

**United States Environmental Protection Agency
Region V
POLLUTION REPORT**

Date: Thursday, September 7, 2006

From: Anita Boseman

To: David Chung, U.S. EPA-HQ Mike Joyce, U.S. EPA
Kevin Houppert, IDEM Pam Thevenow, Marion County Health Dept.
Jordan Wipf, ENTACT

Subject: Continuation of PRP Removal Action

American Lead Site
2101 Hillside Avenue, Indianapolis, IN

POLREP No.:	26	Site #:
Reporting Period:	7/25-8/18/06	D.O. #:
Start Date:	5/5/2005	Response Authority:
Mob Date:	5/5/2005	Response Type:
Demob Date:		NPL Status:
Completion Date:		Incident Category:
CERCLIS ID #:		Contract #:
RCRIS ID #:		

Site Description

The former American Lead facility is located at 2102 Hillside Avenue, Indianapolis, Indiana. American Lead operated a lead smelter at this location from 1946 to 1965. In 1965, National Lead Industries, Inc. (NL Industries) acquired the property and operated a lead reclamation facility. A fire reportedly damaged the smelter building in 1970 and NL Industries removed several buildings and slag piles in 1971. After several different owners, Irving Materials, Inc., (IMI) acquired the facility in 1990. The southeastern part of the facility was formerly leased to DuraCrete and is currently leased to Adjustable Forms, Inc., a manufacturer of building products (ESE 1999).

The facility is located in a mixed residential and industrial area. During the period of lead smelting operations, lead fumes and dust would have been released from the facility as point and fugitive sources and may have contributed to lead contamination at the facility and the surrounding areas. Investigations performed by the facility contractor and the Indiana Department of Environmental Management (IDEM) found lead contamination in residential and non-residential soils surrounding the facility. On March 13, 2003, IDEM requested assistance from U.S. EPA Region 5 Emergency Response Branch for a removal assessment because of failed negotiations with the PRP to reach a compromise on the remedial aspect of the project. U.S. EPA's negotiations with the PRP resulted in an administrative order that required the PRP to characterize lead contamination in the surrounding areas of the facility (off-site) and remediate lead contaminated soil.

Current Activities

- EPA is addressing access at properties where AGC is unable to contact resident. EPA is attempting to get a court order for access. Fifteen properties still need access agreements signed.
- AGC currently has signed access agreements for 221 properties, 1 property has a verbal denial. Of those 221, 12 had XRF lead readings below the cleanup action level of 400 ppm. 210 properties would have to be partially or completed remediated.
- ENTACT has excavated 92 vacant properties, 8 churches, and 101 residential properties to date, 16 vacant lots, 2 church and 25 residential properties were excavated during the reporting period.
- ENTACT disposed of 8,670 tons of non-hazardous lead-contaminated soil during the reporting period.
- ENTACT collected 19 vacant lot, 2 church and 26 residential post-excavation confirmation samples during the reporting period.
- ENTACT has backfilled 90 vacant lots, 8 churches and 97 residential properties to date, 12 vacant lots, 2 churches and 15 residential properties during the reporting period.
- ENTACT has placed sod/seed on 85 vacant/side lots, 8 churches and 86 residential properties to date, 23 residential, 2 churches and 18 vacant lot properties had sod/seed placed during this reporting period.
- ENTACT conducted daily air monitoring near residential entrance (if applicable) and up and down wind of every excavation area. Exceedances were not reported during this reporting period.

Planned Removal Actions

- 1) EPA to work on access agreements to properties where owners can not be contacted.
- 2) Continue backfilling excavated properties after confirmation sampling has been completed.
- 3) Treatment, if needed, and disposal of lead-contaminated soil to the Clinton County Landfill.
- 4) Proceed with shut down awaiting court order for access.

Next Steps

- 1) Complete backfill and restoration of excavated properties, and temporary demobilization.
- 2) Remobilize to finish 23 remaining properties once court order has been issued.

Key Issues

Awaiting court order for access to 15 remaining properties.

Disposition of Wastes

To date approximately 18,200 tons of non-hazardous lead-contaminated soil was disposed of to the Clinton County Landfill during 2005 activities. Approximately 24,446 tons of non-hazardous lead-contaminated soil has been disposed of to the Clinton County Landfill during 2006 activities.
