Current Activities

Between September 24 and October 3, U.S. EPA completed transportation and disposal of contaminated soil, and site restoration.

The lead contaminated soil failed Toxicity Characteristic Leaching Procedure (TCLP) for lead and was shipped to EQ/MD in Belleville, Michigan as a hazardous waste. The arsenic contaminated soil passed TCLP and was shipped to Delta Landfill as nonhazardous.

As noted previously, U.S. EPA initiated and completed the excavation of Areas 1 and 2 to remove direct contact threats. Approximately 1,000 yards were removed.

Planned Removal Actions

None

Key Issues

U.S. EPA's emergency response addressed the direct contact threat. Additional investigations may be needed to determine if lead continues under the stamp sand's cover as well as below Torch Lake sediments.

Disposition of Wastes

Waste Stream	Quantity	Manifest #	Disposal Facility
Lead Contaminated Soil	905.5 tons		EQ 49350 N Interstate 94 Servic Belleville, MI 48111
Arsenic Contaminated Soil	64.69 tons		Delta County Landfill 5701 19th Avenue North Escanaba, MI 49829
