloth processing and finishing. Chlorinated solvents were used in the mill's machine shops. Tanks, vats, drums, and other containers of hazardous substances remain in these buildings. Friable asbestos has been identified in several of the buildings, especially in the boiler room of the main mill building, and a debris pile of asbestos shingles and siding has been identified outside one of the buildings. The Site has been abandoned since March 2004 without electricity, heat, water, or fire protection utilities.

Current Activities
Activities since the last POLREP

During the reporting period of this POLREP (3/28/05 - 5/5/05), the primary activities included the cleaning of the tanks that were previously identified by ERRS and placing all material generated into 55-gallon drums, and deconning all equipment in preparation for demobilization activities.

In addition to the drum, container, vat and tank work that has been going on by ERRS throughout the reporting period, the following activities have occurred:

· On 3/28/2005, an ERRS subcontractor completed lab packing activities.

· On 4/4/2005, an ERRS subcontractor began the ACM removal of the boiler room and the removal of ACM located on the floors of the Site. Subcontractor was on site daily until ACM removal activities were completed.

· On 4/11/2005 and 4/18/2005, an ERRS subcontractor continued load out activities of the staged materials.

· On 4/26/2005, an ERRS subcontractor completed containment barrier encapsulating the ACM surrounding the large holding vats and completed the ACM removal activities for the Site.

· On 4/27/2005, an ERRS subcontractor completed load out of all remaining staged materials on site.

· On 4/28/2005, all site activities were completed and all personnel demobilized from the Site.

· On 5/5/2005, the ERRS Removal Manager completed demobilizing all of the equipment on the Site.

· On 6/16/2005, a final walk of the Site was conducted by the OSC, the ERRS Removal Manager, the property owner, and reps from the MA DEP and Chicopee Fire Dept.

* The above accounting of expenditures is an estimate based on figures known to the OSC at the time this report was written. The OSC does not necessarily receive specific figures on final payments made to any contractor(s). Other financial data which the OSC must rely upon may not be entirely up-to-date. The cost accounting provided in this report does not necessarily represent an exact monetary figure which the government may include in any claim for cost recovery.
