

**United States Environmental Protection Agency**  
**Region III**  
**POLLUTION REPORT**

**Date:** Friday, May 30, 2003

**From:** Marcos Aquino

**Subject:** Chillum PERC

5901 Eastern Avenue, Washington, DC

Latitude: 38.9617400

Longitude: -76.9972400

<b>POLREP No.:</b>	7	<b>Site #:</b>	a3q3
<b>Reporting Period:</b>	5/15-30/2003	<b>D.O. #:</b>	
<b>Start Date:</b>	3/14/2002	<b>Response Authority:</b>	CERCLA
<b>Mob Date:</b>		<b>Response Type:</b>	
<b>Demob Date:</b>		<b>NPL Status:</b>	Non NPL
<b>Completion Date:</b>		<b>Incident Category:</b>	Removal Assessment
<b>CERCLIS ID #:</b>	a3q3	<b>Contract #</b>	
<b>RCRIS ID #:</b>			

**Site Description**

EPA has been asked to investigate tetrachloroethylene (PERC) contamination in Hyattsville (Chillum), Maryland and Washington, District of Columbia. PERC contamination was discovered during an on-going investigation of a gasoline-products release from a service station located in Hyattsville near the Chillum Perc property. The site under investigation includes a dry cleaning facility and a residential community. The dry cleaning facility is located in Maryland and is immediately adjacent to the Washington, DC border. Groundwater flow flows from Maryland into Washington, DC, and one or more plumes of groundwater containing PERC may be present beneath the local residential community.

**Current Activities**

A. May 16-30, 2003: No on-site activities were conducted during this period. START continued preparation of the work plan for field activities scheduled for summer 2003.

**Next Steps**

A. The expanded scope of work includes but is not limited to the installation of "nested" permanent soil vapor implants and pre-packed one-inch microwells, sampling of soil vapor using active techniques, and sampling and laboratory analyses of groundwater, sump water (where present), tap water, and indoor air (using SUMMA™ canisters). In addition, the Emergency Response Team's (ERT) Trace Atmospheric Gas Analyzer (TAGA) will be utilized to conduct real-time screening of specific individual homes and analyze active soil vapor samples. Sampling locations will be selected based on a risk-based assessment of previously collected data. The expedited sampling event conducted on April 14-15, 2003, during which SUMMA™ canisters were placed in the homes of two residences is also part of this most recent scope of work. The two residences were selected based on an exceedance of the short-term soil screening level for PERC in soil vapor samples collected from beneath the basement slabs. Though no analytical data were collected from the adjoining residences of each duplex at which a short-term exceedance was encountered, EPA and START will collect samples from these residences since the each side of the duplex shares the same basement slab. Field exercises are planned for July/August, 2003.

B. Attend public meetings and prepare presentations of completed, on-going, and planned activities in response to the PERC release.

C. Prepare sampling and analysis plan for expanded work.

D. Forward analytical results of PERC data collected by Chevron to residents. During any correspondence between EPA and individual residents, resident personal privacy will be maintained at all times.
