Demob Date:		NPL Status:	Non NPL
Completion Date:		Incident Category:	Removal Action
CERCLIS ID #:	MNN000509136	Contract #	
RCRIS ID #:			

Site Description

See previous PolReps.

Current Activities

As of September 15, 2008, 15 residential properties with acute arsenic levels have been remediated. As in the previous years, excavation of arsenic contaminated soils from affected residential properties was to a 12 inches depth. Properties are then backfilled with screened top soils, and hydroseeded by a landscaping contractor. Please see the Images Section.

Planned Removal Actions

Complete excavation and backfill of the impacted properties, and get them restored.

Next Steps

This project is listed on the National Priorities List. Therefore, the Remedial Program will come in and address about 500 properties with chronic arsenic levels.

Key Issues

There are a number of properties that have not respond to our request for access. Others with access agreements already in place, are ignoring our phone messages, and flyers, regarding the scheduling of the clean up. We asked for assistance from the City of Minneapolis, and the Minnesota Department of Health, to contact these home owners, some of them rental properties, and get them to agree to the clean up.

We have enough work for one more week only. After that our crews will be demobilized.

Disposition of Wastes

Arsenic Contaminated Soils

Waste Stream	Quantity	Manifest #	Disposal Facility
Arsenic Contaminated Soils	888.11 Tons		Elk River Landfill
