Site Description

The facility was known to use chromated copper arsenate (CCA) to treat fence rails and mine lumber. RCRA had notified the facility regarding the proper disposal of CCA tanks located on-site, but residual product remains on-site with the potential to affect groundwater in the surrounding community.

Current Activities

OSC and START met with RP to discuss upcoming site sampling.

Next Steps

A Sampling and analysis Plan will be generated and applied to this site.

It is anticipated that the Sampling Plan will be completed by 1-31-07, with field sampling beginning 3-1-07
