POLLUTION REPORT

Date: Monday, February 26, 2007

From: Jeffery Crowley

To: Matt Taylor, EPA Region 4

Subject: Initial and Final POLREP

Sylva Mystery Spill

Sylva, NC

Latitude: 35.3497000

Longitude: -83.2061000

POLREP No.:	1	Site #:	
Reporting Period:	2/22/2007	D.O. #:	
Start Date:		Response Authority:	OPA
Mob Date:	2/22/2007	Response Type:	Emergency
Demob Date:	2/22/2007	NPL Status:	Non NPL
Completion Date:		Incident Category:	Removal Assessment
CERCLIS ID #:		Contract #	
RCRIS ID #:		Reimbursable Account #	
FPN#			

Site Description

In the evening hours of February 21, 2007 the Jackson County EMA office in Sylva, NC received calls regarding a gasoline smell coming from Mill Creek. The EMA hired a cleanup contractor who put boom in the creek to stop the flow of the gasoline downstream. The NC RRT also responded and conducted a hazcat ID test on the product in the creek and found it also contained manganese chloride.

The source of the spill was undertermined and OSC Crowley was dispatched to the scene for oversight and to help determine the source of the spill.

Current Activities

The OSC arrived on scene at 10:30 on 2/22/07 and met up with NCDENR (UST section), Jackson County EMA, and NCEMA. Upon arriving at the scene there was boom placed in the creek and at points downstream to about a mile away. There was gasoline retained in the first boom of about 1'-2' feet by 5' wide. The previous night the NC RRT also was at the scene to conduct a hazcat ID on the gasoline and had a positive hit for manganese chloride (via vapor analysis).

The main concern was that the source of the spill had not been determined. However, the size of the gasoline retained at the main boom location was not increasing, which leads to this being a one time discharge. The OSC along with the state and local responders walked the creek (upstream) to try and find the source. There was no staining along the creek banks and no further gasoline smell at any location other than the main boom location. The group eventually ended up at a large construction site where a very large culvert was being placed and this was the last place the NCRRT got a positive vapor hit for manganese chloride. Again there was no visual signs of gasoline or manganese chloride.

Planned Removal Actions

It was the opinion of all of the responders that this was most likely a one-time release of gasoline and manganese chloride. It was also determined by the UST representative from NCDENR that there was no leaking UST (the only gas station in the area checked their tanks and found them not to be leaking). The Jackson County EMA's cleanup contractor, Mountain Environmental, will monitor and replace the boom in the creek for the next week or so to see if in fact the spill is ongoing or just a one-time event. Also, NCDENR Department of Water Quality will periodically check the Site.

Next Steps

Mountain Environmental will maintain a watch over the creek and cleanup any gasoline that collects at boom locations.

OSC Crowley demobilized the afternoon of 2/22/2007.

Estimated Costs *

	Budgeted	Total To Date	Remaining	% Remaining
Extramural Costs				
Intramural Costs				
Total Site Costs	\$0.00	\$0.00	\$0.00	0.00%

* The above accounting of expenditures is an estimate based on figures known to the OSC at the time this report was written. The OSC does not necessarily receive specific figures on final payments made to any contractor(s). Other financial data which the OSC must rely upon may not be entirely up-to-date. The cost accounting provided in this report does not necessarily represent an exact monetary figure which the government may include in any claim for cost recovery.
