Completion Date:	2/5/2006	Incident Category:	
CERCLIS ID #:		Contract #	
RCRIS ID #:		Reimbursable Account #	None
FPN#	None		

Site Description

At 0700 hours on 03-FEB-06, a facility operator discovered a release of gasoline from the loading area at the facility. Facility personnel calculated that 5,000 gallons of gasoline had been released. The product had migrated off-site into a swamp area located about 600 yards from the Okatoma River. The PRP initiated their Emergency Response Plan and brought four contractors on-site to help with the response. MDEQ SOSOC Shirley and EPA FOSC Russell responded.

Current Activities

The PRP's contractors removed all visible free product. Due to the complexity associated with the removal of the petroleum contaminated soil, the PRP tilled in "oil gator" and will submit a removal plan to MDEQ.

Booms and underflow dams were incorporated to ensure that the product did not reach the nearby creek.

Planned Removal Actions

A removal plan will be submitted to MDEQ. MDEQ will oversee the cleanup/removal activities.

Next Steps

NFA by the EPA.

Key Issues

None at this time.
