Current Activities

During this reporting period approximately 29 gals of oil and 761 gals of contaminated water were retrieved. The new updated totals are now as of December 31, 2007: 4,315 gals of oil and 46,824 gals of contaminated water. The increase in product recovery is probably due to the low water table due to minimal precipitation.

No monitoring of soils was conducted this reporting period. Soil gas is monitored monthly at each of the 14 monitoring point locations. The data indicate that oxygen is readily being consumed within the treatment area.

No problems were encountered during this reporting period.

* The above accounting of expenditures is an estimate based on figures known to the OSC at the time this report was written. The OSC does not necessarily receive specific figures on final payments made to any contractor(s). Other financial data which the OSC must rely upon may not be entirely up-to-date. The cost accounting provided in this report does not necessarily represent an exact monetary figure which the government may include in any claim for cost recovery.
